

About Your Lumpectomy

This guide will help you get ready for your breast surgical excision or lumpectomy at MSK. It will also help you know what to expect as you recover.

Use this guide as a source of information in the days leading up to your surgery. Bring it with you on the day of your surgery. You and your care team will use it as you learn more about your recovery.

About your lumpectomy

You're having surgery to check a suspicious breast lesion (lump) or to treat breast cancer. You're having a:

- Surgical excision
- Lumpectomy
- Other: _____

Surgical excision

A surgical excision is a surgery to remove a lesion that's at a high risk of being cancer. After it's removed, the lesion is tested to see if it's cancer. Not all lesions are cancerous. Some are benign (not cancerous).

Lumpectomy

A lumpectomy is a surgery to remove a malignant (cancerous) tumor from your breast. Only the tumor and a small area of normal tissue around it are removed. A lumpectomy is a breast-conserving surgery that lets you keep your breast shape and, usually, your nipple.

During your surgery

Your surgeon will make an incision (surgical cut) in your breast. They'll remove the lesion or tumor and a small area of normal tissue around it. Then, they'll close the incision with sutures (stitches). They'll do their best to keep your breast looking like it did before surgery.

Getting ready for your surgery

You and your care team will work together to get ready for your surgery. Help us keep you safe by telling us if any of the following statements apply to you, even if you're not sure.

- I take a blood thinner, such as:
 - Aspirin
 - Heparin
 - Warfarin (Jantoven® or Coumadin®)
 - Clopidogrel (Plavix®)
 - Enoxaparin (Lovenox®)
 - Dabigatran (Pradaxa®)
 - Apixaban (Eliquis®)
 - Rivaroxaban (Xarelto®)
 - I take dietary supplements, such as herbs, vitamins, minerals, or natural or home remedies.
 - I have a pacemaker, automatic implantable cardioverter-defibrillator (AICD), or other heart device.
 - I have sleep apnea.
 - I've had a problem with anesthesia (medication to make me sleep during surgery) in the past.
 - I'm allergic to certain medication(s) or materials, including latex.
 - I'm not willing to receive a blood transfusion.
 - I drink alcohol.
 - I smoke or use an electronic smoking device, such as a vape pen, e-cigarette, or Juul®.
 - I use recreational drugs.
- There are others, so be sure your healthcare provider knows all the medications you're taking.
- I take prescription medications (medications my healthcare provider prescribes), including patches and creams.
 - I take over-the-counter medications (medications I buy without a prescription), including patches and creams.

About drinking alcohol

The amount of alcohol you drink can affect you during and after your surgery. It's important to talk with your healthcare providers about how much alcohol you drink. This will help us plan your care.

- If you stop drinking alcohol suddenly, it can cause seizures, delirium, and death. If we know you're at risk for these problems, we can prescribe medications to help keep them from happening.
- If you drink alcohol regularly, you may be at risk for other problems during and after your surgery. These include bleeding, infections, heart problems, and a longer hospital stay.

Here are things you can do before your surgery to keep from having problems:

- Be honest with your healthcare providers about how much alcohol you drink.
- Try to stop drinking alcohol once your surgery is planned. Tell your healthcare provider right away if you:
 - Get a headache.
 - Feel nauseous (like you're going to throw up).
 - Feel more anxious (nervous or worried) than usual.
 - Cannot sleep.

These are early signs of alcohol withdrawal and can be treated.

- Tell your healthcare provider if you cannot stop drinking.
- Ask your healthcare provider questions about drinking and surgery. As always, all your medical information will be kept private.

About smoking

If you smoke, you can have breathing problems when you have surgery. Stopping for even a few days before surgery can help.

Your healthcare provider will refer you to our Tobacco Treatment Program if you smoke. You can also reach the program by calling 212-610-0507.

About sleep apnea

Sleep apnea is a common breathing problem. It causes you to stop breathing for short lengths of time while you're asleep. The most common type is obstructive sleep apnea (OSA). With OSA, your airway becomes fully blocked during sleep.

OSA can cause serious problems during and after surgery. Please tell us if you have or think you might have sleep apnea. If you use a breathing device (such as a CPAP machine), bring it on the day of your surgery.

Using MyMSK

MyMSK (my.mskcc.org) is your MSK patient portal. You can use it to send and read messages from your care team, view your test results, see your appointment dates and times, and more. You can also invite your caregiver to make their own account so they can see information about your care.

If you do not have a MyMSK account, you can sign up at my.mskcc.org. You can get an enrollment ID by calling 646-227-2593 or your doctor's office.

For help, watch *How to Enroll in MyMSK: Memorial Sloan Kettering's Patient Portal* at www.msk.org/pe/enroll_mymsk. You can also contact the MyMSK Help Desk by emailing mymsk@mskcc.org or calling 800-248-0593.

Within 30 days of your lumpectomy

Presurgical testing (PST)

You'll have a PST appointment before your surgery. The date, time, and location will be printed on the appointment reminder from your surgeon's office. You can eat and take your usual medications the day of your appointment.

It's helpful to bring these things to your appointment:

- A list of all the medications you're taking, including prescription and over-the-counter medications, patches, and creams.

- Results of any tests done outside of MSK, such as a cardiac stress test, echocardiogram, or carotid doppler study.
- The names and telephone numbers of your healthcare providers.

During your PST appointment, you'll meet with a nurse practitioner (NP). They work closely with anesthesiology staff (specialized healthcare providers who will give you anesthesia during your surgery). Your NP will review your medical and surgical history with you. You may have tests to plan your care. Examples are:

- An electrocardiogram (EKG) to check your heart rhythm.
- A chest X-ray.
- Blood tests.

Your NP may recommend you see other healthcare providers. They'll also talk with you about which medications to take the morning of your surgery.

Identify your caregiver

Your caregiver plays an important role in your care. Before your surgery, you and your caregiver will learn about your surgery from your healthcare providers. After your surgery, your caregiver should be with you when you get your discharge instructions. They'll take you home when you're discharged and help you care for yourself at home.

For caregivers

Caring for a person going through cancer treatment comes with many responsibilities. We offer resources and support to help you manage them.

For information, visit www.msk.org/caregivers or read *A Guide for Caregivers*. You can ask your healthcare provider for a copy or find it at www.msk.org/pe/guide_caregivers

Fill out a Health Care Proxy form

If you have not already filled out a Health Care Proxy form, we recommend you do now. If you already filled one out or have any other advance directives, bring them to your next appointment.

A health care proxy is a legal document. It says who will speak for you if you cannot communicate for yourself. This person is called your health care agent.

- For information about health care proxies and other advance directives, read *Advance Care Planning for Cancer Patients and Their Loved Ones*. You can ask your healthcare provider for a copy or find it at www.msk.org/pe/advance_care_planning
- For information about being a health care agent, read *How to Be a Health Care Agent*. You can ask your healthcare provider for a copy or find it at www.msk.org/pe/health_care_agent
- If you have more questions about filling out a Health Care Proxy form, talk with your healthcare provider.

Arrange for someone to take you home

You must have a responsible care partner take you home after your surgery. A responsible care partner is someone who can help you get home safely and report concerns to your healthcare providers, if needed. Make sure to plan this before the day of your surgery.

If you do not have a responsible care partner to take you home, call one of the agencies below. They'll send someone to go home with you. There's usually a charge for this service, and you'll need to provide transportation. It's OK to use a taxi or car service, but you must still have a responsible care partner with you.

Agencies in New York

- VNS Health: 888-735-8913
- Caring People: 877-227-4649

Agencies in New Jersey

- Caring People: 877-227-4649

Buy a 4% chlorhexidine gluconate (CHG) solution antiseptic skin cleanser (such as Hibiclens®)

4% CHG solution is a skin cleanser that kills germs for 24 hours after you use it. Showering with it before your surgery will help lower your risk of infection after surgery. You can buy a 4% CHG solution antiseptic skin cleanser at the Evelyn H. Lauder Breast Center or at your local pharmacy without a prescription.

Buy 325-milligram acetaminophen tablets (such as Tylenol® Regular Strength)

Acetaminophen is an over-the-counter pain medication. You'll use it after your surgery to help manage your pain at home. It's helpful to buy it ahead of time. You can get it at your local pharmacy without a prescription. Always follow the instructions on the container or from your healthcare provider when taking any medication.

7 days before your lumpectomy

Follow your healthcare provider's instructions for taking aspirin

Aspirin can cause bleeding. If you take aspirin or a medication that contains aspirin, you may need to change your dose or stop taking it 7 days before your surgery. Follow your healthcare provider's instructions.

Do not stop taking aspirin unless they tell you to.

For more information, read *How To Check if a Medication or Supplement Has Aspirin, Other NSAIDs, Vitamin E, or Fish Oil*. You can find it in the "Educational Resources" section of this guide.

Stop taking vitamin E, multivitamins, herbal remedies, and other dietary supplements

Vitamin E, multivitamins, herbal remedies, and other dietary supplements can cause bleeding. Stop taking them 7 days before your surgery. If your healthcare provider gives you other instructions, follow those instead.

For more information, read *Herbal Remedies and Cancer Treatment*. You can find it in the “Educational Resources” section of this guide.

2 days before your lumpectomy

Stop taking nonsteroidal anti-inflammatory drugs (NSAIDs)

NSAIDs, such as ibuprofen (Advil® and Motrin®) and naproxen (Aleve®), can cause bleeding. Stop taking them 2 days before your surgery. If your healthcare provider gives you other instructions, follow those instead.

For more information, read *How To Check if a Medication or Supplement Has Aspirin, Other NSAIDs, Vitamin E, or Fish Oil*. You can find it in the “Educational Resources” section of this guide.

1 day before your lumpectomy

Note the time of your surgery

A staff member from the Admitting Office will call you after 2 p.m. the day before your surgery. If your surgery is scheduled for a Monday, they’ll call you the Friday before. If you do not get a call by 7 p.m., call 212-639-5014.

The staff member will tell you what time to arrive at the hospital for your surgery. They’ll also remind you where to go.

Shower with a 4% CHG solution antiseptic skin cleanser (such as Hibiclens)

The night before your surgery, shower with a 4% CHG solution antiseptic skin cleanser.

1. Wash your hair with your usual shampoo and conditioner. Rinse your head well.
2. Wash your face and genital (groin) area with your usual soap. Rinse your body well with warm water.
3. Open the 4% CHG solution bottle. Pour some into your hand or a clean washcloth.
4. Move away from the shower stream. Rub the 4% CHG solution gently over your body from your neck to your feet. Do not put it on your face or genital area.
5. Move back into the shower stream to rinse off the 4% CHG solution. Use warm water.
6. Dry yourself off with a clean towel.

Do not put on any lotion, cream, deodorant, makeup, powder, perfume, or cologne after your shower.

Instructions for eating and drinking before your surgery

- **Stop eating 8 hours before your arrival time.**
- 8 hours before your arrival time, do not eat or drink anything except the clear liquids listed below. You can

keep having them until 2 hours before your arrival time. Here is a list of what you can have:

- Water.
- Soda.
- Clear juices, such as lemonade, apple, and cranberry juices. Do not drink orange juice or juices with pulp.
- Black coffee or tea (without any type of milk or creamer).
- Sports drinks, such as Gatorade®.
- ClearFast or Ensure® Pre-Surgery drink.
- Gelatin, such as Jell-O®.

The morning of your lumpectomy

Remember, starting 8 hours before your arrival time, do not eat or drink anything except the things listed above.

Instructions for drinking before your surgery

Stop drinking 2 hours before your arrival time. This includes water.

Take your medications as instructed

A member of your care team will tell you which medications to take the morning of your surgery. Take only those medications with a sip of water. Depending on what medications you take, this may be all, some, or none of your usual morning medications.

Shower with a 4% CHG solution antiseptic skin cleanser (such as Hibiclens)

Shower with a 4% CHG solution antiseptic skin cleanser before you leave for the hospital. Use it the same way you did the night before.

Do not put on any lotion, cream, deodorant, makeup, powder, perfume, or cologne after your shower.

Things to remember

- If you wear contact lenses, wear your glasses instead. Wearing contact lenses during surgery can damage your eyes.
- Do not wear any metal objects. Remove all jewelry, including body piercings. The tools used during your surgery can cause burns if they touch metal.
- Leave valuable items at home.
- If you're menstruating (have your monthly period), use a sanitary pad, not a tampon. You'll get disposable underwear, as well as a pad if needed.

What to bring

- A button-down or loose-fitting top.
- A supportive bra, such as a sports bra.
- Your breathing device for sleep apnea (such as your CPAP machine), if you have one.
- Your Health Care Proxy form and other advance directives, if you filled them out.
- Your cell phone and charger.
- Only the money you may want for small purchases, such as a newspaper.
- A case for your personal items, if you have any. Examples of personal items include eyeglasses, hearing aids, dentures, prosthetic devices, wigs, and religious articles.

- This guide. You'll use it when you learn how to care for yourself after surgery.

Once you arrive for your surgery

Many staff members will ask you to say and spell your name and birth date. This is for your safety. People with the same or a similar name may be having surgery on the same day.

When it's time to change for surgery, you'll get a hospital gown, robe, and nonskid socks to wear.

Meet with a nurse

You'll meet with a nurse before surgery. Tell them the dose of any medications you took after midnight and the time you took them. Make sure to include prescription and over-the-counter medications, patches, and creams.

Your nurse may place an intravenous (IV) line in one of your veins, usually in your arm or hand. If your nurse does not place the IV, your anesthesiologist will do it in the operating room.

Meet with an anesthesiologist

You'll also meet with an anesthesiologist before surgery. They will:

- Review your medical history with you.
- Ask if you've had any problems with anesthesia in the past, including nausea or pain.
- Talk with you about your comfort and safety during your surgery.
- Talk with you about the kind of anesthesia you'll get.
- Answer your questions about your anesthesia.

Marking your surgical site

Along with asking your name and birth date, staff members may ask what your surgeon's name is, what surgery you're having, and which side is being operated on. Your surgeon or another member of your surgical team will use a marker to mark the place on your body that will be operated on.

In the Post-Anesthesia Care Unit (PACU) or recovery room

When you wake up after your surgery, you'll be in the PACU or your recovery room. A nurse will be keeping track of your body temperature, pulse, blood pressure, and oxygen levels. You'll be getting oxygen through a thin tube that rests below your nose.

Pain medication

Your healthcare providers will ask you about your pain often and give you pain medication as need. You'll also get pain medication to take at home. Talk with your healthcare provider about possible side effects and when to start switching to over-the-counter pain medication.

Leaving the PACU or your recovery room

Once you're awake and your pain is under control, you can go home with your responsible care partner. Before you leave, look at your incision with one of your healthcare providers. Knowing what it looks like will help you notice any changes later.

At home

Read *What You Can Do to Avoid Falling* to learn what you can do to keep from falling at home and during your appointments at MSK. You can find it at www.msk.org/pe/avoid_falling or ask your healthcare provider for a copy.

Filling out your Recovery Tracker

We want to know how you're feeling after you leave the hospital. To help us care for you, we'll send questions to your MyMSK account. We'll send them every day for 10 days after you're discharged. These questions are known as your Recovery Tracker.

Fill out your Recovery Tracker every day before midnight (12 a.m.). It only takes 2 to 3 minutes to complete. Your answers to these questions will help us understand how you're feeling and what you need.

Based on your answers, we may reach out to you for more information. Sometimes, we may ask you to call your surgeon's office. You can always contact your surgeon's office if you have any questions.

For more information, read *About Your Recovery Tracker*. You can find it at www.msk.org/pe/recovery_tracker or ask your healthcare provider for a copy.

Caring for your incision

Look at your incision every day. Call your healthcare provider if you see any redness or drainage.

Your incision will be closed with sutures under your skin. These sutures dissolve on their own and don't need to be removed.

If you go home with Steri-Strips™ (surgical tape) or Dermabond® (surgical glue) on your incision, they'll loosen and fall or peel off on their own. If not, your healthcare provider may remove them when they see you at your follow-up appointment. If they haven't fallen off after 14 days, you can take them off.

New sensations (feelings) in your breast

As you're healing, you may feel a few different sensations in your breast. Tenderness, numbness, and twinges are common examples. These sensations usually come and go and will lessen over time, usually within the first few months after surgery.

As you continue to heal, you may feel scar tissue along your incision site. It will feel hard. This is common and will soften over the next several months.

Showering

You can shower 24 hours after your surgery. Taking a warm shower is relaxing and can help decrease discomfort. During your shower, use soap to gently wash your incision. After your shower, pat the areas dry with a

clean towel. Leave your incision uncovered unless you have drainage from your incision. If you have drainage, call your healthcare provider.

Don't take tub baths, swim, or use hot tubs or saunas until talking with your healthcare provider at your first appointment after surgery.

Managing your pain

People have pain or discomfort for different lengths of time. Follow these guidelines to help manage your pain at home.

- Take your medications as directed and as needed.
- Call your healthcare provider if the medication prescribed for you does not help your pain.
- Do not drive or drink alcohol while you're taking prescription pain medication. Some prescription pain medications can make you drowsy (very sleepy). Alcohol can make the drowsiness worse.
- As your incision heals, you'll have less pain and need less pain medication. An over-the-counter pain reliever will help with aches and discomfort. Acetaminophen (Tylenol®) and ibuprofen (Advil® or Motrin®) are examples of over-the-counter pain relievers.
 - Follow your healthcare provider's instructions for stopping your prescription pain medication.
 - Do not take too much of any medication. Follow the instructions on the label or from your healthcare provider.
 - Read the labels on all the medications you're taking. This is very important if you're taking acetaminophen. Acetaminophen is an ingredient in many over-the-counter and prescription medications. Taking too much can harm your liver. Do not take more than one medication that has acetaminophen without talking with a member of your care team.
- Pain medication should help you get back to your normal activities. Take enough medication to do your activities and exercises comfortably. It's normal for your pain to increase a little as you start to be more active.

- Keep track of when you take your pain medication. It works best 30 to 45 minutes after you take it. Taking it when you first have pain is better than waiting for the pain to get worse.

Some prescription pain medications (such as opioids) may cause constipation. Constipation is when you poop less often than usual, have a harder time pooping, or both.

Preventing and managing constipation

Talk with your healthcare provider about how to prevent and manage constipation. You can also follow these guidelines.

- Go to the bathroom at the same time every day. Your body will get used to going at that time. But if you feel like you need to go, don't put it off.
- Try to use the bathroom 5 to 15 minutes after meals. After breakfast is a good time to go. That's when the reflexes in your colon are strongest.
- Exercise, if you can. Walking is an excellent form of exercise.
- Drink 8 to 10 (8-ounce) cups (2 liters) of liquids daily, if you can. Choose water, juices (such as prune juice), soups, and milkshakes. Avoid liquids with caffeine, such as coffee and soda. Caffeine can pull fluid out of your body.
- Slowly increase the fiber in your diet to 25 to 35 grams per day. Unpeeled fruits and vegetables, whole grains, and cereals contain fiber. If you have an ostomy or recently had bowel surgery, ask your healthcare provider before changing your diet.
- Both over-the-counter and prescription medications can treat constipation. Ask your healthcare provider before taking any medications for constipation. This is very important if you have an ostomy or have had bowel surgery. Follow the instructions on the label or from your healthcare provider. Examples of over-the-counter medications for constipation are:
 - Docusate sodium (Colace®). This is a stool softener (medication that makes your bowel movements softer) that

causes few side effects. You can use it to help prevent constipation. Do not take it with mineral oil.

- Polyethylene glycol (MiraLAX®). This is a laxative (medication that causes bowel movements) that causes few side effects. Take it with 8 ounces (1 cup) of a liquid. Only take it if you're already constipated.
- Senna (Senokot®). This is a stimulant laxative, which can cause cramping. It's best to take it at bedtime. Only take it if you're already constipated.

If any of these medications cause diarrhea (loose, watery bowel movements), stop taking them. You can start again if needed.

If you have not had a bowel movement in 2 days, call your healthcare provider.

Driving

You can start driving again as long as you aren't taking prescription pain medication that may make you drowsy. You should also have full range of motion of your arm and be able to comfortably turn the steering wheel.

You can ride in a car as a passenger at any time after you leave the hospital.

Follow-up appointments

Your follow-up appointment will be 1 to 2 weeks after your surgery. Your healthcare provider will talk with you about your pathology results during this appointment.

Managing your feelings

After surgery for a serious illness, you may have new and upsetting feelings. Many people say they felt weepy, sad, worried, nervous, irritable, and angry at one time or another. You may find that you cannot control some of these feelings. If this happens, it's a good idea to seek emotional support. Your healthcare provider can refer you to MSK's Counseling Center. You can also reach them by calling 646-888-0200.

The first step in coping is to talk about how you feel. Family and friends can help. Your healthcare providers can reassure, support, and guide you. It's always a good idea to let us know how you, your family, and your friends are feeling emotionally. Many resources are available to you and your family. Whether you're in the hospital or at home, we're here to help you and your family and friends handle the emotional aspects of your illness.

When to call your healthcare provider

Call your healthcare provider if:

- You have a fever above 101 °F (38.3 °C).
- You have shortness of breath.
- The skin around your incision is warmer than usual.
- You have more discomfort in the area.
- The area around your incision is getting redder.
- The area around your incision is starting to swell.
- Swelling around your incision is getting worse.
- There's drainage coming from your incision.

Contact information

Monday through Friday from 9 a.m. to 5 p.m., call your healthcare provider's office.

After 5 p.m., during the weekend, and on holidays, call 212-639-2000. Ask to speak to the person on call for your healthcare provider.

MSK support services

Admitting Office

212-639-7606

Call if you have questions about your hospital admission, such as asking for a private room.

Anesthesia

212-639-6840

Call if you have questions about anesthesia.

Blood Donor Room

212-639-7643

Call for information if you're interested in donating blood or platelets.

Bobst International Center

332-699-7968

We welcome patients from around the world and offer many services to help. If you're an international patient, call for help arranging your care.

Counseling Center

646-888-0200

Many people find that counseling helps them. Our counseling center offers counseling for individuals, couples, families, and groups. We can also prescribe medications to help if you feel anxious or depressed. To make an appointment, ask your healthcare provider for a referral or call the number above.

Food Pantry Program

646-888-8055

We give food to people in need during their cancer treatment. For more information, talk with your healthcare provider or call the number above.

Integrative Medicine Service

www.msk.org/integrativemedicine

Our Integrative Medicine Service offers many services to complement (go along with) traditional medical care, including music therapy, mind/body therapies, dance and movement therapy, yoga, and touch therapy. To schedule an appointment for these services, call 646-449-1010.

You can also schedule a consultation with a healthcare provider in the Integrative Medicine Service. They will work with you to come up with a plan for creating a healthy lifestyle and managing side effects. To make an appointment, call 646-608-8550.

MSK Library

library.mskcc.org

212-639-7439

You can visit our library website or call to talk with the library reference staff. They can help you find more information about a type of cancer. You can also visit LibGuides on MSK's library website at libguides.mskcc.org

Nutrition Services

www.msk.org/nutrition

212-639-7312

Our Nutrition Service offers nutritional counseling with one of our clinical dietitian nutritionists. Your registered dietitian-nutritionist will talk with you about your eating habits. They can also give advice on what to eat during and after treatment. To make an appointment, ask a member of your care team for a referral or call the number above.

Patient and Community Education

www.msk.org/pe

Visit our patient and caregiver education website to search for educational resources, videos, and online programs.

Patient Billing

646-227-3378

Call if you have questions about preauthorization with your insurance company. This is also called preapproval.

Patient Representative Office

212-639-7202

Call if you have questions about the Health Care Proxy form or concerns about your care.

Perioperative Nurse Liaison

212-639-5935

Call if you have questions about MSK releasing any information while you're having surgery.

Private Duty Nurses and Companions

917-862-6373

You can request private nurses or companions to care for you in the hospital and at home. Call for more information.

Rehabilitation Services

www.msk.org/rehabilitation

Cancers and cancer treatments can make your body feel weak, stiff, or tight. Some can cause lymphedema (swelling). Our physiatrists (rehabilitation medicine doctors), occupational therapists (OTs), and physical therapists (PTs) can help you get back to your usual activities.

- **Rehabilitation medicine doctors** diagnose and treat problems that affect how you move and do activities. They can design and help coordinate your rehabilitation therapy program, either at MSK or somewhere closer to home. Call Rehabilitation Medicine (Physiatry) at 646-888-1929 to learn more.
- An **OT** can help if you're having trouble doing usual daily activities. For example, they can recommend tools to help make daily tasks easier. A **PT** can teach you exercises to help build strength and flexibility. Call Rehabilitation Therapy at 646-888-1900 to learn more.

Resources for Life After Cancer (RLAC) Program

646-888-8106

At MSK, care does not end after your treatment. The RLAC Program is for patients and their families who have finished treatment.

This program has many services. We offer seminars, workshops, support groups, and counseling on life after treatment. We can also help with insurance and employment issues.

Sexual Health Programs

Cancer and cancer treatments can affect your sexual health, fertility, or both. MSK's sexual health programs can help you before, during, or after your treatment.

- Our **Female Sexual Medicine and Women's Health Program** can help with sexual health problems such as premature menopause or fertility issues. Ask a member of your MSK care team for a referral or call 646-888-5076 to learn more.

- Our **Male Sexual and Reproductive Medicine Program** can help with sexual health problems such as erectile dysfunction (ED). Ask a member of your care team for a referral or call 646-888-6024 to learn more.

Social Work

www.msk.org/socialwork

212-639-7020

Social workers help patients, families, and friends deal with common issues for people who have cancer. They provide individual counseling and support groups throughout your treatment. They can help you communicate with children and other family members.

Our social workers can also help refer you to community agencies and programs. They also have information about financial resources, if you're having trouble paying your bills. Call the number above for more information.

Spiritual Care

212-639-5982

Our chaplains (spiritual counselors) are available to listen, help support family members, and pray. They can contact community clergy or faith groups, or simply be a comforting companion and a spiritual presence. Anyone can ask for spiritual support. You do not have to have a religious affiliation (connection to a religion).

MSK's interfaith chapel is located near Memorial Hospital's main lobby. It's open 24 hours a day. If you have an emergency, call 212-639-2000. Ask for the chaplain on call.

Tobacco Treatment Program

www.msk.org/tobacco

212-610-0507

If you want to quit smoking, MSK has specialists who can help. Call for information.

Virtual Programs

www.msk.org/vp

We offer online education and support for patients and caregivers. These are live sessions where you can talk or just listen. You can learn about your diagnosis, what to expect during treatment, and how to prepare for your cancer care.

PATIENT & CAREGIVER EDUCATION

Exercises After Your Lumpectomy or Axillary Lymph Node Procedure

This information explains the exercises you will do after your lumpectomy or axillary lymph node procedure. Doing these exercises will help you get back your full range of motion.

You can do these exercises on the first day after your procedure if your surgeon tells you it's safe.

Deep breathing exercise

Deep breathing can help you relax and ease discomfort and tightness around your incision (surgical cut). It's also a good way to relieve stress during the day.

1. Sit comfortably in a chair.
2. Take a slow, deep breath in through your nose. Let your chest and belly expand.
3. Breathe out slowly through your mouth.

Repeat as many times as you want to.

Arm and shoulder exercises

Doing arm and shoulder exercises will help you get back your full range of motion on your affected side. Your affected side is the side where you had your procedure. Your range of motion is how much you can safely move a

part of your body.

With full range of motion, you will be able to:

- Move your arm over your head and out to the side.
- Move your arm behind your neck.
- Move your arm to the middle of your back.

When to do these exercises

Do these exercises 3 times every day until you can move your affected arm the way you did before your procedure. After that, keep doing them once a day. This often is important if you still feel tightness in your chest, shoulder, or under your affected arm. These exercises can help keep scar tissue from forming in your armpit and shoulder. Scar tissue can limit your arm movements later.

If you still have trouble moving your shoulder 4 weeks after your procedure, tell your surgeon. They will tell you if you need more rehabilitation, such as physical or occupational therapy.

Supplies

You will need these supplies:

- A stopwatch, timer, or watch with a second hand. You will use this to time some exercises.
- 4 pieces of tape. You will use these to mark your progress with some exercises.

Instructions

Do the exercises in the order they're listed here. Remember to follow your care team's instructions for when to start each exercise.

Backward shoulder rolls

This is a good exercise to start with. It gently stretches your chest and shoulder muscles.

1. Stand or sit comfortably with your arms relaxed at your sides.
2. In a circular motion, bring your shoulders forward, up, backward, and down (see Figure 1). Try to make the circle as big as you can and move both shoulders at the same time.

Figure 1. Backward shoulder rolls

3. Repeat this movement 5 times. If you feel tightness across your incision or chest, start with smaller circles. Make them bigger as the tightness lessens.

When this exercise starts to feel easier, start doing the movement an extra time. Build up to repeating it 10 times.

Shoulder wings

This exercise will help you get back outward movement of your shoulder. You can do it while sitting or standing.

1. Place your hands on your chest or collarbone.
2. Raise your elbows out to the side. Raise them as high as you can, up to shoulder level (see Figure 2).
 - If you feel discomfort near your incision, hold your position and do the deep breathing exercise. If the discomfort goes away, raise your

elbows a little higher. If the discomfort does not go away, do not raise your elbows any higher.

Figure 2. Shoulder wings

3. Slowly lower your elbows.
4. Repeat this movement 5 times. When you're done, slowly lower your hands.

When this exercise starts to feel easier, start doing the movement an extra time. Build up to repeating it 10 times.

Backward arm circles

If your procedure was done on both breasts, do this exercise with one arm at a time. Doing it with both arms at once will put too much pressure on your chest.

1. Stand with your feet slightly apart for balance. Raise your affected arm out to the side as high as you can (see Figure 3).

Figure 3. Backward arm circles

2. Start making slow, backward circles in the air with your arm. Make sure you're moving your arm from your shoulder, not your elbow. Keep your elbow straight.
3. Repeat this movement 5 times. Make each circle larger until they're as big as you can comfortably make them.
 - If you feel any aching or if your arm gets tired, take a break. Keep going when you feel better.
4. When you're done, slowly lower your arm to your side.

When this exercise starts to feel easier, start doing the movement an extra time. Build up to repeating it 10 times.

Forward arm circles

Follow the same instructions as for backward arm circles but make slow, forward circles.

Make sure to rest your arm for a moment between doing backward and forward arm circles.

W exercise

You can do this exercise while sitting or standing.

1. Form a “W” with your arms out to the side and palms facing forward (see Figure 4). Try to bring your hands up so they’re even with your face. If you cannot raise your arms that high, bring them to the highest comfortable position.

Figure 4. W exercise

2. Pinch your shoulder blades together and downward, as if you’re squeezing a pencil between them. Keep squeezing them together and downward for 5 seconds.
 - If you feel discomfort near your incision, hold your position and do the deep breathing exercise. If the discomfort goes away, try to bring your arms back a little further. If the discomfort does not go away, do not reach any further. Hold the furthest position you can and squeeze your shoulder blades together for 5 seconds.
3. Slowly bring your arms back to the starting position.
4. Repeat this movement 5 times. When you’re done, slowly lower your hands.

When this exercise starts to feel easier, start doing the movement an extra time. Build up to repeating it 10 times.

Back climb

You can do this exercise while sitting or standing. You will need a stopwatch, timer, or watch with a second hand for this exercise.

1. Place your hands behind your back. Hold the hand on your affected side with your other hand (see Figure 5). If your procedure was done on both breasts, use the arm that moves most easily to hold the other.

Figure 5. Back climb

2. Slowly slide your hands up the center of your back as far as you can. You should feel a gentle stretch in your shoulder area. Remember to breathe normally.
 - If you feel tightness near your incision, hold your position and do the deep breathing exercise. If the tightness lessens, try to slide your hands up a little further. If it does not, leave your hands where they are.
3. Hold this position for 30 seconds. Use a stopwatch, timer, or watch with a second hand to keep track. After 30 seconds, slowly lower your hands.

When this exercise starts to feel easier, start holding the position for a little longer. Build up to holding it for 60 seconds (1 minute).

Hands behind neck

You will need a stopwatch, timer, or watch with a second hand for this exercise.

The first few times you do this exercise, do it while lying comfortably on your back on your bed. Place a pillow under your head. You can also roll up a small or medium towel and place it under the middle of your back, along your spine. This will help open up the front of your chest.

Once you're comfortable doing this exercise while lying on your back, you can do it while sitting or standing.

1. Put your hands together on your lap or in front of you.
2. Slowly raise your hands toward your head. Keep your elbows together in front of you, not out to the sides (see Figure 6). Keep your head level. Do not bend your neck. Keep your shoulder blades squeezed together.

Figure 6. Hands behind neck

3. Slide your hands over your head until you reach the back of your neck. When you get to this point, spread your elbows out to the sides.
 - If you feel tightness across your incision or chest, hold your position and do the deep breathing exercise. It's OK to rest your hands on your head if you need to. If the tightness lessens, continue with the movement. If it does not, do not move any further.

4. Hold the highest position you can for 30 seconds. Use a stopwatch, timer, or watch with a second hand to keep track. Remember to breathe normally. After 30 seconds, slowly bring your elbows back together, slide your hands over your head, and lower your arms.

When this exercise starts to feel easier, start holding the position for a little longer. Build up to holding it for 60 seconds (1 minute).

Side wall crawls

You will need 2 pieces of tape for this exercise.

You should not feel pain while doing this exercise. It's normal to feel some tightness or pulling across the side of your chest. Focus on your breathing until the tightness lessens.

Be careful not to turn your body toward the wall while doing this exercise. Make sure only the side of your body faces the wall.

If your procedure was done on both breasts, start with step 3.

1. Stand with your unaffected side closest to the wall, about 1 foot (30.5 centimeters) away from the wall. Your unaffected side is the side where you did not have your procedure.
2. Reach as high as you can with your unaffected arm. Mark that point with a piece of tape (see Figure 7). This will be the goal for your affected arm.

Figure 7. Side wall crawls

3. Turn your body so your affected side is now closest to the wall. If your procedure was done on both breasts, start with either side closest to the wall.
4. Crawl your fingers up the wall as far as you can. Remember to breathe normally.
5. When you get to the point where you feel a good stretch, but not pain, do the deep breathing exercise.
6. Return to the starting position by crawling your fingers back down the wall.
7. Repeat this movement 5 times.
8. After your last crawl, use a piece of tape to mark the highest point you reached with your affected arm. This will let you see your progress each time you do the exercise.
9. If your procedure was done on both breasts, repeat the exercise with your other arm.

When this exercise starts to feel easier, start doing the movement an extra time. Build up to repeating it 10 times.

Forward wall crawls

You will need 2 pieces of tape for this exercise.

1. Stand facing a wall. Your toes should be about 6 inches (15 centimeters) from the wall.
2. Reach as high as you can with your unaffected arm. Mark that point with a piece of tape. This will be the goal for your affected arm. If your procedure was done on both breasts, set your goal using the arm that moves most comfortably.
3. Place both hands against the wall at a level that's comfortable. Crawl your fingers up the wall as far as you can, keeping them even with each other (see Figure 8). Try not to look up toward your hands or arch your back.

Figure 8. Forward wall crawls

4. When you get to the point where you feel a good stretch, but not pain, do the deep breathing exercise.
5. Return to the starting position by crawling your fingers back down the wall.
6. Repeat this movement 5 times. Each time you raise your hands, try to crawl a little bit higher.
7. After the last crawl, use the other piece of tape to mark the highest point

you reached with your affected arm. This will let you see your progress each time you do the exercise.

As you become more flexible, you may need to take a step closer to the wall. This will let you reach a little higher.

When this exercise starts to feel easier, start doing the movement an extra time. Build up to repeating it 10 times.

Tips for managing swelling

After your procedure, you may have some swelling or puffiness in your hand or arm on your affected side. This is normal and usually goes away on its own.

If you notice swelling in your hand or arm, follow these tips to help the swelling go down.

- Raise your arm above the level of your heart and do hand pumps several times a day.
 - To do hand pumps, slowly open and close your fist 10 times. This will help drain the fluid out of your arm.
 - Do not hold your arm straight up over your head for more than a few minutes. This can cause your arm muscles to get tired.
- Raise your arm to the side a few times a day for about 20 minutes at a time. To do this, sit or lie down on your back. Rest your arm on a few pillows next to you so it's raised above the level of your heart.
- If you're able to sleep on your unaffected side, place 1 or 2 pillows in front of you. Rest your affected arm on them while you sleep.

If the swelling does not go down within 4 to 6 weeks, call your surgeon or nurse.

If you have any questions, contact a member of your care team directly. If you're a patient at MSK and you need to reach a provider after 5 p.m., during the weekend, or on a holiday, call 212-639-2000.

Herbal Remedies and Cancer Treatment

This information explains herbal remedies and how they can affect your treatment.

About Herbal Remedies

Herbal remedies are any herbs, botanical (plant-based) supplements, or dietary supplements you take for their health benefits. These may come as tablets, capsules, powders, teas, liquid extracts, and fresh or dried plants.

Some herbal remedies can help prevent or manage side effects of cancer or your treatment. The herbal remedies that can help you depend on what symptoms you have and what treatment you're getting.

Even though herbal remedies can feel safe, they may not all be safe. Herbal remedies do not go through the same testing as prescription medications to make sure they work and are safe.

Some herbal remedies may be harmful. This is because they can:

- Affect how your other medications work.
- Raise or lower your blood pressure.
- Thin your blood and increase your risk of bleeding.
- Keep radiation therapy from working as well as it should.
- Change how your body reacts to sedation (medication to make you calmer) or general anesthesia (medication to make you sleepy).

Talk with your healthcare provider about any herbal remedies or other

supplements you are taking. They can provide an open and safe space to talk about these products.

For more information about herbs and supplements, visit www.aboutherbs.com or call MSK's Integrative Medicine Service at 646-608-8550.

Stop taking herbal remedies before your treatment

Stop taking herbal remedies and other dietary supplements 7 days (1 week) before you:

- Have surgery.
- Start chemotherapy.
- Start radiation therapy.
- Have certain procedures. Your healthcare provider will let you know if you need to stop taking herbal remedies before your procedure.

Herbal remedies and other dietary supplements can cause bleeding and affect your treatment. Follow your healthcare provider's instructions for when to restart taking herbal remedies.

You can still use some herbs in your food and drinks, such as using spices in cooking and drinking tea. Herbal remedies are stronger than the herbs you cook with.

Common Herbal Remedies and Their Effects

These are some commonly used herbs and their side effects on cancer treatments.

Echinacea (EH-kih-NAY-shuh)

- Can cause rare but serious allergic reactions, such as a rash or trouble breathing.
- Can keep medications that weaken your immune system from working as well as they should.

Garlic

- Can lower your blood pressure and cholesterol levels.
- Can increase your risk of bleeding.

Gingko (also known as Gingko biloba)

- Can increase your risk of bleeding.

Ginseng (JIN-seng)

- Can keep sedation or general anesthesia from working as well as they should.
- Can increase your blood pressure.
- Can increase your risk of bleeding.
- Can lower your blood glucose (sugar) level.

Turmeric (TER-mayr-ik)

- Can keep chemotherapy from working as well as it should.

St. John's Wort

- Can keep some medications from working as well as they should.
- Can make your skin more sensitive to radiation or laser treatment.

Valerian (vuh-LEER-ee-un)

- Can make sedation or general anesthesia affect you more than they should.

Herbal formulas

- Herbal formulas contain many different herbs and dosages.
- Stop taking these products 7 days (1 week) before treatment. Do not start taking herbal formulas again until your healthcare provider tells you it is safe.

This information does not cover all herbal remedies or possible side effects. Talk with your healthcare provider if you have any questions or concerns.

Contact Information

- To schedule a consultation with a healthcare provider in Integrative Medicine, call 646-608-8550.
- To make an appointment for Integrative Medicine Service's therapies, classes, and workshops, call 646-449-1010.

For more information, visit www.mskcc.org/IntegrativeMedicine or read *Integrative Medicine Therapies and Your Cancer Treatment* (www.mskcc.org/pe/integrative_therapies).

How To Check if a Medicine or Supplement Has Aspirin, Other NSAIDs, Vitamin E, or Fish Oil

This information will help you check if your medicines or dietary supplements have aspirin, other NSAIDs, vitamin E, or fish oil as an active ingredient. NSAID stands for nonsteroidal anti-inflammatory drug.

It's important to stop taking these medicines and supplements before many cancer treatments. They affect your platelets (blood cells that clot to prevent bleeding) and can raise your risk of bleeding.

Other dietary supplements, such as vitamins and herbal remedies, can also affect your cancer treatment. Read *Herbal Remedies and Cancer Treatment* (www.mskcc.org/pe/herbal_remedies) to learn more.

Make sure your healthcare provider always knows all the prescription and over-the-counter medicines and supplements you're taking. This includes patches and creams.

A prescription medicine is one you can only get with a prescription from your healthcare provider. An over-the-counter medicine is one you can buy without a prescription.

What is an active ingredient?

An active ingredient is the part of a medicine or supplement that makes it work. Some medicines and supplements have just one active ingredient. Others have more. For example:

- Ibuprofen is the active ingredient in Advil® and Motrin®. Ibuprofen is an NSAID.
- Naproxen is the active ingredient in Aleve®. Naproxen is an NSAID.
- Acetaminophen is the active ingredient in Tylenol®.
- Aspirin, acetaminophen, and caffeine are the active ingredients in Excedrin®.

Generic medicines sometimes use their active ingredient as their name. But people often call medicines and supplements by a brand name, even if they're generic. This can make it hard to know their active ingredients.

How to find a medicine or supplement's active ingredients

You can always find the active ingredients by reading the label.

Over-the-counter medicines

Over-the-counter medicines list their active ingredients in the "Drug Facts" label (see Figure 1). Active ingredients are always the first thing on the Drug Facts label.

Figure 1. Active ingredients on an over-the-counter medicine label

Prescription medicines

Prescription medicines list their active ingredients on the label. Their active ingredients and their generic name are the same thing.

Labels often look different depending on which pharmacy you use. Here's an example of where to find a medicine's active ingredients (generic name) on a label from MSK's pharmacy (see Figure 2).

Figure 2. Active ingredients on a prescription medicine label

Dietary supplements

Dietary supplements list their active ingredients in the "Supplement Facts" label (see Figure 3). The active ingredients always have an amount per serving and % daily value included.

	Amount Per Serving	% Daily Value
Vitamin A (as retinyl acetate and 50% as beta-carotene)	5000 IU	100%
Vitamin C (as ascorbic acid)	60 mg	100%
Vitamin D (as cholecalciferol)	400 IU	100%
Vitamin E (as di-alpha tocopheryl acetate)	90 IU	100%
Thiamin (as thiamin mononitrate)	1.5 mg	100%
Riboflavin	1.7 mg	100%
Niacin (as niacinamide)	20 mg	100%
Vitamin B ₆ (as pyridoxine hydrochloride)	2.0 mg	100%
Folate (as folic acid)	400 mcg	100%
Vitamin B ₁₂ (as cyanocobalamin)	6 mcg	100%
Biotin	30 mcg	10%
Pantothenic Acid (as calcium pantothenate)	10 mg	100%

Other ingredients: Gelatin, lactose, magnesium stearate, microcrystalline cellulose, FD&C Yellow No. 6, propylene glycol, propylparaben, and sodium benzoate.

Figure 3. Active ingredients on a supplement label

Active ingredients to look for

If your medicine or supplement has any of these active ingredients, you may need to stop taking it before, during, or after your cancer treatment or surgery. Follow your care team's instructions.

Active ingredients to look for		
<ul style="list-style-type: none">• Acetylsalicylic acid• Alpha-linolenic acid (ALA)• Aspirin• Acetaminophen*• Celecoxib• Diclofenac• Diflunisal• Docosahexaenoic acid (DHA)• Eicosapentaenoic acid (EPA)	<ul style="list-style-type: none">• Etodolac• Fish oil• Fenoprofen Flurbiprofen• Ibuprofen• Indomethacin• Ketoprofen• Ketorolac• Meclofenamate• Mefenamic acid• Meloxicam	<ul style="list-style-type: none">• Nabumetone• Naproxen• Omega-3 fatty acids• Omega-6 fatty acids• Oxaprozin• Piroxicam• Sulindac• Tolmetin• Vitamin E

* The full name acetaminophen isn't always written out. Look for the common abbreviations listed below, especially on prescription pain relievers.

Common abbreviations for acetaminophen		
<ul style="list-style-type: none">• APAP• Acetamin	<ul style="list-style-type: none">• AC• Acetam	<ul style="list-style-type: none">• Acetaminop• Acetaminoph

About acetaminophen (Tylenol)

In general, acetaminophen is safe to take during cancer treatment. It doesn't affect platelets. That means it will not raise your chance of bleeding. If you're getting chemotherapy, talk with your healthcare provider before taking acetaminophen.

There is a limit to how much acetaminophen you can take in a day. Always follow the instructions from your care team or on the medicine's label.

Acetaminophen is in many different prescription and over-the-counter medicines. It's possible to take too much without knowing. **Always read the label on the medicines you take.** Do not take more than 1 medicine that has acetaminophen at a time without talking with a member of your care team.

Instructions before your cancer treatment

Tell your healthcare provider if you take aspirin, other NSAIDs, vitamin E, or fish oil. They'll tell you if you need to stop taking it. You'll also find instructions in the information about your treatment.

Before your surgery

Follow these instructions if you're having surgery or a surgical procedure. **If your healthcare provider gives you other instructions, follow those instead.**

- If you take aspirin or a medicine that has aspirin, you may need to change your dose or stop taking it 7 days before your surgery. Follow your healthcare provider's instructions. **Do not stop taking aspirin unless your healthcare provider tells you to.**
- If you take vitamin E, fish oil, or a supplement that has vitamin E or fish oil, stop taking it 7 days before your surgery or as directed by your healthcare provider.
- If you take an NSAID or a medicine that has an NSAID, stop taking it 48 hours (2 days) before your surgery or as directed by your healthcare provider.

Before your radiology procedure

Follow these instructions if you're having a radiology procedure (including Interventional Radiology, Interventional Mammography, Breast Imaging, and General Radiology). **If your healthcare provider gives you other instructions, follow those instead.**

- If you take aspirin or a medicine that has aspirin, you may need to stop taking it 5 days before your procedure. Follow your healthcare provider's instructions. **Do not stop taking aspirin unless your healthcare provider tells you to.**
- If you take an NSAID or a medicine that has an NSAID, you may need to stop taking it 24 hours (1 day) before your procedure. Follow your healthcare provider's instructions.

Before and during your chemotherapy

Chemotherapy can lower your platelet count, which can increase your risk of bleeding. No matter if you're just starting chemotherapy or have been getting it, talk with your healthcare provider before taking aspirin, other NSAIDs, vitamin E, or fish oil.

If you have any questions, contact a member of your care team directly. If you're a patient at MSK and you need to reach a provider after 5 p.m., during the weekend, or on a holiday, call 212-639-2000.

For more resources, visit www.mskcc.org/pe to search our virtual library.
