Education

The Johns Hopkins University

Current Research Interests

Dr. Zauber's primary research focus is identifying and assessing ways to prevent and reduce the burden of colorectal cancer incidence and mortality, specifically through screening and surveillance. Her work involves population-based statistical modeling and precision medicine to identify effective and cost-effective screening strategies to better inform health policy and randomized clinical trials. Dr. Zauber leads the Cancer Intervention and Surveillance Modeling Network (CISNET) colorectal group, a multi-center group of microsimulation modelers sponsored by the National Cancer Institute. Her team conducted decision analyses for the 2008, 2016, and 2020 United States Preventive Services Task Force's colorectal cancer screening recommendations on optimal age to begin and end screening, screening intervals, and screening modalities. Additionally, her modeling group conducted a decision analysis for the American Cancer Society (ACS) for age to begin screening given the rising incidence rates for colorectal cancer in younger cohorts, which resulted in the ACS recommendation to begin screening at age 45. The CISNET decision analyses have also informed colorectal cancer screening strategies for higher risk populations such as those with Cystic Fibrosis and Lynch Syndrome. Dr. Zauber and her CISNET team have worked closely with the Centers for Medicare and Medicaid Services and the Centers for Disease Control and Prevention on colorectal cancer screening and prevention, and the cost-effectiveness of available and novel screening tests on average and genetically predisposed (high risk) populations. Currently, her group is partnering with the New Hampshire Colonoscopy Registry to elucidate the natural history of the serrated pathway, and how this understanding may lead to updated policies on screening and surveillance. Dr. Zauber is also a leader in screening studies. She was the Principal Investigator for the National Colonoscopy Study, a multi-center randomized controlled trial for screening colonoscopy and fecal occult blood testing and serves as a co-Principal Investigator on the NCI PROSPR I consortium. She demonstrated in the landmark National Polyp Study that removal of adenomas, the precursor lesion of colorectal cancer, reduces both incidence and mortality of colorectal cancer. She has also served on the advisory panel for the colorectal cancer screening recommendations for the International Agency for Cancer Research. Additionally, Dr. Zauber continues to serve as biostatistician on many national and international studies including the Nordic-European Initiative on Colorectal Cancer and serves as the statistical editor for *Gastroenterology* and other high impact journals. She is a Fellow of the American Statistical Association and of the American Gastroenterology Association.

Disclosures

Doctors and faculty members often work with pharmaceutical, device, biotechnology, and life sciences companies, and other organizations outside of MSK, to find safe and effective cancer treatments, to improve patient care, and to educate the health care community.

MSK requires doctors and faculty members to report (“disclose”) the relationships and financial interests they have with external entities. As a commitment to transparency with our community, we make that information available to the public.

Ann Zauber discloses the following relationships and financial interests:

American Gastroenterological Association (AGA)

Professional Services and Activities

National Institutes of Health (NIH)

Professional Services and Activities

UK Cancer Research Institute

Professional Services and Activities

The information published here is for a specific annual disclosure period. There may be differences between information on this and other public sites as a result of different reporting periods and/or the various ways relationships and financial interests are categorized by organizations that publish such data.

This page and data include information for a specific MSK annual disclosure period (January 1, 2022 through disclosure submission in spring 2023). This data reflects interests that may or may not still exist. This data is updated annually.

Learn more about MSK’s COI policies [here](#). For questions regarding MSK’s COI-related policies and procedures, email MSK’s Compliance Office at ecoi@mskcc.org.
