

PATIENT & CAREGIVER EDUCATION

Chikungunya Vaccine (Live

This information from UpToDate® Lexidrug™ explains what you need to know about this medication, including what it's used for, how to take it, its side effects, and when to call your healthcare provider.

Brand Names: US

Ixchiq [DSC]

What is this drug used for?

- It is used to prevent disease caused by chikungunya virus.

What do I need to tell my doctor BEFORE I take this drug?

- If you are allergic to this drug; any part of this drug; or any other drugs, foods, or substances. Tell your doctor about the allergy and what signs you had.
- If you have a weak immune system or a disease that may cause a weak immune system like HIV.
- If you have had chemo treatments before and you still have blood problems from those treatments.

- If you are taking any drugs that suppress your immune system. There are many drugs that can do this. Ask your doctor or pharmacist if you are not sure.

This is not a list of all drugs or health problems that interact with this drug.

Tell your doctor and pharmacist about all of your drugs (prescription or OTC, natural products, vitamins) and health problems. You must check to make sure that it is safe for you to take this drug with all of your drugs and health problems. Do not start, stop, or change the dose of any drug without checking with your doctor.

What are some things I need to know or do while I take this drug?

- Tell all of your health care providers that you take this drug. This includes your doctors, nurses, pharmacists, and dentists.
- Vaccines may not fully protect all people who get them. If you have questions, talk with the doctor.
- Other measures are needed along with this drug to help avoid mosquito bites. This includes wearing the correct clothes, insect repellents, and mosquito nets. Talk with the doctor if you have questions about how to avoid mosquito bites.

- Low white blood cell counts have happened. Most of the time, this happened within the first week after the vaccine and went back to normal within 1 month. If you have questions, talk with the doctor.
- If you are 65 or older, talk with your doctor. The risk of severe chikungunya-like illness after getting this vaccine may be higher.
- Tell your doctor if you are pregnant, plan on getting pregnant, or are breast-feeding. You will need to talk about the benefits and risks to you and the baby.
- If you got this vaccine when you were pregnant (especially within 14 days before giving birth), tell your baby's doctor. Passing of the vaccine virus to the baby may happen at birth. Chikungunya disease can be severe and sometimes deadly in newborns.

What are some side effects that I need to call my doctor about right away?

WARNING/CAUTION: Even though it may be rare, some people may have very bad and sometimes deadly side effects when taking a drug. Tell your doctor or get medical help right away if you have any of the following signs or symptoms that may be related to a very bad side effect:

- Signs of an allergic reaction, like rash; hives; itching; red, swollen, blistered, or peeling skin with or without fever;

wheezing; tightness in the chest or throat; trouble breathing, swallowing, or talking; unusual hoarseness; or swelling of the mouth, face, lips, tongue, or throat.

- Fast or abnormal heartbeat.
- Any unexplained bruising or bleeding.
- Stiff neck.
- If bright lights bother your eyes.
- Severe dizziness or passing out can happen after or sometimes before getting a vaccine. Tell your doctor right away if you feel dizzy.
- It is common to have effects with this vaccine that are like the symptoms of chikungunya disease. However, sometimes these could be severe and may last for weeks or months. Some patients have had to go to the hospital. A death has also been reported. Call your doctor right away if symptoms like fever, headache, feeling tired or weak, muscle pain, or joint pain are severe. If they bother you, cause problems with daily living, or do not go away, talk with your doctor.

What are some other side effects of this drug?

All drugs may cause side effects. However, many people have no side effects or only have minor side effects. Call your doctor or get medical help if any of these side effects or any other side effects bother you or do not go away:

- Tenderness or other reaction where the injection was given.
- Fever or chills.
- Upset stomach.
- Headache.
- Feeling tired or weak.
- Muscle or joint pain.

These are not all of the side effects that may occur. If you have questions about side effects, call your doctor. Call your doctor for medical advice about side effects.

You may report side effects to your national health agency.

Report side effects to the FDA/CDC Vaccine Adverse Event Reporting System (VAERS) at <https://vaers.hhs.gov/reportevent.html> or by calling 1-800-822-7967.

How is this drug best taken?

Use this drug as ordered by your doctor. Read all information given to you. Follow all instructions closely.

- It is given as a shot into a muscle.

What do I do if I miss a dose?

- Call your doctor to find out what to do.

How do I store and/or throw out this drug?

- If you need to store this drug at home, talk with your doctor, nurse, or pharmacist about how to store it.

General drug facts

- If your symptoms or health problems do not get better or if they become worse, call your doctor.
- Do not share your drugs with others and do not take anyone else's drugs.
- Keep all drugs in a safe place. Keep all drugs out of the reach of children and pets.
- Throw away unused or expired drugs. Do not flush down a toilet or pour down a drain unless you are told to do so. Check with your pharmacist if you have questions about the best way to throw out drugs. There may be drug take-back programs in your area.
- Some drugs may have another patient information leaflet. If you have any questions about this drug, please talk with your doctor, nurse, pharmacist, or other health care provider.
- Some drugs may have another patient information

leaflet. Check with your pharmacist. If you have any questions about this drug, please talk with your doctor, nurse, pharmacist, or other health care provider.

- If you think there has been an overdose, call your poison control center or get medical care right away. Be ready to tell or show what was taken, how much, and when it happened.
