Instructions for After Your Nipple and Areola Tattoo Procedure

This information explains how to care for yourself after your nipple and areola (the circle around your nipple) tattoo procedure.

1 to 3 Days After Your Procedure

- Your physician assistant will place Tegaderm™ plastic dressing on your tattoo right after your procedure. Leave this dressing on for 3 days.
- You may shower normally with your dressing on. It's waterproof.
- Fluid may build up underneath your dressing. This is normal.
- If your dressing starts to come off or if fluid is dripping from your dressing, put another Tegaderm™ dressing over the one you have on.

4 Days After Your Procedure

- Remove the Tegaderm™ dressing. Gently clean the area in the shower with warm water and your normal shower soap. Don't rub the area to get it clean.
- Leave any scabs that may have formed alone. They will heal and come off on their own.
- After your shower, dry the area gently. Apply non-scented white lotion (such as Lubriderm®, Aveeno®, or Eucerin®) to the tattooed area until it absorbs.

5 to 14 Days After Your Procedure

- Continue applying non-scented white lotion to the area at least once a day.
- You may apply lotion more than once a day if the area looks dry.

General Care Guidelines

- Don't soak in a pool, bath, or hot tub until your tattoo is completely healed. This usually takes about 2 weeks.
- If a crust or scab appears on the area, don't peel it off. This can pull away the ink on your tattoo.
- Don't exercise (such as run, do yoga, or cycle) for 1 week after your procedure or while there's scabbing.

If you're in physical therapy, it's okay to continue after your procedure.

- Don't lift anything heavier than 20 pounds (9 kilograms) for 1 week after your procedure or while there's scabbing.
- You can wear a bra at any time.

When to Call Your Healthcare Provider

Call your healthcare provider if you have:

- A fever of 101° F (38.3° C) or higher
- Pain at or around the treated area
- Increasing redness or warmth at or around the treated area
- Thick drainage at or around the treated area

If you have questions or concerns, contact your healthcare provider. A member of your care team will answer Monday through Friday from 9 a.m. to 5 p.m. Outside those hours, you can leave a message or talk with another MSK provider. There is always a doctor or nurse on call. If you're not sure how to reach your healthcare provider, call 212-639-2000.
