Current Research Interest

Dr. Drill's area of expertise lies in using statistical and computational approaches to applied research in cancer genomics. She has considerable experience with analyses of data from targeted sequencing platforms (including MSK IMPACT and HEME-PACT), as well as individual genome-wide platforms, such as RNA-Seq, gene expression arrays, and methylation assays. In addition, she has particular experience with integrative genomic analysis incorporating multiple genomic platforms, including large data sets from The Cancer Genome Atlas. She also collaborates with Lymphoma department physicians on clinical trial and observational study design and analysis.
