MSK is also exploring [tumor-infiltrating lymphocyte \(TIL\) therapy](#) for people with melanoma. TIL therapy is a type of immunotherapy that uses a patient's immune cells to kill cancer. When we give TIL therapy, we remove the patient's immune cells from their tumor after surgery and give the cells a treatment that makes them multiply. We then put the cells back into the body to find and attack cancer cells.

Our doctors can help you decide if one of our clinical trials of TIL therapy is right for you:

[22-230 A Phase I/II Study of IOV-4001 in People with Inoperable or Metastatic Melanoma or Non-Small Cell Lung Cancer](#)

[22-198 Expanded Access to Lifileucel to Treat Inoperable or Metastatic Melanoma](#)
