# DERMATOLOGIC CARE IN ONCOLOGY SYMPOSIUM

## TARGET AUDIENCE

This course is directed towards Dermatologists, Oncologists, and Oncology Nurses.

## COURSE OVERVIEW

Chemotherapy, radiation, and therapeutic transplants have resulted in remarkable improvements in patient survival. Despite this remarkable success, the majority of treated patients will develop dermatologic adverse events, which lead to decreased quality of life and inconsistent antineoplastic regimens, both of which may affect clinical outcome. Therefore, attentive dermatologic care is critical for the optimization of anticancer therapies.
