About Your Bladder Surgery With a Neobladder

This guide will help you prepare for your bladder surgery at Memorial Sloan Kettering (MSK). It will also help you understand what to expect during your recovery.

Read through this guide at least once before your surgery and use it as a reference in the days leading up to your surgery.

Bring this guide with you every time you come to MSK, including the day of your surgery. You and your healthcare team will refer to it throughout your care.

Your Care Team

Doctor: ________________________________

Phone number: _________________________

Fax number: ___________________________

Nurse: _________________________________

Call your doctor’s office if you have any questions or concerns.

• Monday through Friday from 9:00 AM to 5:00 PM, call your doctor. You can write their number on the line above.

• After 5:00 PM, during the weekend, and on holidays, call 212-639-2000 and ask to speak to the doctor on call for your doctor.

MSK’s Urgent Care Center (UCC)

If you’re having an urgent medical problem, your doctor may tell you to come to the UCC. The UCC is located on the first floor of Memorial Hospital. The UCC address is:

425 East 67th Street (between York and First Avenues)
New York, NY 10065

Always call your doctor’s office before coming to the UCC.

Your Caregiver

It’s important to choose a person to be your caregiver. They will learn about your surgery with you and help you care for yourself while you’re recovering after surgery. Write down your caregiver’s name below.

Caregiver: ________________________________

About Your Surgery

Your urinary system is made up of organs that make urine and get it out of your body (see Figure 1).

- Your kidneys clean the toxins out of your blood and make urine.
- Your ureters are tubes that carry urine from your kidneys to your bladder.
- Your bladder stores urine until you feel the need to urinate.
- Your urethra is a tube that carries the urine in your bladder out of your body when you urinate.
  - In women, the urethra is very short. It’s located above the vagina.
  - In men, the tube is longer. It passes through the prostate gland and penis.

Removing Your Bladder

Surgery to remove your entire bladder is called a radical cystectomy.

During your surgery, your doctor will remove your bladder and some of the lymph nodes near your bladder. Then, they will rebuild your urinary system.

About Lymph Nodes

Lymph nodes are small, bean-shaped glands that are located throughout your body. They’re part of your lymphatic system, which is part of your body’s immune system. Lymph nodes are removed during your surgery because they may also contain cancer cells.

If you’ve had surgery or radiation therapy to your pelvis in the past, your doctor may remove fewer lymph nodes. This is done to avoid problems after your surgery.
In addition to your bladder and lymph nodes, your doctor may need to remove other organs near your bladder. This is done to make sure all of the cancer is removed.

In men, the following organs may be removed:

- Prostate
- Seminal vesicles
- Part of the vasa deferentia
- Urethra

In women, the following organs may be removed:

- Uterus
- Fallopian tubes
- Ovaries
- Part of the vagina

**Creating Your Neobladder**

After your bladder is removed, your doctor will create a new pouch to hold your urine. This is called a urinary diversion. The type you will have is called a neobladder.

Before your surgery, you and your doctor will talk about which type of urinary diversion may be best for you. However, your doctor will make the final decision during your surgery. Your doctor will talk with you about how they make this decision and why a backup plan is needed.

Your doctor will use a small piece of your small intestine to create your neobladder. One end of your neobladder will be attached to your ureters. The other end will be attached to your urethra. After your surgery, your urine will flow from your kidneys, through your ureters, and into your neobladder.

You will use the muscles in your abdomen to empty your neobladder. This is different from how you empty your natural bladder. Sometimes, you may need to put a catheter through your urethra into your neobladder to completely empty it. You will learn how to do these things after your surgery.

This surgery usually takes about 4 to 7 hours. It may take longer if you have other medical conditions or have had past surgeries.
The information in this section will help you get ready for your surgery.

Read through this section when your surgery is scheduled and refer to it as your surgery date gets closer. It contains important information about what you need to do before your surgery.

Write down any questions you have and be sure to ask your doctor or nurse.
Preparing for Your Surgery

You and your healthcare team will work together to prepare for your surgery.

About Drinking Alcohol

The amount of alcohol you drink can affect you during and after your surgery. It’s important to talk with your healthcare providers about how much alcohol you drink. This will help us plan your care.

- Stopping alcohol suddenly can cause seizures, delirium, and death. If we know you’re at risk for these complications, we can prescribe medications to help prevent them.
- If you drink alcohol regularly, you may be at risk for other complications during and after your surgery. These include bleeding, infections, heart problems, and a longer hospital stay.

Here are things you can do to prevent problems before your surgery:

- Be honest with your healthcare provider about how much alcohol you drink.
- Try to stop drinking alcohol once your surgery is planned. If you develop a headache, nausea, increased anxiety, or can’t sleep after you stop drinking, tell your healthcare provider right away. These are early signs of alcohol withdrawal and can be treated.
- Tell your healthcare provider if you can’t stop drinking.
- Ask us any questions you have about drinking and surgery. As always, all of your medical information will be kept confidential.

About Smoking

People who smoke can have breathing problems when they have surgery. Stopping even for a few days before surgery can help. If you smoke, your nurse will refer you to our Tobacco Treatment Program. You can also reach the program at 212-610-0507.

Help us keep you safe during your surgery by telling us if any of the following statements apply to you, even if you aren’t sure.

- I take a blood thinner. Some examples are aspirin, heparin, warfarin (Coumadin®), clopidogrel (Plavix®), enoxaparin (Lovenox®), dabigatran (Pradaxa®), apixaban (Eliquis®), and rivaroxaban (Xarelto®). There are others, so be sure your doctor knows all the medications you’re taking.
- I take prescription medications (medications prescribed by a doctor), including patches and creams.
- I take over-the-counter medications (medications I buy without a prescription), including patches and creams.
- I take dietary supplements, such as herbs, vitamins, minerals, and natural or home remedies.
- I have a pacemaker, automatic implantable cardioverter-defibrillator (AICD), or other heart device.
- I have sleep apnea.
- I have had a problem with anesthesia (medication to make you sleep during surgery) in the past.
- I am allergic to certain medication(s) or materials, including latex.
- I am not willing to receive a blood transfusion.
- I drink alcohol.
- I smoke.
- I use recreational drugs.
About Sleep Apnea

Sleep apnea is a common breathing disorder that causes a person to stop breathing for short periods of time while sleeping. The most common type is obstructive sleep apnea (OSA). With OSA, the airway becomes completely blocked during sleep. It can cause serious problems during and after surgery.

Please tell us if you have sleep apnea or if you think you might have it. If you use a breathing machine (such as a CPAP) for sleep apnea, bring it with you the day of your surgery.

About Enhanced Recovery After Surgery (ERAS)

ERAS is a program to help you get better faster after your surgery. As part of the ERAS program, it’s important to do certain things before and after your surgery.

Before your surgery, make sure you’re ready by doing the following things:

- **Read this guide.** It will help you know what to expect before, during, and after your surgery. If you have questions, write them down. You can ask your doctor or nurse at your next appointment, or you can call your doctor’s office.
- **Exercise and eat a healthy diet.** This will help get your body ready for your surgery.

After your surgery, help yourself recover more quickly by doing the following things:

- **Read your recovery pathway.** Your nurse will give you a pathway with goals for your recovery. It will help you know what to do and expect on each day during your recovery.
- **Start eating and moving around as soon as you can.** The sooner you’re able to eat, get out of bed, and walk, the quicker you will be able to get back to your normal activities.

Within 30 Days of Your Surgery

Presurgical Testing (PST)

Before your surgery, you will have an appointment for presurgical testing (PST). The date, time, and location of your PST appointment will be printed on the appointment reminder from your doctor’s office.

You can eat and take your usual medications the day of your PST appointment.

During your appointment, you will meet with a nurse practitioner (NP) who works closely with anesthesiology staff (doctors and specialized nurses who will give you anesthesia during your surgery). Your NP will review your medical and surgical history with you. You will have tests, including an electrocardiogram (EKG) to check your heart rhythm, a chest x-ray, blood tests, and any other tests needed to plan your care. Your NP may also recommend you see other healthcare providers.

Your NP will talk with you about which medications you should take the morning of your surgery. It’s very helpful to bring the following things to your PST appointment:

- A list of all the medications you’re taking, including prescription and over-the-counter medications, patches, and creams.
- Results of any tests done outside of MSK, such as a cardiac stress test, echocardiogram, or carotid doppler study.
- The name(s) and telephone number(s) of your doctor(s).
Identify Your Caregiver

Your caregiver plays an important role in your care.

- You and your caregiver will learn about your surgery from your doctor and nurse.
- Your caregiver should be with you when you learn how to care for yourself after surgery. This will make it easier for them to help you at home. They should try to be in the hospital with you between 11:00 AM and 4:00 PM every day.
- Your caregiver will need to take you home after your surgery.

Complete a Health Care Proxy Form

If you haven’t already completed a Health Care Proxy form, we recommend you complete one now. A health care proxy is a legal document that identifies the person who will speak for you if you’re unable to communicate for yourself. The person you identify is called your health care agent.

If you’re interested in completing a Health Care Proxy form, talk with your nurse. If you have completed one already, or if you have any other advance directive, bring it to your next appointment.

Meet With a Wound, Ostomy, and Continence (WOC) Nurse, If Needed

A WOC nurse is a nurse who specializes in caring for wounds, stomas, and other skin issues. They can also help you if you’re having problems with incontinence (not being able to control when you urinate).

Before your surgery, your WOC nurse can talk with you about what to expect when you have a neobladder. They may also mark a site on your abdomen where a stoma may be placed. The site will be the best possible location, away from scars, creases, folds, and if possible, in an area that will make it easy for you to care for it.

Even if your doctor doesn’t think you will need a stoma, they may have your WOC nurse mark a site anyway. This is done in case the surgical plan changes based on findings during your surgery.

Do Breathing and Coughing Exercises

Practice taking deep breaths and coughing before your surgery. You will be given an incentive spirometer to help expand your lungs. For more information, read How to Use Your Incentive Spirometer, located in the “Resources” section of this guide. If you have any questions, ask your nurse or respiratory therapist.

Consider Our Sexual Health Programs

Bladder surgery will affect your sexual health. If you have any concerns about how it will affect you, think about making an appointment with one of our sexual health clinics.

Information for Men

Bladder surgery can cause changes in erectile function (your ability to get and keep an erection). Most men have erectile dysfunction (ED) after surgery. ED is when you have trouble getting or keeping an erection.
Your doctor will talk with you about what to expect about having erections again after surgery. There are many types of treatments for ED, including pills, injections (shots), or a prosthesis (implant). Your doctor can discuss these options with you.

Because your prostate will be removed during your surgery, you won’t be able to father children after your surgery. If you want to have children in the future, you may want to bank your sperm before surgery. Ask your nurse for information about sperm banking if you want to bank your sperm.

To see a specialist in the Male Sexual & Reproductive Medicine Program, call 646-888-6024.

**Information for Women**

If your reproductive organs are removed, you won’t be able to bear children after your surgery. If you want to have children in the future, you may want to think about family planning options (such as egg freezing) before your surgery. Your doctor can discuss these options with you.

You may also have changes in sexual function after your surgery. These may include a shorter vagina and menopause. Menopause is when you no longer have a menstrual period. Your doctor will talk with you about what to expect. They can also discuss your treatment options with you in more detail.

To see a specialist in the Female Sexual Medicine & Women’s Health Program, call 646-888-5076.

**Exercise**

Try to do aerobic exercise every day. Examples of aerobic exercise include walking at least 1 mile (1.6 kilometers), swimming, or biking. If it’s cold outside, use stairs in your home or go to a mall or shopping market. Exercising will help your body get into its best condition for your surgery and make your recovery faster and easier. For more information about exercising, read *General Exercise Program: Level 2*, located in the “Resources” section.

**Eat a Healthy Diet**

Eat a well-balanced, healthy diet before your surgery. If you need help with your diet, talk with your doctor or nurse about meeting with a dietitian.

**10 Days Before Your Surgery**

**Stop Taking Vitamin E**

If you take vitamin E, stop taking it 10 days before your surgery. Vitamin E can cause bleeding. For more information, read *Common Medications Containing Aspirin and Other Nonsteroidal Anti-inflammatory Drugs (NSAIDs)*, located in the “Resources” section.

**Buy Hibiclens® Skin Cleanser**

Hibiclens is a skin cleanser that kills germs for 24 hours after using it (see figure). Showering with Hibiclens before your surgery will help lower your risk of infection after your surgery. You can buy Hibiclens at your local pharmacy without a prescription.
Buy Liquids

You will need to follow a liquid diet before your surgery. Now is a good time to buy your supplies. For a list of liquids you can drink, read the section “Follow a Liquid Diet.”

Do Pelvic Floor Muscle (Kegel) Exercises

Kegel exercises will strengthen your pelvic floor muscles, which will be weakened from your surgery. Your pelvic floor muscles are the muscles you use to stop the stream of urine while you’re urinating. You will use your pelvic floor muscles when you empty your neobladder.

Practice doing Kegel exercises before your surgery so you’ll know how it should feel. Your nurse will give you information about how to do Kegel exercises.

Do not do Kegel exercises while you have a urinary (Foley®) catheter in place.

7 Days Before Your Surgery

Stop Taking Certain Medications

If you take aspirin, ask your doctor if you should keep taking it. Aspirin and medications that contain aspirin can cause bleeding. For more information, read Common Medications Containing Aspirin and Other Nonsteroidal Anti-inflammatory Drugs (NSAIDs), located in the “Resources” section.

Stop Taking Herbal Remedies and Other Dietary Supplements

Stop taking herbal remedies and other dietary supplements 7 days before your surgery. If you take a multivitamin, ask your doctor or nurse if you should keep taking it. For more information, read Herbal Remedies and Cancer Treatment, located in the “Resources” section.

Watch a Virtual Tour

This video will give you an idea of what to expect when you come to Memorial Hospital (MSK’s main hospital) on the day of your surgery.

www.mskcc.org/pe/day-your-surgery

2 Days Before Your Surgery

Stop Taking Certain Medications

Stop taking nonsteroidal anti-inflammatory drugs (NSAIDs), such as ibuprofen (Advil®, Motrin®) and naproxen (Aleve®), 2 days before your surgery. These medications can cause bleeding. For more information, read Common Medications Containing Aspirin and Other Nonsteroidal Anti-inflammatory Drugs (NSAIDs), located in the “Resources” section.
Day Before Your Surgery

**Follow a Liquid Diet**

You will need to follow a liquid diet the day before your surgery. Examples of liquids you can drink are listed in the “Liquid Diet” table. Your doctor or nurse will tell you if you need to start your liquid diet earlier or do any other bowel preparation.

While you’re on this diet:

- Don’t eat any solid foods.
- Try to drink at least 1 (8-ounce) glass of liquid every hour while you’re awake.
- Drink plenty of liquids other than water, coffee, and tea. You can drink liquids of any color.
- Don’t drink sugar-free liquids unless you have diabetes.

### Liquid Diet

• Alcoholic beverages |

**For People With Diabetes**

If you have diabetes, ask the doctor who manages your diabetes what you should do while you’re following a liquid diet.

- If you take insulin or another medication for diabetes, ask if you need to change the dose.
- Ask if you should drink sugar-free liquids.

While you’re following a liquid diet, make sure to check your blood sugar level often. If you have any questions, talk with your healthcare provider.
Note the Time of Your Surgery

A clerk from the Admitting Office will call you after 2:00 PM the day before your surgery. If you’re scheduled for surgery on a Monday, you will be called on the Friday before. If you don’t receive a call by 7:00 PM, please call 212-639-5014.

The clerk will tell you what time to arrive at the hospital for your surgery. Use the area to the right to write down your surgery date and scheduled arrival time.

Surgery date: ____________
Scheduled arrival time:____

The clerk will also tell you where to go. This will be the following location:

Presurgical Center (PSC) on the 6th floor
1275 York Avenue (between East 67th and East 68th Streets)
New York, NY 10065
B elevator to 6th floor

Shower With Hibiclens

The night before your surgery, shower using Hibiclens.

1. Use your normal shampoo to wash your hair. Rinse your head well.
2. Use your normal soap to wash your face and genital area. Rinse your body well.
3. Open the Hibiclens bottle. Pour some solution into your hand or a washcloth.
4. Move away from the shower stream to avoid rinsing off the Hibiclens too soon.
5. Rub the Hibiclens gently over your body from your neck to your feet. Don’t put the Hibiclens on your face or genital area.
6. Move back into the shower stream to rinse off the Hibiclens.
7. Dry yourself off with a clean towel after your shower.
8. Don’t put on any lotion, cream, deodorant, makeup, powder, perfume, or cologne after your shower.

Sleep

Go to bed early and get a full night’s sleep.

Do not eat or drink after midnight.
The Morning of Your Surgery

**Take Your Medications**

If your doctor or NP told you to take certain medications the morning of your surgery, take only those medications with a sip of water. Depending on what medications you take and the surgery you're having, this may be all, some, or none of your usual morning medications.

**Shower With Hibiclens**

Shower using Hibiclens just before you leave for the hospital. Use the Hibiclens the same way you did the night before.

Don't put on any lotion, cream, powder, deodorant, makeup, perfume, or cologne after your shower.

**Things to Remember**

- Wear something comfortable and loose-fitting.
- If you wear contact lenses, wear your glasses instead. Wearing contact lenses during surgery can damage your eyes.
- Don’t wear any metal objects. Remove all jewelry, including body piercings. The equipment used during your surgery can cause burns if it touches metal.
- Don’t put on any lotion, cream, deodorant, makeup, powder, perfume, or cologne.
- Remove nail polish and nail wraps.
- Leave valuable items (such as credit cards, jewelry, and your checkbook) at home.
- Before you're taken into the operating room, you will need to remove your hearing aids, dentures, prosthetic device(s), wig, and religious articles.

Two hours before your scheduled arrival time, drink the ClearFast PreOp® drink your nurse gave you. After you finish the ClearFast, do not eat or drink anything else. This includes water, hard candy, and gum.
What to Bring

- A pair of loose-fitting pants (such as sweat pants).
- Sneakers that lace up. You may have some swelling in your feet. Lace-up sneakers can fit over this swelling.
- Your breathing machine for sleep apnea (such as your CPAP), if you have one.
- Your portable music player, if you choose. However, someone will need to hold it for you when you go into surgery.
- Your incentive spirometer, if you have one.
- Your Health Care Proxy form, if you have completed one.
- Your cell phone and charger.
- This guide. Your healthcare team will use this guide to teach you how to care for yourself after your surgery.

Where to Park

MSK’s parking garage is located on East 66th Street between York and First Avenues. If you have questions about prices, call 212-639-2338.

To reach the garage, turn onto East 66th Street from York Avenue. The garage is located about a quarter of a block in from York Avenue, on the right-hand (north) side of the street. There is a pedestrian tunnel that you can walk through that connects the garage to the hospital.

There are also other garages located on East 69th Street between First and Second Avenues, East 67th Street between York and First Avenues, and East 65th Street between First and Second Avenues.
Once You’re in the Hospital

You will be asked to say and spell your name and birth date many times. This is for your safety. People with the same or a similar name may be having surgery on the same day.

Get Dressed for Surgery

When it’s time to change for surgery, you will get a hospital gown, robe, and nonskid socks to wear.

Meet With Your Nurse

You will meet with your nurse before surgery. Tell them the dose of any medications (including patches and creams) you took after midnight and the time you took them.

Your nurse may place an intravenous (IV) line into one of your veins, usually in your arm or hand. If your nurse doesn’t place the IV, your anesthesiologist will do it later once you’re in the operating room.

Marking Your Surgical Site

In addition to being asked your name and birth date, you may also be asked the name of your doctor, what surgery you’re having, and which side is being operated on. Your doctor or another member of your surgical team will use a marker to initial the site on your body that will be operated on. This is for your safety. We do this to make sure that all members of the surgical staff are clear about the plan for your surgery.

Meet With Your Anesthesiologist

Your anesthesiologist will:

- Review your medical history with you.
- Ask you if you’ve had any problems with anesthesia in the past, including nausea or pain.
- Talk with you about your comfort and safety during your surgery.
- Talk with you about the kind of anesthesia you will receive.
- Answer any questions you may have about your anesthesia.

Your doctor or anesthesiologist may also talk with you about placing an epidural catheter (thin, flexible tube) in your spine (back). An epidural catheter is another way to give pain medication.

Prepare for Your Surgery

Once your nurse has seen you, 1 or 2 visitors can keep you company as you wait for your surgery to begin. When it’s time for your surgery, your visitor(s) will be shown to the waiting area. Your visitors should read Information for Family and Friends for the Day of Surgery, located in the “Resources” section.

You will either walk into the operating room or be taken in on a stretcher. A member of the operating room team will help you onto the operating bed. Compression boots will be placed on your lower legs. These gently inflate and deflate to help blood flow in your legs.

Once you’re comfortable, your anesthesiologist will give you anesthesia through your IV line and you will fall asleep. You will also get fluids through your IV line during and after your surgery.
During Your Surgery

After you're fully asleep, a breathing tube will be placed through your mouth and into your windpipe to help you breathe.

Once your surgery is finished, your incision will be closed with staples, sutures (stitches), or Dermabond® (surgical glue). You will also a bandage over your incision. Your breathing tube is usually taken out while you're still in the operating room.
The information in this section will tell you what to expect after your surgery, both during your hospital stay and after you leave the hospital. You will learn how to safely recover from your surgery.

Write down any questions you have and be sure to ask your doctor or nurse.
In the Post-Anesthesia Care Unit (PACU)

When you wake up after your surgery, you will be in the Post-Anesthesia Care Unit (PACU).

A nurse will be monitoring your body temperature, pulse, blood pressure, and oxygen levels. You may be getting oxygen through a thin tube that rests below your nose or a mask that covers your nose and mouth. You will also have compression boots on your lower legs.

Tubes and Drains

You will have several different types of drainage tubes in your body. Your doctor or nurse will talk with you about what to expect. They will also check off the boxes next to the tubes that you may have.

- **Jackson Pratt® (JP) drain:** This is a small egg-shaped container that’s connected to a tube in the lower part of your abdomen. It drains liquid from your pelvis.
- **Stents:** These are 2 small tubes. They may be in a small opening in your abdomen, or they may be attached to a Foley catheter inside your body. They drain urine from your kidneys.
- **Suprapubic (SP) tube:** This is a tube in the lower part of your abdomen. It drains urine from your neobladder.
- **Foley catheter:** This is a tube in your urethra. It drains urine from your neobladder.

Pain Medication

If you have an epidural catheter, you will get pain medication into your epidural space (the space in your spine just outside your spinal cord). You will be able to control your pain medication using a button called a patient-controlled analgesia (PCA) device. For more information, read *Patient-Controlled Analgesia (PCA)*, located in the “Resources” section.

If you don’t have an epidural catheter, you will get pain medication through your IV line.

Visitors

Your visitors can see you briefly in the PACU, usually within 90 minutes after you arrive there. A member of the nursing staff will explain the guidelines to them.

Moving to Your Hospital Room

You will probably stay in the PACU overnight. After your stay in the PACU, you will be taken to your hospital room.

In Your Hospital Room

The length of time you’re in the hospital after your surgery depends on your recovery. Some people leave after 3 to 4 days, while other people stay longer. Your nurse will teach you how to recover after your surgery.

Read the resource *Call! Don’t Fall!* to learn about what you can do to stay safe and keep from falling while you’re in the hospital. You can find it online at www.mskcc.org/pe/call_dont_fall, or you can ask your nurse.
Moving Around and Walking

Moving around and walking will help lower your risk for blood clots and pneumonia. It will also help stimulate your bowels so they start working again. Your nurse, physical therapist, occupational therapist will help you move around. They will also give you medication to relieve pain.

Try to follow the moving and walking goals below. These goals are also in your recovery pathway.

<table>

Managing Your Pain

You will have some pain after your surgery.

- If you have an epidural catheter, you will get pain medication into your epidural space. You will be able to control your medication using a PCA device.
- If you don’t have an epidural catheter, you will get pain medication in your IV line.
- Once you’re able to eat normal food, you will get oral pain medication (medication you swallow).

Your doctor and nurse will ask you about your pain often and give you medication as needed. If your pain isn’t relieved, tell your doctor or nurse. It’s important to control your pain so you can use your incentive spirometer and move around. Controlling your pain will help you recover better.

If you had a robotic surgery, you may have pain in your shoulder. This is called referred pain. It’s caused by the gas that was put into your abdomen during your surgery, and it’s normal. If you have pain in your shoulder, tell your nurse. They will bring you a hot pack to put on your shoulder to help with the pain.

You will be given a prescription for pain medication before you leave the hospital. Talk with your doctor or nurse about possible side effects and when you should start switching to over-the-counter pain medications.
Exercising Your Lungs

It’s important to exercise your lungs so they expand fully. This helps prevent pneumonia.

- Use your incentive spirometer 10 times every hour you’re awake. For more information, read How to Use Your Incentive Spirometer, located in the “Resources” section.
- Do coughing and deep breathing exercises. A member of your care team will teach you how to do these exercises.

When using your incentive spirometer or doing other breathing exercises, it may help to hold a pillow or blanket against your incision. This will keep your muscles from moving as much.

Eating

You may be able to start drinking liquids the day after your procedure. Depending on how your bowels are working, you will slowly start eating solid foods again over the next few days.

While you’re recovering, your appetite may be smaller than it was before your surgery. Eat several small meals throughout the day instead of 3 large meals. Eating this way will help your digestion and give you energy throughout the day.

Swelling and Discharge

Right after surgery, you may have some swelling in your genitals and groin. You may also have some discharge from your penis or vagina. This is normal. The swelling and discharge should go away over a few weeks.

Showering

You will be able to shower with help 3 days after your surgery.

Learning to Care for Your Neobladder

While you’re in the hospital, your nurse will teach you how to care for your neobladder. They will also teach you how to care for any tubes or drains you will have at home. If your nurse gives you any written information, you can put it in this folder to review when you’re at home.

You will also have a case manager after your surgery. They will work with you to arrange for a home care nurse to visit you after you’re discharged from the hospital.

Getting Your Supplies

Before you leave the hospital, your nurse will give you enough supplies to care for yourself at home for about 3 weeks. They will also give you a list of companies you can contact to order more supplies. The nurse who works with your doctor will also help you order more supplies after you’re discharged.

It’s very helpful if your caregiver also learns how to care for your neobladder. This will make it easier for them to help you at home.

Your caregiver should try to be in the hospital with you between 11:00 AM and 4:00 PM every day.
At Home

A home care nurse will visit you when you’re home from the hospital. They will keep track of how you're recovering. They will also help you practice caring for your neobladder.

The nurse that works with your doctor will call you 1 to 4 days after you’re discharged to see how you’re doing. They will also tell you when to schedule your first appointment.

Read the resource *What You Can Do to Avoid Falling* to learn about what you can do to stay safe and keep from falling at home and during your appointments at MSK. You can find it online at www.mskcc.org/pe/avoid_falling, or you can ask your nurse.

**MedicAlert® Jewelry**

You should always wear a MedicAlert bracelet or necklace that states that you had a cystectomy with orthotopic neobladder. This will help emergency services workers care for you if you're ever seriously ill or hurt and need medical help.

You can buy a MedicAlert bracelet or necklace at most drug stores, or you can ask your nurse for an application. For more information, visit the MedicAlert website at www.medicalert.org.

**Caring for Your Drainage Tube(s)**

You will leave the hospital with 1 or more drainage tubes. The tube(s) will drain urine from your neobladder and help the area heal.

Your neobladder is made out of a piece of your intestine, and your intestine makes mucus. You will need to irrigate the tube(s) in your neobladder before and after you leave the hospital to make sure they don’t get clogged with mucus. Your nurse will teach you how to do this, and a home care nurse will help you after you’re discharged. You will need to irrigate your tube(s) until they’re removed.

After the tube(s) are removed, you’ll see mucus in your urine. This is normal. With time, your neobladder will make less mucus.

**Managing Urinary Leakage (Incontinence)**

You will probably have urinary leakage after your Foley catheter is removed. You will need to use urinary pads or briefs (such as Depends®) for the first few months after surgery.

The leakage will get better over time as your pelvic muscles get stronger. Leakage at night and under stress conditions (such as when you cough, sneeze, or strain) will take longer to stop.

**Strengthening Your Pelvic Muscles**

Start doing pelvic muscle (Kegel) exercises when your Foley catheter is removed. Kegel exercises will help strengthen your pelvic muscles, which will help you control when you urinate. Your nurse will tell you how to do them and give you written instructions.

If you do the Kegel exercises as directed, you will start to have better urinary control during the day in about 2 months. Nighttime control will follow. Talk with your doctor or nurse if the leakage doesn’t get better and is bothering you.
Emptying Your Neobladder

Some people don’t feel any sensation when they need to empty their neobladder. If you do feel a sensation, it will be different than what you felt when you needed to urinate before your surgery. You may feel:

- Pressure
- A sensation of fullness
- Mild cramps in your abdomen

To empty your neobladder:

1. Sit on the toilet.
2. Relax your pelvic floor muscles.
3. Bear down slightly using your abdominal muscles.

This is similar to what you do to have a bowel movement. It’s important to sit while you urinate, even if you’re male, because it will help you relax your pelvic floor muscles.

Your doctor will check to see how well your neobladder is emptying. If it isn’t emptying completely, you may need to catheterize yourself (put a catheter through your urethra into your neobladder) to empty it. Your nurse will show you how to do this.

Urination Schedule

You will need to urinate on a schedule. This will help you keep from overfilling your neobladder. Below is an example of a schedule to empty your neobladder. Your doctor may tell you to follow a different schedule. Follow your doctor’s instructions.

<table>
<thead>
<tr>
<th></th>
<th>Daytime</th>
<th>Nighttime</th>
</tr>
</thead>
<tbody>
<tr>
<td>Week 1</td>
<td>Every 2 to 3 hours</td>
<td>Every 3 to 4 hours</td>
</tr>
<tr>
<td>Week 2</td>
<td>Every 3 to 4 hours</td>
<td>Every 4 to 5 hours</td>
</tr>
<tr>
<td>Week 3</td>
<td>Every 4 to 5 hours</td>
<td>Every 4 to 5 hours</td>
</tr>
<tr>
<td>Week 4</td>
<td>Every 4 to 5 hours</td>
<td>Every 6 hours</td>
</tr>
<tr>
<td>Week 5 and after</td>
<td>Every 4 to 6 hours</td>
<td>Every 6 hours</td>
</tr>
</tbody>
</table>

- At nighttime, set an alarm clock to wake you up once in the middle of the night to empty your neobladder.
- Never go more than 6 hours without emptying your neobladder. Waiting longer than 6 hours can cause your neobladder to become over-stretched. This can damage or burst your neobladder or cause your body to start reabsorbing urine.
- If you have leakage between the times you empty your bladder, go back to the last week’s schedule. Your neobladder may not be able to hold the increased amount of urine.
- If you feel pressure or fullness between the times you’re scheduled to empty your neobladder, urinate before the next scheduled time.
Managing Your Pain

The length of time each person has pain or discomfort varies. You may still have some pain when you go home and will probably be taking pain medication. Some people have soreness, tightness, or muscle aches around their incision for 6 months or longer. This doesn’t mean that something is wrong.

Follow the guidelines below to help manage your pain at home.

• Take your medications as directed and as needed.

• Call your doctor if the medication prescribed for you doesn’t relieve your pain.

• Don’t drive or drink alcohol while you’re taking prescription pain medication.

• As your incision heals, you will have less pain and need less pain medication. An over-the-counter pain reliever such as acetaminophen (Tylenol®) or ibuprofen (Advil®) will relieve aches and discomfort.
  − Follow your doctor or nurse’s instructions for stopping your prescription pain medication.
  − Don’t take more acetaminophen than the amount directed on the bottle or as instructed by your doctor or nurse. Taking too much acetaminophen can harm your liver.

• Pain medication should help you resume your normal activities. Take enough medication to do your exercises comfortably. However, it’s normal for your pain to increase slightly as you increase your level of activity.

• Keep track of when you take your pain medication. It works best 30 to 45 minutes after you take it. Taking it when your pain first begins is more effective than waiting for the pain to get worse.

Pain medication may cause constipation (having fewer bowel movements than what’s normal for you).

Managing Constipation

Talk with your nurse about how to manage constipation. You can also follow the guidelines below.

• Go to the bathroom at the same time every day. Your body will get used to going at that time. However, if you feel the urge to go, don’t put it off.

• Try to use the bathroom 5 to 15 minutes after meals. After breakfast is a good time to move your bowels. The reflexes in your colon are strongest at this time.

• Exercise, if you can. Walking is an excellent form of exercise.

• Drink 8 to 10 (8-ounce) glasses (2 liters) of liquids daily, if you can. Drink water, juices (such as prune juice), soups, ice cream shakes, and other drinks that don’t have caffeine. Drinks with caffeine, such as coffee and soda, pull fluid out of your body.

• Slowly increase the fiber in your diet to 25 to 35 grams per day. If you have an ostomy or have had recent bowel surgery, check with your doctor or nurse before making any changes in your diet. Foods high in fiber include:
  − Bran
  − Whole-grain cereals and breads
  − Unpeeled fruits and vegetables
  − Mixed green salads
  − Apricots, figs, and raisins
• Both over-the-counter and prescription medications are available to treat constipation. Try one of the following over-the-counter medications first. Follow the instructions on the label or from your healthcare provider.
  − Docusate sodium (Colace®): This is a stool softener that causes few side effects. Don’t take it with mineral oil.
  − Polyethylene glycol (MiraLAX®): This is a laxative that causes few side effects. Take it with 8 ounces (1 cup) of a liquid.
  − Senna (Senokot®): This is a stimulant laxative, which can cause cramping. It’s best to take it at bedtime.

For more information, read the resource Constipation. You can find it online at www.mskcc.org/pe/constipation, or you can ask your nurse.

Call your doctor or nurse if you’re not passing gas or if you haven’t had a bowel movement in 3 days.

**Diarrhea and Other Changes in Bowel Function**

When part of your colon is removed, the part that’s left adapts to the change. Your colon will start to adapt soon after your surgery. During this time, you may have gas, cramps, or changes in your bowel habits (such as diarrhea or frequent bowel movements). These changes may take weeks to months to go away.

If you’re having problems with changes in your bowel function, talk with your doctor or nurse. You can also try the tips below.

**Tips for Managing Gas**

If you have gas or feel bloated, avoid foods that can cause gas. Examples include beans, broccoli, onions, cabbage, and cauliflower.

**Tips for Managing Diarrhea**

If you have diarrhea, it’s important to drink at least 8 to 10 (8-ounce) glasses of liquids every day. Drink water and drinks with salt, such as broth and Gatorade®. This will help you keep from becoming dehydrated and feeling weak.

Following the BRATY diet can also help control diarrhea. The BRATY diet is made up mostly of:

• Bananas (B)
• Rice (R)
• Applesauce (A)
• Toast (T)
• Yogurt (Y)

If you’re having diarrhea more than 4 to 5 times a day, or if it smells worse than normal, call your doctor’s office.
**Tips for Managing Soreness**

If you have soreness around your anus:

- Soak in warm water 2 to 3 times a day.
- Apply zinc oxide ointment (such as Desitin®) to the skin around your anus. This helps prevent irritation.
- Don’t use harsh toilet tissue. You can use a nonalcohol wipe (such as a baby wipe) instead.
- Take medication, if your doctor prescribes it.

**Caring for Your Incision**

Take a shower every day to clean your incision. Follow the instructions in the “Showering” section below.

It’s normal for the skin below your incision to feel numb, because some of the nerves were cut. The numbness will go away over time.

Call your doctor’s office if:

- The skin around your incision is very red.
- The skin around your incision is getting more red.
- You see drainage that looks like pus (thick and milky).

If you go home with staples in your incision, they will be removed during your first appointment after surgery. It’s okay to get the staples wet.

**Showering**

*Take a shower every day to clean your incision.*

If you have staples in your incision, it’s okay to get them wet.

Use soap, but don’t put it directly on your incision. Don’t rub the area around your incision. After you shower, pat the area dry with a clean towel. Leave your incision uncovered or cover it with a small bandage if your clothing may rub it (such as the waistline of your pants).

Don’t take a bath for the first 4 weeks after your surgery.

**Eating and Drinking**

You can eat all the foods you did before your surgery, unless your doctor gives you other instructions. Eating a balanced diet with lots of calories and protein will help you heal after surgery. Try to eat a good protein source (such as meat, fish, or eggs) at each meal. You should also try to eat fruits, vegetables, and whole grains.

For more tips on eating more calories and protein, read the resource *Eating Well During and After Your Cancer Treatment*. You can find it online at [www.mskcc.org/pe/eating_cancer_treatment](http://www.mskcc.org/pe/eating_cancer_treatment), or you can ask your nurse.
It's important to drink plenty of liquids. Choose liquids without alcohol or caffeine. Try to drink 8 to 10 (8-ounce) glasses of liquids every day. You should drink enough so that the urine in your pouch is very light yellow or clear. If it becomes dark yellow or orange, you need to drink more.

If you have questions about your diet, ask to see a dietitian.

Activities and Exercise

When you leave the hospital, your incision will look like it's healed on the outside, but it won’t be healed on the inside.

- Don’t lift anything heavier than 10 pounds (about 4.5 kilograms) for at least 6 to 8 weeks after your surgery.
- Don’t do any demanding activities (such as jogging, tennis, or contact sports) for at least 3 months after your surgery.

Doing aerobic exercise, such as walking and stair climbing, will help you gain strength and feel better. Walk at least 2 to 3 times a day for 20 to 30 minutes. You can walk outside or indoors at your local mall or shopping center. For more information, read General Exercise Program: Level 2, located in the “Resources” section.

It's normal to have less energy than usual after your surgery. Recovery time is different for each person. Increase your activities each day as much as you can. Always balance activity periods with rest periods. Rest is an important part of your recovery.

Driving

Ask your doctor when you can drive. Most people can start driving again within 6 weeks after surgery. Don’t drive while you're taking pain medication that may make you drowsy. You can ride in a car as a passenger at any time after you leave the hospital.

Going Back to Work

Having a neobladder shouldn’t stop you from going back to work. Talk with your doctor or nurse about your job and when it may be safe for you to start working again. If your job involves movement or heavy lifting, you may need to stay out a little longer than if you sit at a desk.

Traveling

You will be able to travel. Here are some suggestions for when you travel:

- Bring extra supplies, just in case it’s hard to get them at your destination.
- If you’re taking a plane, train, or bus, carry your supplies with you. Don’t put them in your checked luggage. This will help you be prepared if you're separated from your luggage.

Sexuality

Sexuality includes many aspects of caring and closeness. It isn’t only having sex. You and your partner can build other forms of sexual and emotional expression. Most important, remember that your surgery doesn’t change your feelings for each other. Sexual counseling to talk about these issues can help. Any member of your healthcare team can refer you to counseling.
The American Cancer Society (ACS) offers free booklets on cancer and sexual health called *Sex and the Man With Cancer* and *Sex and the Woman With Cancer*. You can get copies by calling 800-ACS-2345 (800-227-2345) or visiting the ACS website, www.cancer.org.

**MSK’s Male Sexual & Reproductive Medicine Program**

After surgery, men will have erectile dysfunction (ED). There are treatments to help with this. We recommend that men see a specialist in the Male Sexual & Reproductive Medicine Program. You can make an appointment by calling 646-888-6024.

**MSK’s Female Sexual Medicine & Women’s Health Program**

After surgery, women won’t be able to bear children if their reproductive organs were taken out. Some women may also have changes in the structure of their vagina. We recommend that women see a specialist in the Female Sexual Medicine & Women’s Health Program. You can make an appointment by calling 646-888-5076.

**Managing Your Feelings**

After surgery for a serious illness, you may have new and upsetting feelings. Many people say they felt weepy, sad, worried, nervous, irritable, and angry at one time or another. You may find that you can’t control some of these feelings. If this happens, it’s a good idea to seek emotional support.

The first step in coping is to talk about how you feel. Family and friends can help. Your nurse, doctor, and social worker can reassure, support, and guide you. It’s always a good idea to let these professionals know how you, your family, and your friends are feeling emotionally. Many resources are available to you and your family. Whether you’re in the hospital or at home, the nurses, doctors, and social workers are here to help you and your family and friends handle the emotional aspects of your illness.

Many people join one of MSK’s online or in-person bladder cancer support groups. For information about those groups and other resources, such as the Bladder Cancer Advocacy Network (BCAN), read the “Resources” section of this guide.

**Contact your doctor or nurse if you have:**

- A temperature of 101° F (38.3° C) or higher
- Chills
- Any bleeding
- New leakage or drainage from your incision
- More leakage or drainage from your incision
- Pus-like drainage from your incision
- Redness at your incision
- Increased pain
- Nausea or vomiting

- Leg swelling or pain
- Shortness of breath
- Catheter or drainage tubes that are dislodged or not draining
- No bowel movement for more than 3 days
- No gas at all
- Decreased urine output
- Any problems you didn’t expect
- Any questions or concerns

After 5:00 PM, during the weekend, and on holidays, call 212-639-2000. Ask to speak to the doctor on call for your doctor.
This section contains a list of MSK support services, as well as the resources that were referred to throughout this guide. These resources will help you prepare for your surgery and recover safely.

Write down any questions you have and be sure to ask your doctor or nurse.

MSK Resources

Bladder Cancer Support Groups

Bladder Cancer Support Group
646-422-4628 or 646-888-8106
This is a live, in-person support and education group for people who have bladder cancer or who have been treated for bladder cancer. People share their personal experiences and provide practical and emotional support for one another. Discussions are led by a social worker, nurse, and WOC nurse.

This group meets the 2nd Thursday of each month from 12:00 to 1:30 PM. For more information, or to register, call the numbers above or email RLAC@mskcc.org.

Online Bladder Cancer Support Group
This is a live, online support and education group for people undergoing treatment for bladder cancer. People share their personal experiences and provide practical and emotional support for one another. Discussions are led by a social worker and a WOC nurse.

This group meets the 4th Thursday of each month from 4:00 to 5:00 PM. For more information, or to register, email virtualprograms@mskcc.org.

MSK Support Services

Anesthesia
212-639-6840
Call if you have any questions about anesthesia.

Blood Donor Room
212-639-7643
Call for more information if you're interested in donating blood or platelets.

Bobst International Center
888-675-7722
MSK welcomes patients from around the world. If you're an international patient, call for help arranging your care.

Chaplaincy Service
212-639-5982
At MSK, our chaplains are available to listen, help support family members, pray, contact community clergy or faith groups, or simply be a comforting companion and a spiritual presence. Anyone can request spiritual support, regardless of formal religious affiliation. The interfaith chapel is located near Memorial Hospital's main lobby and is open 24 hours a day. If you have an emergency, please call the hospital operator and ask for the chaplain on call.

Counseling Center
646-888-0200
Many people find that counseling helps them. We provide counseling for individuals, couples, families, and groups, as well as medications to help if you feel anxious or depressed.
Female Sexual Medicine & Women’s Health Program
646-888-5076
This program helps female patients who are dealing with cancer-related sexual health challenges, including premature menopause and fertility issues. Call for more information or to make an appointment.

Integrative Medicine Service
646-888-0800
The Integrative Medicine Service offers patients many services to complement (go along with) traditional medical care, including music therapy, mind/body therapies, dance and movement therapy, yoga, and touch therapy.

Look Good Feel Better Program
800-395-LOOK (800-395-5665)
This program offers workshops to learn things you can do to help you feel better about your appearance. For more information or to sign up for a workshop, call the number above or visit the program’s website at www.lookgoodfeelbetter.org.

Male Sexual & Reproductive Medicine Program
646-888-6024
This program helps male patients who are dealing with cancer-related sexual health challenges, including erectile dysfunction. Call for more information or to make an appointment.

Patient and Caregiver Support Program
212-639-5007
You may find it comforting to speak with a cancer survivor or caregiver who has been through a similar treatment. Through our Patient and Caregiver Support Program, you’re able to speak with former patients and caregivers.

Patient Billing
646-227-3378
Call if you have any questions about preauthorization with your insurance company. This is also called preapproval.

Patient Representative Office
212-639-7202
Call if you have questions about the Health Care Proxy form or if you have any concerns about your care.

Perioperative Nurse Liaison
212-639-5935
Call if you have questions about MSK releasing any information while you’re having surgery.

Private Duty Nursing Office
212-639-6892
You may request private nurses or companions. Call for more information.

Resources for Life After Cancer (RLAC) Program
646-888-8106
At MSK, care doesn’t end after active treatment. The RLAC Program is for patients and their families who have finished treatment. This program has many services, including seminars, workshops, support groups, counseling on life after treatment, and help with insurance and employment issues.
Social Work
212-639-7020
Social workers help patients, family, and friends deal with issues that are common for people with cancer. They provide individual counseling and support groups throughout the course of treatment and can help you communicate with children and other family members. Our social workers can also help refer you to community agencies and programs, as well as financial resources if you’re eligible.

Tobacco Treatment Program
212-610-0507
If you want to quit smoking, MSK has specialists who can help. Call for more information.

For more online information, visit LIBGUIDES on MSK’s library website at http://library.mskcc.org or the Bladder Cancer section of www.mskcc.org. You can also call the library reference staff at 212-639-7439 for help.

General Resources

Access-A-Ride
web.mta.info/nyct/paratran/guide.htm
877-337-2017
In New York City, the MTA offers a shared ride, door-to-door service for people with disabilities who can’t take the public bus or subway.

Air Charity Network
www.aircharitynetwork.org
877-621-7177
Provides travel to treatment centers.
American Cancer Society (ACS)
www.cancer.org
800-ACS-2345 (800-227-2345)
Offers a variety of information and services, including Hope Lodge, a free place for patients and caregivers to stay during cancer treatment.

Cancer and Careers
www.cancerandcareers.org
A resource for education, tools, and events for employees with cancer.

CancerCare
www.cancercare.org
800-813-4673
275 Seventh Avenue (Between West 25th & 26th Streets)
New York, NY 10001
Provides counseling, support groups, educational workshops, publications, and financial assistance.

Cancer Support Community
www.cancersupportcommunity.org
Provides support and education to people affected by cancer.

Caregiver Action Network
www.caregiveraction.org
800-896-3650
Provides education and support for people who care for loved ones with a chronic illness or disability.

Corporate Angel Network
www.corpangelnetwork.org
866-328-1313
Offers free travel to treatment across the country using empty seats on corporate jets.

Gilda’s Club
www.gildasclubnyc.org
212-647-9700
A place where men, women, and children living with cancer find social and emotional support through networking, workshops, lectures, and social activities.

Good Days
www.mygooddays.org
877-968-7233
Offers financial assistance to pay for copayments during treatment. Patients must have medical insurance, meet the income criteria, and be prescribed medication that’s part of the Good Days formulary.

Healthwell Foundation
www.healthwellfoundation.org
800-675-8416
Provides financial assistance to cover copayments, health care premiums, and deductibles for certain medications and therapies.

Joe’s House
www.joeshouse.org
877-563-7468
Provides a list of places to stay near treatment centers for people with cancer and their families.
LGBT Cancer Project
http://lgbtcancer.com/
Provides support and advocacy for the LGBT community, including online support groups and a database of LGBT-friendly clinical trials.

LIVESTRONG Fertility
www.livestrong.org/we-can-help/fertility-services
855-744-7777
Provides reproductive information and support to cancer patients and survivors whose medical treatments have risks associated with infertility.

National Cancer Institute (NCI)
www.cancer.gov
800-4-CANCER (800-422-6237)

National Cancer Legal Services Network
www.nclsn.org
Free cancer legal advocacy program.

National LGBT Cancer Network
www.cancer-network.org
Provides education, training, and advocacy for LGBT cancer survivors and those at risk.

Needy Meds
www.needymeds.org
Lists Patient Assistance Programs for brand and generic name medications.

NYRx
www.nyrxplan.com
Provides prescription benefits to eligible employees and retirees of public sector employers in New York State.

Partnership for Prescription Assistance
www.pparx.org
888-477-2669
Helps qualifying patients without prescription drug coverage get free or low-cost medications.

Patient Access Network Foundation
www.panfoundation.org
866-316-7263
Provides assistance with copayments for patients with insurance.

Patient Advocate Foundation
www.patientadvocate.org
800-532-5274
Provides access to care, financial assistance, insurance assistance, job retention assistance, and access to the national underinsured resource directory.

RxHope
www.rxhope.com
877-267-0517
Provides assistance to help people obtain medications that they have trouble affording.
Caring for Your Urinary (Foley) Catheter

This information will help you care for your urinary (Foley®) catheter while you’re at home.

You have had a Foley catheter (a thin, flexible tube) placed in your bladder to drain your urine. It’s held inside your bladder by a balloon filled with water. The parts of the catheter outside your body are shown in Figure 1.

![Diagram of a Foley catheter]

**Figure 1. The parts of your Foley catheter**

**Catheter Care**

You need to perform catheter care every day. This involves cleaning the catheter, changing the drain collection bags, and washing the drainage bags.

You may also find it helpful to watch the video below that shows you how to
change the drainage bags.

Please visit mskcc.org/cancer-care/patient-education/how-change-your-foley-catheter-drainage-bag to watch this video.

Showering

You can shower while you have your Foley catheter. However, do not take a bath until after your catheter is removed. This is because taking a bath while you have the Foley catheter puts you at risk for infections.

Make sure you always shower with your night bag. Do not shower with your leg bag. You may find it more convenient to shower in the morning.

Cleaning Your Catheter

You can clean your catheter while you are in the shower.

You will need the following supplies:

- Mild soap, such as Dove®
- Water
- 1 Cath-Secure®

1. Wash your hands thoroughly with soap and water.
2. Using mild soap and water, clean your genital area.
   - Men should retract the foreskin, if needed, and clean the area, including the penis.
   - Women should separate the labia, and clean the area from front to back.
3. Clean your urethra (urinary opening), which is where the catheter enters your body.
4. Clean the catheter from where it enters your body and then down, away from your body. Hold the catheter at the point it enters your body so that you don’t put tension on it.
5. Rinse the area well and dry it gently.

6. If you removed your old Cath-Secure, use the new Cath-Secure to attach the catheter to your leg to keep it from moving.

**Changing the Drainage Bag**

You will change your drainage bag twice a day.

- In the morning after you shower, change the night bag to the leg bag
- At night before you go to bed, change the leg bag to the night bag

You will need the following supplies:

- A clean washcloth (not one already used for bathing) or a 4” x 4” piece of gauze
- Night or leg drainage bag ( whichever one you are switching to)
- 2 alcohol pads

1. Wash your hands thoroughly with soap and warm water.

2. Empty the urine from the drainage bag into the toilet. Make sure that spout of the drainage bag never touches the side of the toilet or any emptying container.

3. Place the clean cloth or gauze under the connector to catch any leakage.

4. Pinch off the catheter with your fingers and disconnect the used bag.

5. Wipe the end of the catheter with an alcohol pad.

6. Wipe the connector on the new bag with the second alcohol pad.

7. Connect the clean bag to the catheter and release your finger pinch.

8. Check all connections. Straighten any kinks or twists in the tubing.

**Caring for the Drainage Bags**

**Caring for the leg bag**

- Always wear the leg bag below your knee. This will help it drain.
• Keep the leg bag secure with the Velcro® straps. If the straps leave a mark on your leg, they are too tight and should be loosened. Leaving the straps too tight can decrease your circulation and lead to blood clots.

• Empty the leg bag into the toilet through the spout at the bottom every 2 to 4 hours, as needed. Don’t let the bag become completely full.

• Don’t lie down for longer than 2 hours while you are wearing the leg bag.

Caring for the night bag

• Always keep the night bag below the level of your bladder.

• To hang your night bag while you sleep, place a clean plastic bag inside of a wastebasket. Hang the night bag on the inside of the wastebasket.

Cleaning the drainage bags

You will need the following supplies:

• White vinegar

• Cool water

1. Wash your hands thoroughly with soap and warm water.

2. Rinse the bag with cool water. Do not use hot water because it can damage the plastic equipment.

3. To decrease odor, fill the bag halfway with a mixture of 1 part white vinegar and 3 parts water. Shake the bag and let it sit for 15 minutes.

4. Rinse the bag with cool water and hang it up to dry.

Preventing Infection

• Keep the drainage bag below the level of your bladder and off the floor at all times.

• Keep the catheter secured to your thigh to prevent it from moving.

• Don’t lie on your catheter or block the flow of urine in the tubing.

• Shower daily to keep the catheter clean.

• Clean your hands before and after touching the catheter or bag.
**Special Points**

- You may see some blood or urine around where the catheter enters your body, especially when walking or having a bowel movement. This is normal, as long as there’s urine draining into the drainage bag. If there’s not, call your doctor or nurse.

- While you have your catheter, drink 1 to 2 glasses of liquids every 2 hours while you’re awake.

**Call Your Doctor or Nurse Immediately if:**

- Your catheter comes out; do not try to replace it yourself
- You have a temperature of 101° F (38.3° C) or higher
- You are making less urine than usual
- You have foul-smelling urine
- You have bright red blood or large blood clots in your urine
- You have abdominal (belly) pain and no urine in your catheter bag
Common Medications Containing Aspirin and Other Nonsteroidal Anti-inflammatory Drugs (NSAIDs)

This information will help you identify medications that contain aspirin and other nonsteroidal anti-inflammatory drugs (NSAIDs). It’s important to stop these medications before many cancer treatments.

Aspirin, other NSAIDs (such as ibuprofen), and vitamin E can increase your risk of bleeding during cancer treatment. These medications affect your platelets, which are blood cells that clot to prevent bleeding.

Read the section “Examples of Medications” to see if your medications contain aspirin, other NSAIDs, or vitamin E.

If you take aspirin, medications that contain aspirin, other NSAIDs, or vitamin E, tell your doctor or nurse. They will tell you if you need to stop taking these medications before your treatment. You will also find instructions in the information about the treatment you’re having.

Before Your Surgery

If you’re having surgery, follow the instructions below.

- Stop taking medications that contain vitamin E 10 days before your surgery, or as directed by your doctor.

- Stop taking medications that contain aspirin 7 days before your surgery, or as directed by your doctor. If you take aspirin because you’ve had a problem with your heart or you’ve had a stroke, be sure to talk with your doctor.
before you stop taking it.

- Stop taking NSAIDs 48 hours before your surgery, or as directed by your doctor.

**Examples of Medications**

Medications are often called by their brand name, which can make it hard to know their ingredients. To help you identify medications that contain aspirin, other NSAIDs, and vitamin E, please review the lists below.

These lists include the most common products, but there are others. Check with your healthcare provider if you aren’t sure. *Always be sure your doctor knows all of the medications you’re taking, both prescription and over-the-counter (not prescription).*

<table>
<thead>
<tr>

Most multivitamins contain vitamin E. If you take a multivitamin, be sure to check the label.

### About Acetaminophen

Acetaminophen (Tylenol®) is generally safe to take during your cancer treatment. It doesn’t affect platelets, so it won’t increase your chance of bleeding. However, talk with your doctor before taking acetaminophen if you’re getting chemotherapy.

### Medications that Contain Acetaminophen

**Read the labels on all your medications**

Acetaminophen is safe when used as directed, but there’s a limit to how much you can take in 1 day. It’s possible to take too much acetaminophen without knowing because it’s in many different medications.
Make sure to always read and follow the label on the product you’re taking. Acetaminophen is a very common ingredient found in over-the-counter and prescription medications. It’s often an ingredient in pain relievers, fever reducers, sleep aids, and cough, cold, and allergy medications.

The full name acetaminophen isn’t always written out. Look for the common abbreviations listed below, especially on prescription pain relievers.

<table>
<thead>
<tr>
<th>Common Abbreviations for Acetaminophen</th>

<tbody>
<tr>
<td>APAP</td>
</tr>
<tr>
<td>Acetamin</td>
</tr>
</tbody>
</table>

Don’t take more than 1 medication that contains acetaminophen at a time without talking with a member of your healthcare team.
General Exercise Program: Level 2

This information explains Level 2 of a general exercise program that will help you with your physical recovery.

This exercise program works the major muscle groups that you use for everyday activities. Regular exercise with resistance (from gravity, elastic bands, or hand weights) will help you:

- Get back to doing your everyday activities.
- Increase your muscle strength.

You should also do other exercises, such as walking, to help build your strength. Your rehabilitation (rehab) therapist may change your exercise program to meet your needs. Talk with your doctor before you start this program.

Exercise Tips

- Dress comfortably. You should wear clothing that won’t limit your movements. You can wear a hospital gown, pajamas, or athletic clothing.
- Breathe in through your nose and out through your mouth. Do the exercise movements when you breathe out.
- Don’t hold your breath while doing any of these exercises.
- Do some of the exercises in front of a mirror to keep the right form and posture.
- Your therapist may give you an elastic exercise band (Thera-Band®). Use the band for resistance during the exercises. Follow your therapist’s instructions.
- Move slowly through all movements. Slow, controlled movements will:
Use more muscle fibers.

- Strengthen every part of your muscle.
- Put as much effort into releasing from the movement as you did starting it. Do this especially during strengthening exercises.
  - For example, when doing bicep curls, lower your arm as slowly and with as much control as when you lifted it. When you lower your arm in this way, it's called a “lengthening contraction.” This strengthens the muscle more than just doing an upward curl.
- Stop any exercise that causes you pain or discomfort and tell your physical therapist. You can continue to do the other exercises.

Special Instructions

Exercises

Bridging

1. Lie on your back with both knees bent and your feet on the bed. Keep your arms at your sides (see Figure 1).

![Figure 1. Lying on your back with your knees bent](image)

2. Tighten the muscles in your abdomen (belly) and buttocks.

3. Push through your feet and lift your buttocks 3 to 4 inches off the bed (see Figure 2).
4. Hold the position for 5 seconds.
5. Then, slowly lower your buttocks back onto the bed.
6. Repeat 10 times.

**Mini crunches**

When doing this exercise, take a breath in before moving. Then, breathe out slowly through pursed lips while doing the movement. Don’t hold your breath.

1. Lie on your back with both knees bent and your feet on the bed.
2. Reach your arms out towards your knees (see Figure 3).
3. Tighten your abdominal muscles.
4. Slowly lift your shoulders 2 to 3 inches off the bed, while keeping your chin tucked (see Figure 4).
5. Lower your shoulders back down to the bed.
6. Repeat 10 times.
Mini squats

1. Stand next to a locked bedrail or countertop. Hold onto it with both hands.

2. Place your feet 6 to 12 inches away from the bed or counter. Your feet should be shoulder-width apart. Keep your back straight (see Figure 5).

3. Slowly bend your hips and knees until your knees are at about a 45-degree angle (see Figure 5).

4. Hold this position for 5 seconds.

5. Slowly straighten your hips and knees until you’re standing upright.

6. Repeat 10 times.

Heel raises

1. While standing, hold on to the back of a stable chair, raised bed rail, or handrail in the hallway for balance.

2. Place your feet about 6 inches apart.

3. Slowly push up onto your toes, lifting your heels off of the floor (see Figure 6).
4. Hold the position for 5 seconds.
5. Slowly lower your heels back down to the floor.
6. Repeat 10 times.

**Standing hamstring curls**

1. While standing, hold on to the back of a stable chair, raised bed rail, or handrail in the hallway for balance.

2. Bend your left knee, bringing your heel toward your buttocks. Keep your knees even with each other (see Figure 7). Stand tall and don’t bend your hips.

3. Lower your foot back down to the floor.
4. Repeat 10 times.
5. Repeat with your right leg.

**Standing hip extensions**

1. While standing, hold on to the back of a stable chair, raised bed rail, or handrail in the hallway for balance.
2. Extend your left leg behind you at the hip, while keeping your knee straight. Stand up straight (see Figure 8). Don’t lean forward.

![Figure 8. Extending your leg behind you](image)

3. Hold for 5 seconds.
4. Bring your leg forward to rest on the floor next to your other leg.
5. Repeat 10 times.
6. Repeat with your right leg.

**Standing side kicks**

1. Hold on to the backrest of a stable chair, a raised bed rail, or handrail in the hallway for balance. Stand up straight. Don’t lean to the side or forward.
2. Lift your right leg out to the side while keeping your toe pointed forward (see Figure 9).
3. Hold for 5 seconds.

4. Bring your raised leg back in to meet your other leg.

5. Repeat 10 times

6. Repeat the exercise with your left leg.

**Standing forward kicks**

1. Hold onto the backrest of a stable chair, a raised bed rail, or handrail in the hallway for balance. Stand up straight. Don’t lean to the side or forward.

2. While keeping your knee straight, slowly lift your right leg forward at the hip (see Figure 10).

3. Hold for a 5 seconds.
4. Slowly bring your leg back so that both feet are resting side by side.
5. Repeat 10 times
6. Repeat with your left leg.

Arm raises

1. Sit or stand comfortably with your back straight, shoulders back, and your head facing forward.
2. Raise your arms out to the side, up to the level of your shoulders, while keeping your elbows straight (see Figure 11).

![Figure 11. Raising your arms out to the side](image)

3. Hold for 5 seconds.
4. Lower your arms to your sides.
5. Repeat this 10 times.

Tricep extensions

1. Sit comfortably with your back straight, shoulders back, and head facing forward.
2. Pick up an elastic exercise band with both hands. Position your hands in front of your chest with your elbows raised out to your sides, parallel with the floor (see Figure 12).
3. Straighten your elbows fully until your arms are extended out to your sides. Keep the stretched band at chest level (see Figure 12).

4. Bend your elbows and slowly bring your hands back in toward your chest while keeping your upper arms raised.

5. Repeat 10 times.

**Bicep curls**

1. Sit comfortably with your back straight, shoulders back, and your head facing forward. Keep your right arm straight with your elbow at your side.

2. Place one end of the exercise band under your right foot. Hold the other end of the band with your right hand (see Figure 13).

3. With your arm close to your side, bend your elbow, bringing your hand [Description continues...]
toward your right shoulder (see Figure 13).

4. Hold for 5 seconds.

5. Lower your hand back down to the starting position.

6. Repeat 10 times.

7. Repeat with your left hand and left foot.

**Scapular retractions**

1. Sit comfortably with your back straight, shoulders back, and head facing forward.

2. Hold the ends of the exercise band in each hand. Raise your arms to shoulder height, keeping your elbows bent with your hands in front of your chest. Stretch out the exercise band to provide resistance (see Figure 14).

3. Move your arms back so that they are slightly behind you while squeezing your shoulder blades together (see Figure 14).

4. Hold for 5 seconds.

5. While keeping your arms raised, bring them forward so that your hands are in front of your chest again.

6. Repeat 10 times.

**Seated push-ups**

1. Sit comfortably in a chair with armrests. Keep your back straight, shoulders back, and head facing forward.

2. Place your hands on the armrests of the chair. Place your feet shoulder
distance apart, right below your knees.

3. Position yourself as if you’re going to stand up (see Figure 15).

![Figure 15. Lifting your body off your seat](image)

4. Straighten your elbows and lift your buttocks off the seat until your elbows are straight. Lift your buttocks as high as you can, even if you can’t get off the chair completely (see Figure 15).

5. Slowly lower yourself back onto the seat of your chair as you bend your elbows.

6. Repeat 10 times.

If you have any questions or concerns, talk with a member of your healthcare team. You can reach them Monday through Friday from 9:00 AM to 5:00 PM at ____________________. After 5:00 PM, during the weekend, and on holidays, please call____________________. If there’s no number listed, or you’re not sure, call 212-639-2000.
Herbal Remedies and Cancer Treatment

This information explains herbal remedies and how they can affect your cancer treatment.

One week before you have surgery or start chemotherapy or radiation therapy, you must stop taking any herbal or botanical home remedies or other dietary supplements. This is because they can:

- Interact with your other medications.
- Increase or lower your blood pressure.
- Thin your blood and increase your risk of bleeding.
- Make radiation therapy less effective.
- Increase the effects of sedation or anesthesia (medications to make you sleepy).

You can continue to use herbs in your food and drinks, such as using spices in cooking and drinking tea. However, you must stop taking herbal supplements before your treatment. Herbal supplements are stronger than the herbs you would use in cooking.

Common Herbal Supplements and Their Effects

These are some commonly used herbs and their side effects on cancer treatments.

Echinacea

- Can cause an allergic reaction, such as a rash or difficulty breathing.
• Can lower the effects of medications used to weaken the immune system.

**Garlic**

• Can lower your blood pressure, fat, and cholesterol levels.
• Can increase your risk of bleeding.

**Gingko (also known as *Ginkgo biloba*)**

• Can increase your risk of bleeding.

**Ginseng**

• Can lower the effects of sedation or anesthesia.
• Can increase your risk of bleeding.
• Can lower your blood glucose (sugar) level.

**Turmeric**

• Can make chemotherapy less effective.

**St. John’s Wort**

• Can interact with medications given during surgery.
• Can make your skin more sensitive to radiation or laser treatment.

**Valerian**

• Can increase the effects of anesthesia or sedation.

**Herbal formulas**

• Herbal formulas contain different herbs. We don’t know their side effects. You must also stop taking these products 1 week before treatment. Do not start taking herbal formulas again until your doctor tells you it’s safe.

This information does not cover all herbal remedies or possible side effects. Speak with your healthcare provider if you have any questions or concerns.
For more information about herbs and botanicals, visit the Memorial Sloan Kettering (MSK) Integrative Medicine Service website at www.aboutherbs.com.
About Your Incentive Spirometer

An incentive spirometer is a device that will expand your lungs by helping you to breathe more deeply and fully. The parts of your incentive spirometer are labeled in Figure 1.

Use your incentive spirometer after your surgery and do your deep breathing and coughing exercises. This will help keep your lungs active throughout your
recovery and prevent complications such as pneumonia.

How To Use Your Incentive Spirometer

Here is a video demonstrating how to use your incentive spirometer:

Please visit mskcc.org/pe/incentive_spirometer to watch this video.

Setting up your incentive spirometer

The first time you use your incentive spirometer, you will need to take the flexible tubing with the mouthpiece out of the bag. Stretch out the tubing and connect it to the outlet on the right side of the base (see Figure 1). The mouthpiece will be attached to the other end of the tubing.

Using your incentive spirometer

When you are using your incentive spirometer, make sure to breathe through your mouth. If you breathe through your nose the incentive spirometer will not work properly. You can plug your nose if you have trouble.

If you feel dizzy at any time, stop and rest. Try again at a later time.

To use your incentive spirometer, follow the steps below.

1. Sit upright in a chair or in bed. Hold the incentive spirometer at eye level.
   ● If you had surgery on your chest or abdomen (belly), hug or hold a pillow to help splint or brace your incision (surgical cut) while you’re using the incentive spirometer. This will help decrease pain at your incision.

2. Put the mouthpiece in your mouth and close your lips tightly around it. Slowly breathe out (exhale) completely.

3. Breathe in (inhale) slowly through your mouth as deeply as you can. As you take the breath, you will see the piston rise inside the large column. While the piston rises, the indicator on the right should move upwards. It should stay in between the 2 arrows (see Figure 1).

4. Try to get the piston as high as you can, while keeping the indicator
between the arrows.

- If the indicator does not stay between the arrows, you are breathing either too fast or too slow.

5. When you get it as high as you can, hold your breath for 10 seconds, or as long as possible. While you’re holding your breath, the piston will slowly fall to the base of the spirometer.

6. Once the piston reaches the bottom of the spirometer, breathe out slowly through your mouth. Rest for a few seconds.

7. Repeat 10 times. Try to get the piston to the same level with each breath.

8. After each set of 10 breaths, try to cough, holding a pillow over your incision, as needed. Coughing will help loosen or clear any mucus in your lungs.

9. Put the marker at the level the piston reached on your incentive spirometer. This will be your goal next time.

Repeat these steps every hour that you are awake.

Cover the mouthpiece of the incentive spirometer when you are not using it.
Information for Family and Friends for the Day of Surgery

This information explains what to expect on the day your friend or family member is having surgery at Memorial Sloan Kettering’s (MSK) main hospital.

Before the Surgery

After arriving at the hospital, the patient will be asked to provide contact information for the person who will be meeting with the surgeon after the surgery. This is the same person who will get updates from the nurse liaison during the surgery. If the patient is having an outpatient procedure, they will also be asked to provide contact information for the person who will be taking them home.

Once the patient is checked in, they will go to the Presurgical Center (PSC) to be examined before surgery. Sometimes, they may need to wait before they are admitted to the PSC.

In the PSC, the nurse will do an exam. One person can come along to the PSC, but other visitors should wait in the waiting area. If the patient wants, other visitors may join them when the nurse has finished the exam.

When the operating room (OR) is ready, a member of the surgical team will come to escort the patient into the OR. They will prepare the patient for surgery, which can take 15 to 90 minutes. Then, the surgery will begin.

Please remember the following:

- **Do not bring food or drinks to the waiting area.** Patients are not allowed to eat or drink before their surgery or procedure.

- Our patients are at high risk for infection. Please do not visit if you have any cold or flu symptoms (fever, sneezing, sniffles, or a cough). We may ask you
to wear a mask if there are any concerns about your health.

- If the patient brought any valuables, such as a cell phone, iPod, or iPad, please keep them safe for them during surgery.

- Sometimes, surgeries may be delayed. We make every effort to tell you when this happens.

## During the Surgery

After the patient is taken to the OR, please wait in the main lobby on the 1st floor, where you will be updated by the nurse liaison. While you’re waiting, here are some things you can do:

- Food and drinks are available in the cafeteria and gift shop. You can also bring your own food and eat it in the cafeteria.

- The coat-check room is located at the bottom of the escalator on the ground level. It’s open Monday through Friday from 11:00 am to 4:00 pm.

- Wireless Internet access is available in most areas of the hospital. The wifi network name is MSK_guest. You can also use the computers in the room off the main lobby.

- Please be courteous and mindful of others while using your cell phone. Use the designated area to accept and make calls on your cell phone. It may be useful to bring your phone charger to the hospital.

- The Mary French Rockefeller All Faith Chapel is an interfaith chapel located in room M106 near the main lobby on the 1st floor. It’s open at all times for meditation and prayer.

- The Patient Recreation Pavilion is open daily from 9:00 am to 8:00 pm for patients and their visitors. Children are allowed in the pavilion as long as they are supervised by an adult. The pavilion has arts and crafts, a library, an outdoor terrace, and scheduled entertainment events. To get to the pavilion, take the M elevators to the 15th floor.

## Surgery updates

A nurse liaison will keep you updated on the progress of surgery. They will:

- Give you information about the patient.
• Prepare you for your meeting with the surgeon.
• Arrange for you to visit the patient in the Post Anesthesia Care Unit (PACU).

To contact the nurse liaison:

• From inside the hospital, use a hospital courtesy phone. Dial 2000 and ask for beeper 9000. Please be patient, as this can take up to 2 minutes.
• Ask the information desk staff to contact the nurse liaison for you.

After the Surgery

Meeting with the surgeon
When the patient’s surgery is completed, we will call you and ask you to return to the concierge desk to tell you where to go to meet with the surgeon.

After you have met with the surgeon, return to the concierge desk and tell them that you have finished your consultation.

Visiting the patient in the PACU
After surgery, the patient will be taken to the PACU. It can take up to 90 minutes before the patient is ready to have visitors. You can use this time to take a walk or just relax in the waiting area until the patient is ready to see you.

When the patient is able to have visitors, a staff member will take you to the PACU for one brief visit. No one is allowed to stay overnight with the patient in the PACU, except for caregivers of pediatric patients.

Please follow these guidelines before your visit:

• Silence your cell phone.
• Apply an alcohol-based hand sanitizer (such as Purell®) before entering. There are hand sanitizer stations located throughout the hospital.
• Do not bring food or flowers into the PACU.

Please remember that only a limited number of visitors can go into the PACU. This is to keep the area quiet and allow the patients to rest and receive care.
While visiting in the PACU

- Speak quietly.
- Respect other patients’ privacy by staying at the bedside of your friend or family member.
- If any PACU patient needs special nursing attention, we may ask you to leave or to delay your visit.

The nurse will update you with the plan of care for the patient, such as whether the patient is staying overnight and when they will be moved to an inpatient room. If the patient is staying overnight, you may visit them again in the PACU. If the patient is going home the same day, a caregiver must take them home.

After your visit, a staff member will escort you back from the PACU.

We will give you a card with the PACU phone number. Please choose one person to call for updates.
Patient-Controlled Analgesia (PCA)

This information will help you understand what patient-controlled analgesia (PCA) is and how to use your PCA pump.

PCA helps you control your pain by letting you give yourself pain medication. It uses a computerized pump to deliver pain medication into your vein (intravenous, or IV PCA) or into your epidural space, which is in your spine (see Figure 1). Whether you have an IV PCA or an epidural PCA depends on what you and your doctor decide is right for you.

PCA is not right for everyone. Some people may not be able to use PCA. Tell your doctor if you have weakness in your hands and think you may have trouble pushing the PCA button. Also, before you get PCA, tell your doctor if you have sleep apnea. This may affect the way we prescribe your medication. People who are confused or cannot follow these instructions should not use PCA.

Using the PCA

To give yourself pain medication, press the button attached to the pump when you have pain. The pump will deliver a safe dose that your doctor has prescribed.

Only you should push the PCA button. Family and friends should never push the button.
The pump can be programmed to deliver your medication in 2 ways:

- **As needed.** You get your pain medication only when you press the button. It will not allow you to get more medication than prescribed. The pump is set to allow only a certain number of doses per hour.

- **Continuous.** You get your pain medication at a constant rate all the time. This can be combined with the “as needed” mode. That allows you to take extra doses safely if you’re having pain.

Tell your doctor if your PCA is not helping with your pain. Also, tell your doctor if your pain changes, such as if it gets worse, feels different than before, or you feel pain in a new place. Your doctor may be able to change the medication to one that may work better for you.

**Side Effects**

Pain medication delivered by the PCA can have side effects. Tell your doctor or nurse if you have any of these problems:

- Constipation
- Nausea or vomiting
- Dry mouth
- Itching
- Changes in your vision, such as seeing things that aren’t there
- Drowsiness, dizziness, or confusion
- Weakness, numbness, or tingling in your arms or legs
- Difficulty urinating
- Any other side effects or problems

Your doctor may be able to give you a different medication that has fewer side effects.
