

## PATIENT & CAREGIVER EDUCATION

# Omidubicel

This information from Lexicomp® explains what you need to know about this medication, including what it's used for, how to take it, its side effects, and when to call your healthcare provider.

## Brand Names: US

Omisirge

## Warning

- Infusion reactions have happened with this drug. Infusion reactions may be deadly. Tell your child's doctor if your child has an allergy to dimethyl sulfoxide (DMSO), Dextran 40, gentamicin, albumin, or products made from cows. Tell your child's doctor right away if your child has fever or chills; a fast or abnormal heartbeat; signs of high or low blood pressure like dizziness or passing out, headache, or change in eyesight; trouble swallowing or breathing; severe upset stomach or throwing up; muscle or joint pain; or feeling very tired or weak during the infusion.
- A health problem called graft-vs-host disease (GvHD) has happened with this drug. GvHD may be deadly. Taking drugs to suppress the immune system may help to lower the risk of GvHD. Tell your child's doctor right away if your child has a rash, diarrhea, or yellow skin or eyes.
- A health problem called engraftment syndrome may happen with this drug. This may be deadly. Tell your child's doctor right away if your child has unexplained fever, rash, trouble breathing, or weight gain.
- Sometimes, a stem cell transplant does not work. This can be deadly. Have your child's blood work and other lab tests checked as you have been told by your child's doctor.

## What is this drug used for?

- It is used in some people who get a type of stem cell transplant to help the number of white blood cells increase faster and lower the risk of infection.

## What do I need to tell the doctor BEFORE my child takes this drug?

- If your child is allergic to this drug; any part of this drug; or any other drugs, foods, or substances. Tell the doctor about the allergy and what signs your child had.

This drug may interact with other drugs or health problems.

Tell the doctor and pharmacist about all of your child's drugs (prescription or OTC, natural products, vitamins) and health problems. You must check to make sure that it is safe to give this drug with all of your child's other drugs and health problems. Do not start, stop, or change the dose of any drug your child takes without checking with the doctor.

## **What are some things I need to know or do while my child takes this drug?**

- Tell all of your child's health care providers that your child is taking this drug. This includes your child's doctors, nurses, pharmacists, and dentists.
- You will need to be sure that your child is not dehydrated before getting this drug. Check with the doctor to see if you need to have your child drink extra fluids before getting this drug.
- Your child may have a chance of getting post-transplant lymphoproliferative disorder (PTLD). PTLD happens when the white blood cells grow out of control and can lead to cancer and death.
- This drug is made from umbilical cord blood and may have viruses that may cause disease. Donors are screened to lower the chance of infection. Drugs made from umbilical cord blood may also pass some rare genetic diseases. If you have questions, talk with the doctor.
- Products made from cows are also used when making this drug. These are tested to lower the chance of infection. If you have questions, talk with the doctor.
- If your child is of childbearing age, a pregnancy test will need to be done before starting this drug to make sure your child is not pregnant.

## **If your child is pregnant or breast-feeding a baby:**

- Talk with the doctor if your child is pregnant, becomes pregnant, or is breast-feeding a baby. You will need to talk about the benefits and risks to your child and the baby.

## What are some side effects that I need to call my child's doctor about right away?

**WARNING/CAUTION:** Even though it may be rare, some people may have very bad and sometimes deadly side effects when taking a drug. Tell your child's doctor or get medical help right away if your child has any of the following signs or symptoms that may be related to a very bad side effect:

- Signs of an allergic reaction, like rash; hives; itching; red, swollen, blistered, or peeling skin with or without fever; wheezing; tightness in the chest or throat; trouble breathing, swallowing, or talking; unusual hoarseness; or swelling of the mouth, face, lips, tongue, or throat.
- Signs of bleeding like throwing up or coughing up blood; vomit that looks like coffee grounds; blood in the urine; black, red, or tarry stools; bleeding from the gums; abnormal vaginal bleeding; bruises without a cause or that get bigger; or bleeding you cannot stop.
- Signs of kidney problems like unable to pass urine, change in how much urine is passed, blood in the urine, or a big weight gain.
- Signs of electrolyte problems like mood changes; confusion; muscle pain, cramps, or spasms; weakness; shakiness; change in balance; an abnormal heartbeat; seizures; loss of appetite; or severe upset stomach or throwing up.
- Shortness of breath.
- Dark urine or yellow skin or eyes.
- Call your child's doctor right away if your child has any signs of infection like fever, chills, flu-like signs, severe sore throat, ear or sinus pain, cough, more sputum or change in color of sputum, pain with passing urine, mouth sores, or a wound that will not heal. Some infections have been deadly.

## What are some other side effects of this drug?

All drugs may cause side effects. However, many people have no side effects or only have minor side effects. Call your child's doctor or get medical help if any of these side effects or any other side effects bother your child or do not go

away:

- Feeling tired or weak.

These are not all of the side effects that may occur. If you have questions about side effects, call your child's doctor. Call your child's doctor for medical advice about side effects.

You may report side effects to your national health agency.

## **How is this drug best given?**

Give this drug as ordered by your child's doctor. Read all information given to you. Follow all instructions closely.

- It is given as an infusion into a vein over a period of time.
- Other drugs may be given to help with infusion side effects.

## **What do I do if my child misses a dose?**

- This drug will be given in a health care setting.

## **How do I store and/or throw out this drug?**

- This drug will be given in a healthcare setting. You will not store it at home.

## **General drug facts**

- If your child's symptoms or health problems do not get better or if they become worse, call your child's doctor.
- Do not share your child's drug with others and do not give anyone else's drug to your child.
- Keep all drugs in a safe place. Keep all drugs out of the reach of children and pets.
- Throw away unused or expired drugs. Do not flush down a toilet or pour down a drain unless you are told to do so. Check with your pharmacist if you have questions about the best way to throw out drugs. There may be drug

take-back programs in your area.

- Some drugs may have another patient information leaflet. If you have any questions about this drug, please talk with your child's doctor, nurse, pharmacist, or other health care provider.
- If you think there has been an overdose, call your poison control center or get medical care right away. Be ready to tell or show what was taken, how much, and when it happened.
