Getting a Second Opinion

Many women come to us for a second opinion following a diagnosis of uterine cancer. Our experienced team will review pathology slides, imaging tests, and other findings to help build a treatment plan customized to you.

Our innovative approach to identifying and removing only the necessary lymph nodes during surgery is an option that many women with [early-stage uterine cancer](#) select.

For women whose cancers are more advanced and require additional treatments following surgery, our medical oncologists are investigating chemotherapy regimens using novel drugs and drug combinations through our [clinical trials](#).

We may also test cells to determine if they contain hormone receptors that may help slow the growth of cancer cells. For example, uterine cancers that contain receptors for progesterone tend to grow and spread more slowly than cancers without these receptors.

Preserving Fertility

In many cases, we also have options for women with uterine cancer who have not yet gone through menopause and who would like to consider becoming pregnant at some point. MSK [fertility program](#) specialists can provide options for taking steps to preserve fertility before undergoing treatment.

Why Black Women Are Twice as Likely to Die of Endometrial Cancer — and What MSK Is Doing to Change It

Learn why Black women face a higher risk of death from endometrial cancer, and about a new effort led by Dr. Carol Brown at Memorial Sloan Kettering Cancer Center to close the gap.
