work. They are an important part of helping to prevent, treat, and cure cancer. Almost every cancer treatment given to patients was first tested during a clinical trial.

MSK tests new treatments for stomach cancer. Treatment trials test new drugs, drug combinations, devices, and ways of doing procedures, surgery, or radiation therapy.

Sometimes a clinical trial gives you access to new therapies that are not yet available at most hospitals. Talk with your doctor about whether joining a clinical trial is right for you.

Clinical trials are designed to answer questions about:

- Safety
- Benefits
- Side effects
- Whether some people are helped more than others

MSK will start a clinical trial only if our researchers think we can improve methods for cancer:

- Prevention
- Treatment
- Diagnosis
- Screening

For more information, please read [Clinical Trials at MSK: What You Need to Know](#).

## Clinical trials you may be able to join

MSK is researching better ways to identify what can raise the risk of getting gastric cancer. We're gathering important information in a research project. You may be able to join our Hereditary Gastric Cancer Registry and Gastric Precursor Registry.

You may be able to join clinical trials. You can see a current listing of MSK's clinical trials for stomach cancer below.
