[Give to MSK](#)

cancer cells' shape and other features.

Knowing the [type of lung cancer](#) you have helps your doctors accurately [stage the tumor](#). Each type responds differently to certain chemotherapy drugs. Once they know the cancer type and stage, your care team can choose the best treatment.

Personalized Medicine for Lung Cancer

In addition to pathology tests, MSK performs molecular testing of tumors in all patients with non-small cell lung cancer. We are one of only a few hospitals in the world to offer this type of personalized medicine.

[Learn more about personalized medicine.](#)

Research on Early Diagnosis

MSK experts are investigating other non-invasive early cancer detection methods apart from CT or PET imaging of the tumor. These include looking for lung cancer markers in a person's exhaled breath, as well as examining small pieces of tumor DNA in a patient's blood (liquid biopsy) using a test called [MSK Access](#).
