## We are here to help.

At Memorial Sloan Kettering, cancer care is what we know best and the only thing that we do. As one of the world's most respected comprehensive centers devoted exclusively to cancer, we've been caring for people with this disease for a very long time — more than 135 years. We keep our patients at the center of all of our work and we're constantly thinking about how we can support you and your loved ones at every turn.

We know more about cancer than ever before — and the outlook has never been better. Today more than half of all people diagnosed with cancer can be cured, and many others will live long lives even with cancer. As pioneers in research, we offer you the best available treatment for your exact condition.

[Immunotherapy](#) is one of the most promising ways to treat cancer today. In fact, immunotherapy was born at MSK more than a century ago. Our physician-scientists have been at the forefront in implementing groundbreaking immune therapies, including [\(CAR\) T cell therapy](#) and the development of drugs known as checkpoint inhibitors. For some cancers, this can be a highly effective alternative to chemotherapy.

MSK researchers are continually making scientific discoveries in genetics. Our targeted tumor sequencing test, [MSK-IMPACT™](#) (Integrated Mutation Profiling of Actionable Cancer Targets), was designed to detect gene mutations and other critical genetic aberrations in both rare and common cancers. Available exclusively to MSK patients, this test can provide results that help rule out treatment options that may be ineffective and potentially lead to new therapies targeting to genetic mutations.

## Our Team Approach to Care

As an MSK patient, you will be matched with a team of devoted doctors, nurses, and other specialists who will guide you through [diagnosis](#), [treatment](#), and recovery. They are all experts in your specific type of cancer.

Your diagnosis and treatment plan reflect the collective expertise of your team of world-class doctors. Their specialties range from [surgery](#), chemotherapy, and [radiation therapy](#) to [imaging](#) and [pathology](#). Our highly trained oncology nurses, nurse practitioners, and clinical nurse specialists work closely with your doctors and will be an essential part of your team.

## **We Care for the Whole Person**

We're a comprehensive cancer center. This means you'll have access to a wide range of services, including sexual health and fertility, psychiatrists and psychologists, specialists, and art therapists.
