[Annual report](#)

[Give to MSK](#)

Soft tissue sarcoma tends to recur within the first three years after treatment. After five years, it is uncommon for soft tissue sarcoma to come back. At MSK, we usually monitor people for at least ten years and often for life. This approach enables us to keep you healthy by acting quickly if we see any signs of the disease returning.

If you had a large sarcoma or an aggressive type of sarcoma, we may recommend more frequent checkups.

Once you have completed treatment for soft tissue sarcoma, you'll stay in close touch with your care team.
