

Accepting Applications: 2024 Faculty Recruitment Search

The SKI Developmental Biology Program is accepting tenure track faculty applications including for candidates focused on stem cell biology.

Deadline: October 18, 2024.

[Apply now](#)

To achieve these goals the CSCB will bring together scientists across various programs with a broad range of expertise in the following areas: cancer pathogenesis, cell biology, chemical biology, computational biology, developmental biology, and pharmacology. These partnerships will facilitate research projects that transcend traditional departmental boundaries to explore the full potential of stem cells, ranging from basic developmental studies to the use of human stem cells in drug discovery. Another core mission of the CSCB is the training of investigators in stem cell technologies such as induced pluripotency, directed differentiation, genetic modification, and prospective purification of stem cells. Finally, the CSCB links stem cell efforts at Memorial Sloan Kettering with the Tri-Institutional Stem Cell Initiative, a collaborative program of Memorial Sloan Kettering, The Rockefeller University, and Weill Cornell Medical College, as well as with other national and international stem cell organizations.
