Give to MSK

Having experts in different specialties ensures that all possible approaches to your treatment are considered and that your care is well coordinated and personalized.

Our approach to diagnosing and treating esophageal cancer draws on the latest research breakthroughs and advances in medicine.

We have a monitoring program for people with Barrett's esophagus, which is associated with esophageal cancer.

Our doctors use advanced methods for looking at tumors and getting rid of them without surgery. Our surgeons are experts in minimally invasive surgical procedures, including robotic surgery, that reduce injury to the chest.

Our radiation oncologists use highly precise technologies to shrink tumors while avoiding injury to healthy tissue.

We use molecular and genetic information to determine the treatments that are most likely to help individual patients.

We have experts in all areas that are important for treating esophageal cancer, so we can provide therapies for all stages of disease.
