Annual report

Give to MSK

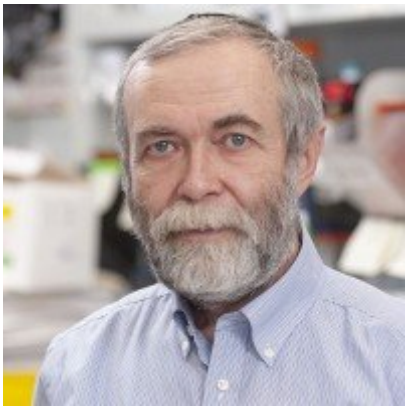

Yehuda Goldgur
Director

The structural biology facility supports both the structural biology laboratories and other laboratories that can use structural approaches such as cryo-electron microscopy, x-ray crystallography and molecular modeling as tools to address questions in their research programs. The facility provides and maintains in-house equipment for data collection, processing and structure determination; implements a wide range of cryoEM, crystallographic and structure analysis software packages; has access to state-of-the-art electron microscopes and synchrotron beamlines; and provides training and technical assistance to users of both

the in-house and remote facilities.
