www.mskcc.org/dermoscopy2016
Memorial Sloan Kettering Skin Cancer Center (MSK) Hauppauge provides state-of-the-art skin cancer care in a location that is convenient for residents of Long Island. Our doctors are experts in skin cancer screening and treatment for squamous cell carcinoma, basal cell carcinoma, melanoma, and other types of skin cancer.

The main priorities of the Department of Dermatology, University Hospital of Zürich, Switzerland, are malignant melanoma and inflammatory skin diseases such as psoriasis and atopic dermatitis, as well as other, rarer skin conditions.

Skin and Cancer Associates (SCA) and the Center for Cosmetic Enhancement® (CCE) is a private dermatology group comprised of 80 Dermatologists, Nurse Practitioner’s and Physician’s Assistants at more than 25 locations in Florida.
Course Overview

Dermoscopy permits the observer to visualize skin structures located below the stratum corneum that are not visible to the unaided eye. The morphology visualized through dermoscopy has led to improved clinical diagnostic accuracy with increased sensitivity and specificity for the detection of cutaneous malignancies.

EDUCATIONAL OBJECTIVES

As a result of participating in this activity, participants should be able to:

- Outline a logical and easy to follow framework for the dermoscopic evaluation of cutaneous lesions.
- Identify the features of both melanocytic and non-melanocytic lesions.
- Describe a management approach, based on dermoscopic findings, to correctly identify lesions requiring biopsy.

TARGET AUDIENCE

This educational activity is designed for Dermatologists, Family Physicians, General Internists, Nurse Practitioners and Physician Assistants.
