Memorial Sloan Kettering nurse practitioner Carol Ann Milazzo describes side effects commonly associated with radiation therapy to the bone. Radiation can cause patients to feel temporarily fatigued, or have a transient worsening of pain. Because radiation travels through the skin, it may cause the treated area to look and feel sunburned – a condition called radiation dermatitis.

Patients may want to ask their doctors about how to manage these potential side effects during and immediately after radiation.
If you have any questions, contact a member of your healthcare team directly. If you're a patient at MSK and you need to reach a provider after 5:00 PM, during the weekend, or on a holiday, call 212-639-2000.
