[Annual report](#)

[Give to MSK](#)

that you use this tool in consultation with your doctor.

## Why Is This Tool Useful?

Understanding the risk of renal cell carcinoma recurrence is important because it is a key factor in deciding whether a patient requires additional treatment. This nomogram can help doctors and patients to develop the best treatment plan following surgery.

## What Information Will You Need?

In order for this nomogram to provide an accurate prediction, you will need to include accurate values for all of the information below.

Histology: Cell type found from tissue removed during surgery.

Symptoms: Extent throughout the body.

1997 pathology tumor stage: Pathologist's assessment of tumor progression for kidney cancer.

Tumor size: 0.001 to 20 cm.

To better understand the results of the nomogram, patients should discuss the results of the nomogram with their doctors.

Use our [renal cell carcinoma nomogram](#).

## Contact Us

If you have questions or comments, please contact us at [nomograms@mskcc.org](mailto:nomograms@mskcc.org).

## Request an Appointment

Call [800-525-2225](tel:800-525-2225)

Available Monday through Friday, 8 a.m. to 6 p.m. (Eastern time)
