volumetric CT, which produces visual representations in three dimensions

dynamic contrast-enhanced MRI, a technique using rapid imaging and a contrast material that, when combined with ultrasound, makes certain organs, blood vessels, or tumors easier to see

nuclear imaging, which produces images of different parts of the body

The Fibrolamellar-Hepatocellular Carcinoma Consortium

We're determined to improve treatment options for people with the primary liver cancer fibrolamellar-hepatocellular carcinoma (FLL-HCC). We lead a collaborative initiative with colleagues at Johns Hopkins University and the University of California, San Francisco, with the aim of:

promoting awareness about FLL-HCC within the cancer community

developing new therapies for the disease

pooling information on patients in order to document trends in diagnosis, treatment, and survival

Liver Cancer Clinical Trials

Clinical trials test new drugs and drug combinations, surgical techniques, diagnostic technologies, and strategies for preserving quality of life for people undergoing treatment. Our experts can help determine if clinical trials are right for you. The following liver cancer clinical trials at MSK are currently enrolling new patients. To learn more about a study, choose from the list below.
