[Give to MSK](#)

Short-term projects include, but are not limited to, protocol design, grant applications, and statistical analysis. We also provide randomized treatment allocations in collaboration with the Pharmacy.

Our biostatisticians are members of multi-disciplinary research teams. We firmly believe that collaborative support and the development of methodological innovations go hand in hand. Many staff members pursue research interests in statistical methodology. Our interests span cancer prevention, diagnosis and treatment (clinical trials) as well as specialized research in survival analysis, statistical genetics, and computer, intensive methods.
