Brand Names: US

Injectafer

Brand Names: Canada

Ferinject

Warning

- Low phosphate levels in your child's blood may happen with this drug. This can be serious and lead to treatment in the hospital, soft bones, or broken bones. This can happen if your child is not at risk for low phosphate levels. Your child may need to have blood phosphate levels checked while taking this drug. Tell the doctor right away if your child has signs of low blood phosphate levels like feeling very tired or weak, muscle pain or weakness, or bone or joint pain.

What is this drug used for?

- It is used to treat anemia caused by low iron levels.

What do I need to tell the doctor BEFORE my child takes this drug?

- If your child is allergic to this drug; any part of this drug; or any other drugs, foods, or substances. Tell the doctor about the allergy and what signs your child had.
- If your child has low phosphate levels.
- If your child has any of these health problems: Too much iron in the body or anemia from a cause other than low iron.
- If your child takes an iron product by mouth.

This is not a list of all drugs or health problems that interact with this drug.

Tell the doctor and pharmacist about all of your child's drugs (prescription or OTC, natural products, vitamins) and health problems. You must check to make sure that it is safe to give this drug with all of your child's other drugs and health problems. Do not start, stop, or change the dose of any drug your child takes without checking with the doctor.

What are some things I need to know or do while my child takes this drug?

- Tell all of your child's health care providers that your child is taking this drug. This includes your child's doctors, nurses, pharmacists, and dentists.
- High blood pressure has happened with this drug. Have your child's blood pressure checked as you have been told by the doctor.
- Have your child's blood work and other lab tests checked as you have been told by the doctor.
- This drug may affect certain lab tests. Tell all of your child's health care providers and lab workers that your child takes this drug.

If your child is pregnant or breast-feeding a baby:

- Talk with the doctor if your child is pregnant, becomes pregnant, or is breast-feeding a baby. You will need to talk about the benefits and risks to your child and the baby.

What are some side effects that I need to call my child's doctor about right away?

WARNING/CAUTION: Even though it may be rare, some people may have very bad and sometimes deadly side effects when taking a drug. Tell your child's doctor or get medical help right away if your child has any of the following signs or symptoms that may be related to a very bad side effect:

- Signs of an allergic reaction, like rash; hives; itching; red, swollen, blistered, or peeling skin with or without fever; wheezing; tightness in the chest or throat; trouble breathing, swallowing, or talking; unusual hoarseness; or swelling of the mouth, face, lips, tongue, or throat. Rarely, some allergic reactions have been deadly.
- Signs of high blood pressure like very bad headache or dizziness, passing out, or change in eyesight.
- Flushing.
- Dizziness or passing out.
- Swelling.
- A fast heartbeat.
- Blue or gray skin color of the hands or feet.
- Cold or pale skin.
- This drug may stain your child's skin brown near where it is given if it leaks from the vein. This may last for a long time. Tell the nurse if your child has any leaking of fluid or other signs where the drug is going into the body.
- Low phosphate levels in your child's blood may happen with this drug. This can be serious and lead to treatment in the hospital, soft bones, or broken bones. This can happen if your child is not at risk for low phosphate levels.

Your child may need to have blood phosphate levels checked while taking this drug. Tell the doctor right away if your child has signs of low blood phosphate levels like feeling very tired or weak, muscle pain or weakness, or bone or joint pain.

What are some other side effects of this drug?

All drugs may cause side effects. However, many people have no side effects or only have minor side effects. Call your child's doctor or get medical help if any of these side effects or any other side effects bother your child or do not go away:

- Upset stomach or throwing up.
- Headache.
- Pain or redness where the injection was given.

These are not all of the side effects that may occur. If you have questions about side effects, call your child's doctor. Call your child's doctor for medical advice about side effects.

You may report side effects to your national health agency.

How is this drug best given?

Give this drug as ordered by your child's doctor. Read all information given to you. Follow all instructions closely.

- It is given into a vein for a period of time.

What do I do if my child misses a dose?

- Call your child's doctor to find out what to do.

How do I store and/or throw out this drug?

- If you need to store this drug at home, talk with your child's doctor, nurse, or pharmacist about how to store it.

General drug facts

- If your child's symptoms or health problems do not get better or if they become worse, call your child's doctor.
- Do not share your child's drug with others and do not give anyone else's drug to your child.
- Keep all drugs in a safe place. Keep all drugs out of the reach of children and pets.
- Throw away unused or expired drugs. Do not flush down a toilet or pour down a drain unless you are told to do so. Check with your pharmacist if you have questions about the best way to throw out drugs. There may be drug take-back programs in your area.
- Some drugs may have another patient information leaflet. If you have any questions about this drug, please talk with your child's doctor, nurse, pharmacist, or other health care provider.
- If you think there has been an overdose, call your poison control center or get medical care right away. Be ready to tell or show what was taken, how much, and when it happened.
