FOR THE MEDIA

These research studies evaluate the safety and effectiveness of new ways to diagnose and treat mesothelioma. They can also give your treatment team information about your current plan of care. Promising approaches that we've looked at so far include tumor vaccines, antibody therapies, T cell-based treatments, molecularly targeted medications, and the use of anticancer viruses.

Here you can find a continually updated listing of MSK's current clinical trials for mesothelioma. To learn more about a study, choose from the list below.
