## Education

Columbia University

## Current Research Interests

Dr. Panageas is involved in the analysis of cluster correlated data and random effects models in the context of health services research. She is currently involved in developing a framework for hospital profiling in cancer care in collaboration with colleagues from the Center for Health Policy and Outcomes. Profiling hospitals and/or physicians based on the quality of care they provide to patients is a priority for policy makers, payers, and the public. Her future research in this area involves evaluating risk-standardized outcomes as performance metrics after major cancer surgery across all US hospitals. The goal is to recommend a practical and technically sound statistical approach that is credible and transparent to identify providers as good or poor performers in relation to benchmarks of performance. Dr. Panageas primarily collaborates with clinical investigators from the Melanoma and Integrative Medicine Services and the Departments of Neurology and Neurosurgery to design and analyze prospective and retrospective studies to evaluate treatment strategies including immuno-therapies, explore various biomarkers, develop prediction models and develop models to estimate the risk of developing distant metastasis or local tumor. She serves as the lead of the statistical core for the AACR GENIC BPC multi institutional pan-cancer effort to link comprehensive clinical data from the electronic health record to genomic data to yield an observational data source from an estimated 50,000 patients. She serves as the co-PI along with Drs Robert Daly and Jun Mao of the Connected Care Program to study remote hospital discharge as well as co-PI with Dr Eli Diamond to evaluate the unmet supportive care needs of patients with Erdheim-Chester Disease as well as their informal caregivers. She serves on the editorial board of *Clinical Cancer Research*, *JNCI*, *JNCI Cancer Spectrum* and *Journal of Hospital Management and Health Policy*.

## Disclosures

Members of the MSK Community often work with pharmaceutical, device, biotechnology, and life sciences companies, and other organizations outside of MSK, to find safe and effective cancer treatments, to improve patient care, and to educate the health care community. These activities outside of MSK further our mission, provide productive collaborations, and promote the practical application of scientific discoveries.

MSK requires doctors, faculty members, and leaders to report (“disclose”) the relationships and financial interests they have with external entities. As a commitment to transparency with our community, we make that information available to the public. Not all disclosed interests and relationships present conflicts of interest. MSK reviews all disclosed interests and relationships to assess whether a conflict of interest exists and whether formal COI management is needed.

Katherine Panageas discloses the following relationships and financial interests:

- Springworks Therapeutics  
Equity
- Vincerx Pharma, Inc.  
Equity

The information published here is a complement to other publicly reported data and is for a specific annual disclosure period. There may be differences between information on this and other public sites as a result of different reporting periods and/or the various ways relationships and financial interests are categorized by organizations that publish such data.

---

This page and data include information for a specific MSK annual disclosure period (January 1, 2024 through disclosure submission in spring 2025). This data reflects interests that may or may not still exist. This data is updated annually.
