Medical oncologist Matthew Matasar leads a clinic specially designed to help lymphoma survivors address any long-term health conditions that might arise.

Memorial Sloan Kettering, we know that a diagnosis of cancer affects you and your loved ones in many different ways. We're committed to supporting you and maintaining your well-being in every way we can — physically, emotionally, spiritually, and otherwise — for as long as you need us.

Our doctors work closely with a team of specialists who address various needs that may arise during diagnosis, treatment, and survivorship of a patient with lymphoma.

Survivorship

Thanks to major advances in the understanding and treatment of lymphoma, more people than ever are enjoying productive lives for years, sometimes decades, after being declared free of the disease. But even with improvements in delivering treatments like chemotherapy and radiation, lymphoma patients may be at higher risk for heart disease, skin cancer, lung conditions, and other complications.

Lymphoma Survivorship Clinic

Recognizing that some lymphoma patients develop long-term health conditions, MSK established a program to quickly identify and address these issues. Our Lymphoma Survivorship Clinic welcomes MSK survivors of all ages, as well as people initially treated for the disease at other institutions. Housed within the Lymphoma Service at MSK's [64th Street Outpatient Center](#), the clinic focuses solely on survivors of lymphoma, as soon as three years after you end treatment.

Depending on the types of treatment you received and your general health when you were diagnosed with lymphoma, we monitor for:

- heart disease
- the development of second cancers, such as leukemia or breast, lung, or skin cancer
- thinking and memory problems (commonly known as “chemobrain”)
- lung health
- bone health
- stroke
- problems with teeth and gums
- reduced thyroid function
- dry eyes, cataracts, and other eye issues
- emotional and psychological health

These experts are at the top of their field in survivorship issues, such as heart, lung, and reproductive health. The clinic is also able to offer access to clinical trials and other research that can help people facing the late effects of lymphoma treatment.
