

#### PATIENT & CAREGIVER EDUCATION

## **Zyflamend**

This information describes the common uses of Zyflamend, how it works, and its possible side effects.

Tell your healthcare providers about any dietary supplements you're taking, such as herbs, vitamins, minerals, and natural or home remedies. This will help them manage your care and keep you safe.

### What is it?

Zyflamend has not been shown to treat cancer. Studies in humans are very limited.

Zyflamend is an herbal supplement consisting of Holy basil, turmeric, ginger, green tea, rosemary, hu zhang, Chinese goldthread, barberry, oregano, and skullcap. Promoters of Zyflamend claim that it has anti-inflammatory and antiaging effects. Lab studies suggest it may reduce inflammation and levels of certain enzymes that produce estrogen. It can also cause cell death. However, studies in humans are quite limited. Results from a small study suggest it may help lower prostate specific antigen (PSA), a marker of prostate cancer. More research is needed.

# What are the potential uses and benefits?

#### Cancer treatment

A few lab studies suggest that Zyflamend can reduce the number of prostate cancer cells and also decrease certain markers related to some

Zyflamend 1/2

types of breast cancer. Zyflamend did not cause serious adverse events in men with prostatic intraepithelial neoplasia and also decreased certain prostate disease-related markers. More research is needed.

#### • Inflammation

A few lab studies suggest that Zyflamend reduces inflammation, but there are no data from clinical trials.

## What are the side effects?

Bad taste in the mouth, heartburn, and diarrhea.

## What else do I need to know?

#### Do Not Take if:

- You have **hypersensitivity** to any of the constituents.
- You are taking chemotherapy drugs: Preclinical studies suggest
   Zyflamend may increase their effects. Clinical relevance has yet to be
   determined.
- You are taking **prescription medications:** There are many botanicals in Zyflamend, and therefore a greater chance for herb-drug interactions.

If you have questions or concerns, contact your healthcare provider. A member of your care team will answer Monday through Friday from 9 a.m. to 5 p.m. Outside those hours, you can leave a message or talk with another MSK provider. There is always a doctor or nurse on call. If you're not sure how to reach your healthcare provider, call 212-639-2000.
