What is a clinical trial?

Clinical trials are research studies that test new treatments, procedures, or devices to see how well they work. They are an important part of helping to prevent, treat, and cure cancer. Almost every cancer treatment given to patients was first tested during a clinical trial.

Head and neck surgeons Jennifer Cracchiolo and Brian Untch lead research on new treatments and methods for head and neck cancers.

MSK tests new treatments for head and neck cancer. Treatment trials test new drugs, drug combinations, devices, and ways of doing procedures, surgery, or radiation therapy.

Sometimes a clinical trial gives you access to new therapies that are not yet available at most hospitals. Talk with your doctor about whether joining a clinical trial is right for you. You can also learn more by watching this short video about MSK clinical trials.

Clinical trials are designed to answer questions about:

- Safety
- Benefits
- Side effects
- Whether some people are helped more than others

MSK will start a clinical trial only if our researchers think we can improve methods for cancer:

- Prevention

- Treatment
- Diagnosis
- Screening

Clinical trials you may be able to join

Our doctors are running clinical trials testing:

- New drug therapies for head and neck cancer, including immunotherapies and targeted therapies. These can help treatments work better.
- Safer, better methods to head and neck radiation therapy
- Better ways of keeping your quality of life during and after treatment

Talk with our experts about whether a clinical trial is right for you. Here are some new clinical trials you may be able to join:

- [A Phase 2 Study of Lenvatinib and Pembrolizumab Immunotherapy in People With Advanced Adenoid Cystic Carcinoma and Other Salivary Gland Cancers](#)
- [A Phase 1 Study of REM-422 in People With Adenoid Cystic Cancer](#)
- [A Phase 2 Study of Ado-Trastuzumab Emtansine in People With Salivary Gland Cancer](#)
