

BCG Vaccine (Immunization)

This information from Lexicomp[®] explains what you need to know about this medication, including what it's used for, how to take it, its side effects, and when to call your healthcare provider.

What is this drug used for?

- It is used to prevent TB (tuberculosis).
- It may be given to your child for other reasons. Talk with the doctor.

What do I need to tell the doctor **BEFORE** my child takes this drug?

- If your child is allergic to this drug; any part of this drug; or any other drugs, foods, or substances. Tell the doctor about the allergy and what signs your child had.
- If your child has any of these health problems: TB (tuberculosis), cancer, a fever, a weak immune system, or a disease that may cause a weak immune system like HIV infection.

- If a family member has had immune system problems.
- If your child has recently had or will be getting another live vaccine.
- If your child is taking any drugs to suppress the immune system. This may be certain doses of steroids like prednisone. There are many drugs that can suppress the immune system. Ask your child's doctor or pharmacist if you are not sure.
- If your child has bone marrow disease from chemo or radiation.

If your child is pregnant or breast-feeding a baby:

- Do not give this drug to your child during pregnancy.
- Talk with the doctor if your child is breast-feeding a baby or plans to breast-feed a baby.

This is not a list of all drugs or health problems that interact with this drug.

Tell the doctor and pharmacist about all of your child's drugs (prescription or OTC, natural products, vitamins) and health problems. You must check to make sure that it is safe to give this drug with all of your child's other drugs and health problems. Do not start, stop, or change the dose of any drug your child takes without checking with the doctor.

What are some things I need to know or do while my child takes this drug?

- Tell all of your child's health care providers that your child is taking this drug. This includes your child's doctors, nurses, pharmacists, and dentists.
- This drug may affect certain lab tests. Tell all of your child's health care providers and lab workers that your child takes this drug.
- This drug may not protect all people who use it. Talk with the doctor.
- Very bad bone problems have happened with this drug. This can happen from 4 months to 2 years after the vaccine is received. Rarely, this has been deadly. Talk with the doctor.

What are some side effects that I need to call my child's doctor about right away?

WARNING/CAUTION: Even though it may be rare, some people may have very bad and sometimes deadly side effects when taking a drug. Tell your child's doctor or get medical help right away if your child has any of the following signs or symptoms that may be related to a very bad side effect:

- Signs of an allergic reaction, like rash; hives; itching; red, swollen, blistered, or peeling skin with or without

fever; wheezing; tightness in the chest or throat; trouble breathing, swallowing, or talking; unusual hoarseness; or swelling of the mouth, face, lips, tongue, or throat.

- Flu-like signs lasting for more than 2 days.
- Bone pain.
- High fever.
- Redness, pain, or swelling where the shot was given that lasts more than 2 to 3 days.
- Skin ulcers.

What are some other side effects of this drug?

All drugs may cause side effects. However, many people have no side effects or only have minor side effects. Call your child's doctor or get medical help if any of these side effects or any other side effects bother your child or do not go away:

- Flu-like signs. These include headache, weakness, fever, shakes, aches, pains, and sweating. Mild pain drugs may help.
- Feeling tired or weak.
- Swollen gland.
- Irritation where the shot is given.

- Small red bumps may appear where the shot was given within 10 to 14 days. Most of the time, these may grow to be the biggest after 4 to 6 weeks. By 6 months, there usually is not a sign that a shot was given. Call your doctor right away if you have a reaction other than this or one that is not normal.

These are not all of the side effects that may occur. If you have questions about side effects, call your child's doctor. Call your child's doctor for medical advice about side effects.

You may report side effects to your national health agency.

How is this drug best given?

Give this drug as ordered by your child's doctor. Read all information given to you. Follow all instructions closely.

- The vaccine will be spread on the skin, and the skin will be pierced with a special device.
- Keep the site dry and loosely covered for 24 hours.

What do I do if my child misses a dose?

- Call your child's doctor to find out what to do.

How do I store and/or throw out this drug?

- If you need to store this drug at home, talk with your child's doctor, nurse, or pharmacist about how to store it.

General drug facts

- If your child's symptoms or health problems do not get better or if they become worse, call your child's doctor.
- Do not share your child's drug with others and do not give anyone else's drug to your child.
- Keep all drugs in a safe place. Keep all drugs out of the reach of children and pets.
- Throw away unused or expired drugs. Do not flush down a toilet or pour down a drain unless you are told to do so. Check with your pharmacist if you have questions about the best way to throw out drugs. There may be drug take-back programs in your area.
- Some drugs may have another patient information leaflet. If you have any questions about this drug, please talk with your doctor, nurse, pharmacist, or other health care provider.
- If you think there has been an overdose, call your poison control center or get medical care right away.

Be ready to tell or show what was taken, how much, and when it happened.
