Schedule cancer screenings

MSK offers expert care at each of our locations, including walk-in mammograms at the Ralph Lauren Center (RLC).

[Learn more about RLC](#)

Our care team uses the latest digital equipment for breast exams. We make sure you feel comfortable while getting clear and accurate pictures of your breasts. MSK's expert breast imaging radiologists may also recommend more imaging tests to get a better picture of your breasts. They may also do an image-guided biopsy to confirm a diagnosis. This is when pictures are used to guide us to the right spot of your breast to take a sample for testing.

MSK's [breast cancer screening guidelines](#) recommend that most people assigned female at birth get a mammogram every year starting at age 40. If you are at high risk for breast cancer, we recommend you start screening earlier.
