development, research study assistant and support staff training, and results dissemination. The PRO-CEL Core aims to (1) provide research consultation support and training in the selection and/or design of specific patient-reported outcome (PRO) survey tools, as well as measures to collect data from other key stakeholders (e.g., caregivers, physicians, nurses, community members at high risk of cancer); (2) assist investigators in the design, implementation and analysis of all aspects of qualitative research; (3) support MSK investigators who wish to incorporate PRO, qualitative, and/or community engagement research methods into peer-reviewed funding applications; and (4) provide methodological support for clinical trial, behavioral, and population-based research that seeks to engage community or underrepresented populations.
