Dr. Daniel Gorovets (Associate Program Director) and Dr. Nikhil Mankuzhy (Radiation Oncology Resident) performing a prostate brachytherapy implant.

Radiation oncologist Dr. Samuel Bakhoun discusses the impact of chromosomal instability on cancer evolution and progression with Dr. Morgan Freret, one of our graduating residents.

Radiation oncologist Dr. Simon Powell demonstrates the value of VMAT with simultaneous integrated boost for node positive breast cancer to Dr. Alex Goglia.

Radiation oncologist Dr. Simon Powell helps Dr. Gustav Cederquist complete breast cancer volumes using MIM software.

Former resident and now faculty member Dr. Amy Xu presenting an patient's MR spine to radiation oncologist Dr. Simon Powell.

Throughout their four years of training, our residents work one-on-one with leaders in clinical radiation oncology, medical physics, translational research, and basic science. Residents become highly trained in modern radiotherapy techniques, including proton therapy, radiosurgery, image-guided radiotherapy, brachytherapy, and procedures such as intraoperative radiation therapy, total body irradiation, and total skin electron beam therapy.

As part of training in a comprehensive cancer center, residents also routinely learn from experts in surgical oncology, medical oncology, and translational medicine. A dedicated year of protected research time provides residents an opportunity to participate in scholarly clinical and/or laboratory research.

Our graduates leave this program well prepared to become leaders in radiation oncology.

Our Mission

We train future leaders in radiation oncology by providing a collaborative, multidisciplinary clinical and academic experience at one of the world's premier cancer centers.

We seek to equip our graduates with the skills needed to diagnose and treat both common and rare oncological conditions; to become innovators in clinical, translational, and laboratory-based research; and to provide superior care to future patients.
