What is it?

Moringa is a small, fast-growing tree. Its leaves, flowers, seeds, and roots are used in traditional medicine to treat different issues.

Moringa leaves and seeds are ground to make a powder. The powder is made into capsules and tablets. You can also mix moringa powder with liquids and drink it.

What are the potential uses and benefits?

Moringa is used:

- To treat infections.
- To treat diabetes.
- To lower high cholesterol levels.

Moringa has other uses, but doctors haven't studied them to see if they work.

It's generally safe to eat moringa leaves, seeds, and to drink moringa powder mixed with liquids. Talk with your healthcare provider before taking moringa supplements. Herbal supplements are stronger than the herbs you would use in cooking.

Supplements can also interact with some medications and affect how they work. For more information, read the "What else do I need to know?" section below.

What are the side effects?

Side effects have not been reported.

What else do I need to know?

- Talk with your healthcare provider if you're pregnant or breastfeeding. Moringa may not be safe for you.

If you have any questions, contact a member of your care team directly. If you're a patient at MSK and you need to reach a provider after 5 p.m., during the weekend, or on a holiday, call 212-639-2000.

For more resources, visit www.mskcc.org/pe to search our virtual library.
