

PATIENT & CAREGIVER EDUCATION

About Your External Beam Radiation Therapy to Your Breast or Chest Wall

This information will help you get ready for your external beam radiation therapy to your breast or chest wall at Memorial Sloan Kettering (MSK). It'll help you know what to expect and how to care for yourself before, during, and after your radiation therapy.

Read through this resource before you start radiation therapy. Use it as a source of information in the days leading up to your treatments to help you get ready.

About Radiation Therapy

Radiation therapy uses high-energy radiation to treat cancer. It works by damaging the cancer cells and making it hard for them to multiply. Your body can then naturally get rid of the damaged cancer cells. Radiation therapy also affects normal cells, but they can repair themselves in a way that cancer cells can't.

Radiation therapy takes time to work. It takes days or weeks of treatment before cancer cells start to die. They keep dying for

weeks or months after radiation therapy ends.

You can have radiation therapy before, during, or after surgery or chemotherapy.

About external beam radiation therapy

With external beam radiation therapy, a treatment machine will aim a beam of radiation directly to the tumor from outside your body. The radiation will pass through your body and destroy the cancer cells in its path. You won't see or feel it.

You may be having external beam radiation therapy to 1 or more of the following areas:

- Your breast
- Your chest wall
- The lymph nodes near your collarbone
- The lymph nodes under your arm
- The lymph nodes near your sternum (breastbone)

Your radiation oncologist and nurse will talk with you about your treatment plan.

Your role on your radiation therapy team

You'll have a team of healthcare providers working together to care for you. You're part of that team, and your role includes:

- Getting to your appointments on time.

- Asking questions and talking about your concerns. We've included a list of possible questions at the end of this resource.
- Telling someone on your radiation therapy team when you have side effects.
- Telling someone on your radiation therapy team if you're in pain.
- Caring for yourself at home by:
 - Quitting smoking if you smoke. If you want to quit, call MSK's [Tobacco Treatment Program](#) at 212-610-0507.
 - Caring for your skin following your radiation therapy team's instructions.
 - Drinking liquids following your radiation therapy team's instructions.
 - Eating the foods your radiation therapy team suggests.
 - Staying around the same weight.

Before Your Radiation Therapy

Vitamins and dietary supplements

It's OK to take a multivitamin during your radiation therapy. Don't take more than the recommended daily allowance (RDA) of any vitamin or mineral.

Don't take any other dietary supplements without talking with a member of your radiation therapy team. This includes vitamins,

minerals, and herbal or botanical remedies.

Simulation appointment

You'll have a treatment planning procedure called a simulation before you start your radiation therapy. During your simulation, your radiation therapists will take imaging scans and may mark your skin with little tattoo dots. These things are done to:

- Map your treatment area.
- Make sure you get the right dose (amount) of radiation.
- Limit the dose of radiation that gets to your nearby tissues.

Your simulation will take 60 to 90 minutes.

Getting ready for your simulation

You'll be lying in one position for during your simulation. If you think you'll be uncomfortable lying still, talk with your healthcare provider. You can also take acetaminophen (Tylenol®) or your usual pain medication before your simulation.

Wear comfortable clothes that are easy to take off. You may need to get undressed from the waist up and change into a hospital gown. Don't wear jewelry, powder, or any lotions or creams unless a member of your radiation therapy team tells you it's OK.

Remove devices from your skin

If you wear any of the following devices on your skin, the manufacturer recommends you remove it before your simulation or treatment:

- Continuous glucose monitor (CGM)
- Insulin pump

Talk with your radiation oncologist about whether you may need to remove your device before your simulation or treatment.

Make sure you have an extra device with you to put on after your simulation or treatment.

If you're not sure how to manage your glucose while your device is off, talk with the healthcare provider who manages your diabetes care before your appointment.

When you arrive

When you arrive for your simulation, a member of your radiation therapy team will check you in. Your radiation therapists will also greet you and take a photo of your face. This photo will be used to identify you throughout your treatment. Your radiation therapists will talk with you about what to expect during the simulation.

Many staff members will ask you to say and spell your full name and date of birth during your appointment. This is for your safety. People with the same or a similar name may be getting

care on the same day.

During your simulation

If you need to get undressed from the waist up and change into a hospital gown for your simulation, a staff member will bring you to the changing room. Keep your shoes on. If you wear a head covering (such as a wig, turban, or cap), you may have to take it off. **If you need help changing, tell a member of your radiation therapy team.** A care provider will help you in the changing room.

Once you're ready, your radiation therapists will help you lie on the simulation table. The table will have a sheet on it, but it's hard and doesn't have a cushion. If you haven't taken pain medication and think you might need it, tell your radiation therapists before your simulation starts.

The simulation room is usually cool. If you feel uncomfortable at any time, tell your radiation therapists. They'll do everything they can to make sure you're comfortable and have privacy. They can also play music for you to help pass the time.

Throughout your simulation, you'll feel the table move into different positions. Your radiation therapists will turn the lights in the room on and off and you'll see red or green laser lights on each wall. Your radiation therapists use these as a guide when they position you on the table. **Don't look directly into the laser.** It can damage your eyes.

Your radiation therapists will walk in and out of the room during your simulation, but someone will always be able to see and hear you. You'll hear your radiation therapists talking to each other as they work. They'll also tell you what they're doing.

Positioning

You may lie on your back or on your belly. In either position, your arm(s) will be raised above your head. Once your simulation starts, don't move. It's important to stay in the same position. If you're uncomfortable or need help, tell your radiation therapists.

Imaging scans

You'll have imaging scans of your treatment area. These may be done on an x-ray machine called a simulator or on a computed tomography (CT) scan machine (see Figure 1). These scans are only used to map your treatment. They aren't used for diagnosis or to find tumors. If you need other imaging scans, your radiation nurse will tell you what to expect.

The imaging scans will take about 45 minutes. During the scans, you'll hear the machine turn on and off. Even if the noise seems loud, your radiation therapists will be able to hear you if you talk to them.

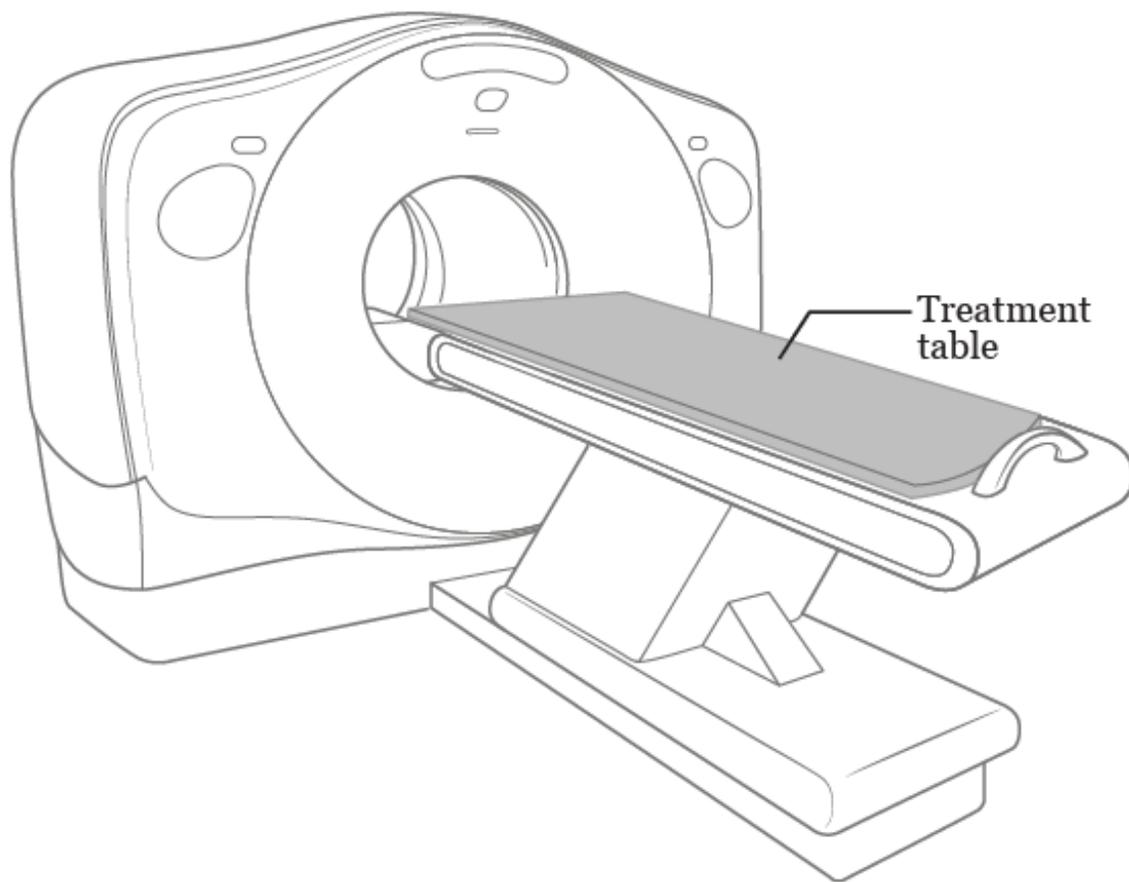

Figure 1. An example of an imaging machine

Skin markings (tattoos)

Your radiation therapists will use a felt marker to draw on your skin in the treatment area. You may also need permanent skin markings called tattoos. If you do, your radiation therapists will use a sterile needle and a drop of ink to make the tattoos. Each tattoo will feel like a pinprick. They won't be bigger than the head of a pin.

After they make the tattoos, your radiation therapists will take several photos of you in your simulation position. They'll use the photos and tattoo marks to position you correctly on the table each day of your treatment.

You can wash off the felt marking after your simulation. **The tattoos are permanent and won't wash off.** If you're concerned about having tattoos as part of your radiation treatment, talk with your radiation oncologist.

Scheduling your radiation treatments

At the end of your simulation, you'll schedule your set-up procedure and radiation appointments. You'll also be assigned to a radiation treatment machine for your radiation treatments.

If you're getting radiation therapy after a lumpectomy, you'll have radiation treatments to your whole affected breast for 3½ to 5 weeks. If you're getting radiation therapy to your chest wall or the lymph nodes near your collarbone, under your arm, or near your sternum, you'll have radiation treatments every day for 5 to 6 weeks. Your radiation oncologist will talk with you about your treatment schedule.

Your radiation treatments will be daily, Monday through Friday, for about _____ weeks.

You must come to every one of your radiation treatment appointments. Your radiation therapy may not work as well if you skip or miss treatments. If you can't come to one of your treatments for any reason, call your radiation

oncologist's office to tell your radiation team. If you need to change your schedule for any reason, speak with your radiation therapists.

Treatment planning

Between your simulation and your first radiation treatment, your radiation oncologist will work with a team to plan your radiation treatments. They'll use the imaging scans done during your simulation to plan the angles and shapes of your radiation beams. The details are carefully planned and checked. This takes 1 to 2 weeks.

Set-up procedure

You'll have a set-up procedure before your first radiation treatment. Depending on your treatment plan, you may have it on the same day as your first radiation treatment or 1 to 2 days earlier.

The set-up procedure usually takes about 1 hour. If pain medication was helpful during your simulation, you may want to take it before your set-up procedure too.

When you arrive for your set-up procedure, a staff member will show you to the changing room and ask you to change into a hospital gown. Your radiation therapists will bring you to the room where you'll get your radiation treatments each day. They'll help you lie on the treatment table in the same position you were

in during your simulation.

Your radiation therapists will take special x-rays called beam films to make sure your position and the treatment area are correct. The beam films will be repeated throughout your treatment. They aren't used to see how your tumor responds to the treatment.

During Your Radiation Therapy

On the day of your first radiation treatment, you'll start putting triamcinolone 0.1% ointment on your skin in the treatment area. This is a prescription ointment that will help protect your skin. You'll use it every day, once in the morning and once in the evening. This includes the days you don't have treatment. Your radiation nurse will give you more information about it before your first treatment.

Your radiation oncologist may also recommend using Mepitel[®] Film to protect your skin in the treatment area. If they do, put it on your skin in the treatment area before your first treatment. Keep it on until the edges start to peel up.

You'll stay in one position for about 10 to 20 minutes during each of your radiation treatments, depending on your treatment plan. If you think you'll be uncomfortable lying still, you can take acetaminophen (Tylenol) or your usual pain medication 1 hour before your appointments.

Radiation treatment appointments

When you arrive for your radiation treatment appointments, check in at the reception desk and have a seat in the waiting room. When your radiation therapists are ready for you, they'll ask you to change into a hospital gown. Keep your shoes on.

During your radiation treatments

Your radiation therapists will bring you to the treatment room and help you lie on the treatment table (see Figure 2). You'll be positioned exactly how you were during your simulation and set-up procedure. Your radiation therapists will do everything they can to make sure you're comfortable. Then, they'll leave the room, close the door, and start your treatment.

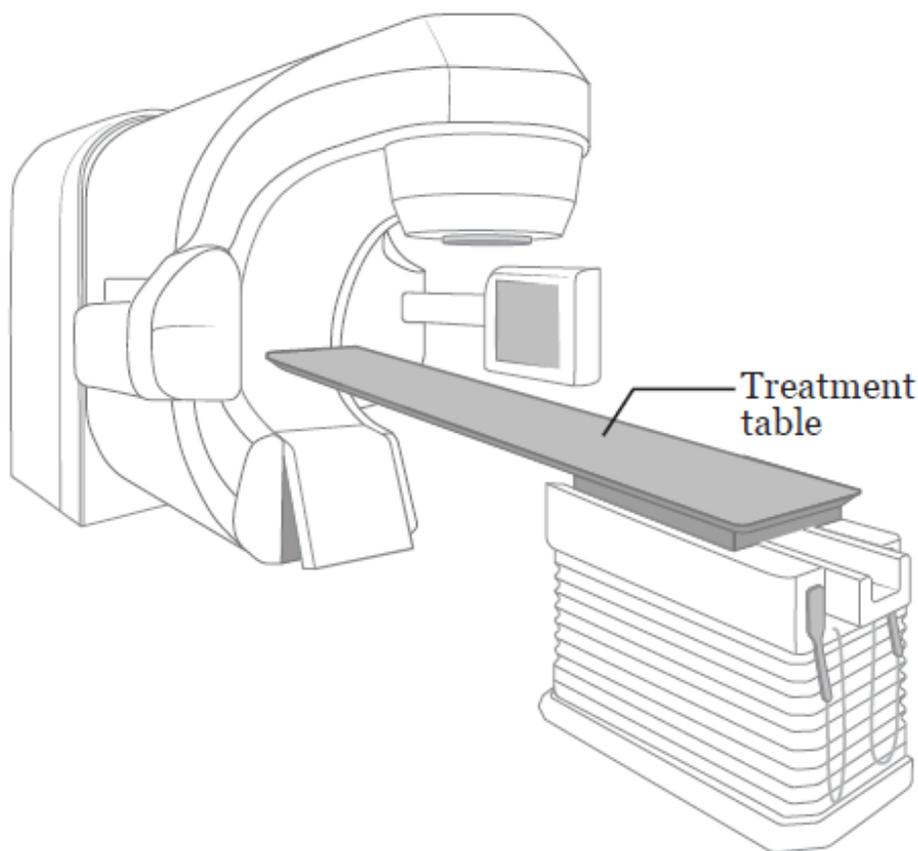

Figure 2. An example of a radiation treatment machine

Breathe normally during your treatment, but don't move. You won't see or feel the radiation, but you may hear the machine as it moves around you and is turned on and off. Your radiation therapists will be able to see you on a monitor and talk with you through an intercom during your whole treatment. Tell them if you're uncomfortable or need help.

You'll be in the treatment room for 10 to 20 minutes, depending on your treatment plan. Most of this time will be spent putting you in the correct position. The actual treatment only takes a few minutes.

Your radiation treatment won't make you or your clothes radioactive. It's safe for you to be around other people.

About boosts

If you're getting radiation therapy after a lumpectomy, you may get an extra dose of radiation called a boost after you finish the first part of your radiation therapy. During the boost, radiation will be directed to just the area where the lump or cancer cells were located instead of your whole breast.

If you're getting radiation to your chest wall or the lymph nodes near your collarbone, under your arm, or near your sternum, you may not need a boost.

During your boost appointment

Before your boost, your radiation therapist will mark your skin with a felt-tipped marker to outline the boost field. Wear a shirt that you don't mind getting stained. The dye from the marker may stain your clothes. Also, these skin markings aren't permanent. Don't wash them off until you finish treatment.

You'll get the same amount of radiation that you got for your other treatments, but it will be aimed at a smaller area. You may use a different treatment machine for your boost or lie in a different position.

Status check visits

Your radiation oncologist and nurse will see you each week to talk with you about your concerns, ask about any side effects you're having, and answer your questions. This visit will be before or after your treatments every _____. Plan to be at your treatment appointment for about 1 extra hour on those days.

During these visits, your radiation oncologist and nurse will check your skin in the treatment area. They may prescribe ointments or creams and special dressings to care for your skin.

If you need to speak with your radiation oncologist or nurse between your status check visits, call your radiation oncologist's office or ask your radiation therapists or another staff member to contact them.

Weekly emails

We'll also email you a questionnaire about your symptoms every week. This questionnaire helps your radiation therapy team know how you're doing and if you're having any side effects. You'll complete the questionnaire once a week for 8 weeks after you finish radiation therapy.

It's helpful to read the resources *Communicating With Your Healthcare Team Using MyMSK*

(www.mskcc.org/pe/communicating_using_mymsk) and *How to Take Pictures of Your Skin for Your Healthcare Provider* (www.mskcc.org/pe/pictures_skin).

Side Effects of Radiation Therapy to Your Breast or Chest Wall

You may have side effects from radiation therapy. The type and how strong they are depends on many things. These include the dose of radiation, the number of treatments, and your overall health. The side effects may be worse if you're also getting chemotherapy.

You may start to notice side effects about 2 weeks after you start radiation therapy. They may get worse during your radiation therapy, but they'll slowly get better over 6 to 8 weeks after your last treatment. Some side effects may take longer to go away. Follow the guidelines in this section to help manage your side

effects during and after your radiation therapy.

Skin and hair reactions

Your skin and hair in the treatment area will change during your radiation therapy. This is normal.

- Your skin may turn pink, red, tanned, or look like it has sunburn. The skin in the folds under your arm and breast, over your collar bone, and in other parts of the treatment area that have been in the sun may blister and peel.
- Your skin may become very sensitive and itchy.
- You may get a rash, especially in any area where your skin has been in the sun. Tell a member of your radiation therapy team if you get a rash at any time during your radiation therapy. Rashes are sometimes a sign of an infection.
- You may lose some or all of your hair under your arm on the treated side. It usually grows back in 2 to 4 months after you finish radiation therapy.

If your skin becomes open, wet, and oozing, contact your radiation team. They may prescribe a cream called Silvadene[®] (silver sulfadiazine). Your radiation oncologist may also stop your radiation therapy until your skin heals, although this is rarely needed.

Skin reactions from radiation therapy are usually strongest 1 or 2 weeks after you finish radiation therapy and then start to heal. It

often takes 3 to 4 weeks for skin reactions to heal. If you have any questions or concerns, don't hesitate to contact your radiation oncologist or nurse.

Skin care guidelines

Follow these guidelines care for your skin during treatment.

Keep following them until your skin gets better. These guidelines refer only to the skin in the treatment area.

Your radiation nurse will give you more information about caring for your skin. This may include applying ointments, creams, special dressings, or all 3. Follow their instructions.

- Bathe or shower daily using warm water and a mild unscented soap such as Neutrogena[®], Dove[®], baby soap, Basis[®], or Cetaphil[®]. Rinse your skin well and pat it dry with a soft towel.
- You can use deodorant on intact (not broken) skin in the treatment area. Stop using it if your skin becomes irritated.
- When washing, be gentle with your skin in the treatment area. Don't use a washcloth, scrubbing cloth, or brush.
- The tattoo marks you got before your treatment are permanent and don't wash off. You may get other markings during treatment, such as an outline of your treatment area with a purple felt-tipped marker. You can remove these markings with mineral oil when your radiation therapists say

it's OK.

- Apply a thin layer of 0.1% triamcinolone ointment to the treatment area 2 times every day. You don't need to remove the ointment before your radiation treatments. Keep using the 0.1% triamcinolone ointment 2 times every day until 2 weeks after you finish radiation therapy.
- **Don't use alcohol or alcohol pads on your skin in the treatment area.**

Avoid irritating your skin in the treatment area

- Wear loose-fitting cotton clothing and undergarments in the treatment area. Avoid tight clothing that will rub up against your skin, including underwire bras.
- Don't use makeup, perfumes, powders, or aftershave in the treatment area.
- Don't put tape on your skin in the treated area.
- If your skin is itchy, don't scratch it. Keep using the 0.1% triamcinolone ointment 2 times every day. This is the best treatment for itching.
- Avoid shaving in the treatment area. If you must shave, use only an electric razor. Stop if your skin becomes irritated.
- Don't let your treated skin come into contact with extreme hot or cold temperatures. This includes hot tubs, water bottles, heating pads, and ice packs.

- If you don't have any skin reactions during your treatment, you can swim in a chlorinated pool. Rinse off the chlorine right after getting out of the pool.
- Avoid tanning or burning your skin during treatment and for the rest of your life. If you're going to be in the sun, use a PABA-free sunblock with an SPF of 30 or higher. Wear loose-fitting clothing that covers as much of your skin as possible.

Breast discomfort or swelling

You may have some tenderness in your breast on your affected side, especially at your nipple. You may also develop extra fluid in your breast that may cause sharp, stabbing sensations. Your breast or chest may feel heavy or swollen. Your shoulder on your affected side may also feel stiff.

These sensations can start within the first few days of your radiation therapy. They can go on for many months after you finish radiation therapy. Below are suggestions to help you reduce this discomfort.

- If you wear bras, you may want to choose soft, loose bras without an underwire. Sports bras or cotton bras are good choices. You may even find it more comfortable to not wear a bra at all.
- Take pain medications such as nonsteroidal anti-inflammatory drugs (NSAIDs) as needed. Some examples of NSAIDs are ibuprofen (Advil®) and naproxen (Aleve®). If you can't take an

NSAID, you can take acetaminophen (Tylenol) instead.

Fatigue

Fatigue is feeling tired or weak, not wanting to do things, not being able to concentrate, feeling slowed down, or lacking energy.

You may develop fatigue after 2 to 3 weeks of radiation treatments. The fatigue can range from mild to severe, and it may be worse at certain times of day. Your fatigue will gradually go away after you finish radiation therapy, but it can last for several months.

There are a lot of reasons why you may have fatigue during your radiation therapy, including:

- Your radiation treatments' effects on your body.
- Traveling to and from your radiation treatment appointments.
- Not getting enough restful sleep at night.
- Not eating enough protein and calories.
- Having pain or other symptoms.
- Feeling anxious or depressed.
- Side effects of certain medications.

Managing fatigue

- If you're working and are feeling well, it's OK to keep working. If you feel fatigued, working less may help you have more energy.
- Plan your daily activities. Pick the things you need or really want to do and do them when you have the most energy. For example, you may go to work but not do housework or watch your children's sports event but not go out to dinner.
- Plan time to rest or take short (10 to 15-minute) naps during the day, especially when you feel more tired.
- Try to sleep at least 8 hours every night. This may be more sleep than you needed before you started radiation therapy. You may also find it helpful to:
 - Go to sleep earlier at night and get up later in the morning.
 - Be active during the day. For example, if you're able to exercise, you could go for a walk, do yoga, or ride a bike.
 - Relax before going to bed. For example, read a book, work on a jigsaw puzzle, listen to music, or do a calming hobby.
- Ask family and friends to help you with chores and errands. Check with your insurance company to see if they cover home care services.
- Some people have more energy when they exercise. Ask your radiation oncologist if you can do light exercise, such as

walking, stretching, or yoga. Read the resource *Managing Cancer-Related Fatigue with Exercise*

(www.mskcc.org/pe/fatigue_exercise) for more information.

You can find it online or ask a member of your radiation therapy team for a copy.

- Eat foods and drink liquids that are high in protein and calories. Read the resource *Eating Well During Your Cancer Treatment* (www.mskcc.org/pe/eating_cancer_treatment) or *Nutrition and Breast Cancer: Making Healthy Diet Decisions* (www.mskcc.org/pe/nutrition_breast_cancer) for more information. You can find them online or ask a member of your radiation therapy team for a copy.

Symptoms such as pain, nausea (feeling like you're going to throw up), diarrhea (loose or watery bowel movements), trouble sleeping, or feeling depressed or anxious can increase your fatigue. Ask your radiation oncologist or nurse for help with any other symptoms you may have.

Sexual and reproductive health

You can be sexually active during your radiation therapy unless your radiation oncologist gives you other instructions. You won't be radioactive or pass radiation to anyone else. If you or the person you're sexually active with can get pregnant, it's important to use birth control (contraception) during your radiation therapy.

You might have concerns about how cancer and your treatment can affect your sex life. Talking with your healthcare provider about your sexual health can be hard, but it's an important conversation to have. They may not discuss this with you unless you bring up your questions and concerns. While you may feel uncomfortable, remember that most people in cancer treatment have similar questions. We work hard to make sure everyone in our care feels welcome.

MSK also has sexual health programs to help you manage the ways your cancer or cancer treatment affect your sexual health. Our specialists can help you take action and address sexual health or fertility before, during, or after your treatment.

- For information about our [Female Sexual Medicine & Women's Health Program](#) or to make an appointment, call 646-888-5076.
- For information about our [Male Sexual & Reproductive Medicine Program](#) or to make an appointment, call 646-888-6024.
- For information about our [Cancer and Fertility Program](#), talk with your healthcare provider.

For more information about your sexual health during cancer treatment, read the resource *Sex and Your Cancer Treatment* (www.mskcc.org/pe/sex_cancer_treatment). You can find it

online or ask your healthcare provider for a copy. The American Cancer Society also has resources about sexual health issues during cancer treatment titled *Sex and the Adult Male with Cancer* and *Sex and the Adult Female with Cancer*. You can search for them at www.cancer.org or call 800-227-2345 for a copy.

Emotional health

Cancer diagnosis and treatment can be very stressful and overwhelming. You may feel:

- Anxious
- Angry
- Nervous
- Afraid
- Depressed
- Numb
- Alone
- Helpless
- Worried
- Ambivalent
- Frustrated

When you or someone you love has a serious illness, all of these kinds of feelings are expected. You might also worry about telling your employer that you have cancer or about paying your medical bills. You may worry about how your family relationships may change, how cancer treatment will affect your body, or if you'll continue to be sexually attractive. You may worry that the cancer will come back. It's normal and OK to worry about all these things. We're here to support you.

Ways to cope with your feelings

Talk with others. When people try to protect each other by hiding their feelings, they can feel very alone. Talking can help the people around you know what you're thinking. It might help to talk about your feelings with someone you trust, such as your spouse or partner, close friend, family member, chaplain (spiritual counselor), nurse, social worker, or psychologist.

You may also find it helpful to talk with someone who's going through radiation therapy or who has been through a similar treatment. Through our [Patient and Caregiver Support Program](#), you can talk with former patients and caregivers. Call 212-639-5007 to learn more about this service.

Join a support group. Meeting other people with cancer will give you a chance to talk about your feelings and learn from others. You can understand how other people cope with their cancer and treatment and be reminded you aren't alone.

All cancer diagnoses and people with cancer aren't the same. We offer support groups for people who share similar diagnoses or identities. For example, you can join a support group for people with breast cancer or a group for LGBTQ+ people with cancer. To learn about MSK's support groups, visit www.mskcc.org/vp or talk with your radiation oncologist, radiation nurse, or social worker.

Try relaxation and meditation. You might try thinking of

yourself in a favorite place and breathing slowly while paying attention to each breath or listening to a soothing music or sound. For some people, praying is another form of meditation. These kinds of activities can help you feel relaxed and calm. Visit www.mskcc.org/meditations to find guided meditations led by our Integrative Medicine providers.

Exercise. Many people find that light activity, such as walking, biking, yoga, or water aerobics, helps them feel better. Talk with your healthcare provider about types of exercise you can do.

We all have our own way of dealing with difficult situations. Generally, we use whatever has worked for us in the past. But sometimes this isn't enough. We encourage you to talk with your doctor, nurse, or social worker about your concerns.

After Your Radiation Therapy

Please keep filling out the weekly surveys that you'll get via email.

Follow-up appointments

It's important to come to all your follow-up appointments with your radiation oncologist. During these appointments, they'll check to see how the cancer and your body is responding to your radiation therapy.

Write down your questions and concerns before your follow-up appointments. Bring this and a list of all your medications with

you. You can also call your radiation oncologist or nurse at any time after you finish radiation therapy or between your follow-up visits if you have any questions or concerns.

At some point, your radiation oncologist may transfer your care to a survivorship nurse practitioner (SNP). The SNP is a member of the MSK Breast Cancer team. They work closely with your radiation oncologist. As your needs decrease, your SNP and radiation oncologist may transfer your follow-up care to your local doctor. The timing for this will depend on your particular cancer and treatment plan.

Vitamins and dietary supplements

If you took dietary supplements (such as vitamins or herbal remedies) before your treatment, you can start taking them again 1 month after your last radiation treatment. If you'd like to speak with a clinical dietitian nutritionist about your diet or supplements, ask your nurse to arrange this.

When to Call Your Radiation Oncologist or Nurse

Call your radiation oncologist or nurse if:

- You have a fever of 100.4 °F (38 °C) or higher.
- You have chills.
- Your skin is painful, peeling, blistering, moist, or weepy.

- You have discomfort in the treatment area.
- Your breast, underarm (armpit), or arm is getting more swollen.
- You have any new or unusual symptoms.

Contact Information

If you have any questions or concerns, talk with a member of your radiation therapy team. You can reach them Monday through Friday from 9:00 AM to 5:00 PM at the numbers listed below.

Radiation oncologist: _____

Phone number: _____

Radiation nurse: _____

Phone number: _____

After 5:00 PM, during the weekend, and on holidays, call 212-639-2000. Ask for the radiation oncologist on call.

Support Services

You can find many of these support services on the Internet. If you don't have a computer or don't know how to use the Internet, check with your local public library or community center.

MSK support services

Counseling Center

646-888-0200

Many people find that counseling helps them. We provide counseling for individuals, couples, families, and groups, as well as medications to help if you feel anxious or depressed. To make an appointment, ask your healthcare provider for a referral or call the number above.

Integrative Medicine Service

646-888-0800

MSK's Integrative Medicine Service offers patients many services to complement traditional medical care. These include music therapy, mind/body therapies, dance and movement therapy, yoga, and touch therapy.

Nutrition Services

212-639-7312

MSK's Nutrition Service offers nutritional counseling with one of our certified dietitians. Your dietitian will review your current eating habits and give advice on what to eat during and after treatment.

Patient and Caregiver Support Program

212-639-5007

You might find it comforting to talk with a cancer survivor or caregiver who has been through a similar treatment. Through

our Patient and Caregiver Support Program, we're able to offer you a chance to talk with former patients and caregivers.

Resources for Life After Cancer (RLAC) Program

646-888-8106

At MSK, care doesn't end after active treatment. The RLAC Program is for patients and their families who have finished treatment. This program has many services, including seminars, workshops, support groups, counseling on life after treatment, and help with insurance and employment issues.

Tobacco Treatment Program

212-610-0507

If you want to quit smoking, MSK has specialists who can help. Call for more information.

Radiation therapy support services

American Society for Therapeutic Radiology and Oncology

www.rtanswers.org

800-962-7876

A group of radiation oncology professionals that specializes in treating patients with radiation therapy. Provides detailed information on treating cancer with radiation and contact information for radiation oncologists in your area.

External resources

There are many other support services available to help you before, during, and after your cancer treatment. Some offer support groups and information, while others can help with transportation, lodging, and treatment costs.

For a list of these support services, visit www.mskcc.org/pe/external_support_services. You can also talk with an MSK social worker by calling 212-639-7020.

Questions to Ask Your Healthcare Provider

Before your appointment, it's helpful to write down the questions you want to ask your healthcare provider. Examples of questions you can ask are listed below. Write down the answers during your appointment so you can review them later.

What kind of radiation therapy will I get?

How many radiation treatments will I get?

What side effects should I expect during my radiation therapy?

Will these side effects go away after I finish my radiation therapy?

What kind of late side effects should I expect after my radiation therapy?

For more resources, visit www.mskcc.org/pe to search our virtual library.

About Your External Beam Radiation Therapy to Your Breast or Chest Wall - Last updated on July 19, 2021
